SPEED GOVERNORS ARE SUGGESTED

There has been a great deal of interest in the question of speed governors, and many persons have suggested that governors be placed on all automobiles or on the automo-

biles of certain drivers as a means of preventing accidents.

The ordinary type of governor does not react to the speed of the automobile, but to the speed of the motor instead. Thus when the automobile is governed at 50 miles per hour in high gear, it will have a top speed of about 25 miles per hour in second gear and about 15 miles per hour in low gear. The governor itself is a small device through which the mixture of gasoline and air must pass before reaching the cylinders, and when this mixture reaches a certain velocity it partially closes a small valve, thus reducing the amount of gasoline which is being fed to the motor. In this way the speed of the car is held at a certain maximum, except when it is going down hill.

PLAN YOUR VACATION via

AIR CONDITIONED BUSES
 ALL AIR FILTERED, DEHUMIDIFIED, DEODORIZED AND REFRIGERATED

WORLD'S FIRST FLEET NOW IN SERVICE!

HALF THE FUN of your vacation this year will be the trip by air-conditioned bus! No matter how sidewalks sizzle or heat waves dance across the fields, it will be just like spring inside your comfort-cooled coach.

Special filters remove dust, dirt, smoke, odors and pollen from the air. Excess moisture is also removed, and the air is cooled to just the right degree for perfect comfort. Gentle, no-draft circulation changes the air completely every 3 minutes. Traveling this cool, comfortable way, you'll have a lot more pep throughout your trip, and you'll arrive rested and refreshed. Clothes stay cleaner and fresher, too.

Plan now to make your vacation trip this cool, clean, low-cost way!

UNION PACIFIC STAGES

This year, take an **EXPENSE-PAID TOUR**

Have more fun this vacation—save money—and forget bothersome details—by taking an Expense-Paid Tour! Bus transportation there and back—hotel rooms (reserved at every stop-over)—and sight-seeing tours covering major points of interest are all included in your low-cost Tour. Ask the local agent for a descriptive folder and full details—or write to Interstate Transit Lines, Omaha, Neb.

TREES SHOOTING UP IN ARID SECTION

Increase Rapidly in Size With Little Care.

Dalhart, Texas.—Tree planting on the Great Plains should result in a decline in the ravages from wind and dust, Charles van Gorder believes.

Van Gorder is forester for an experimental project near Dalhart for the oil conservation service. During the three years since the project was originated, at the height of the dust plague, tiny trees have grown into 12-foot saplings. Of 13,000 trees planted and receiving "minimum care" for test purposes, 80 per cent have survived.

Survivals range downward from the 94 per cent of the thorny honey locust. One Russian mulberry has grown since 1935 from 18 inches to 11 feet in height.

Little Care Required.

"The high percentages of survivals indicates that trees will live in this semiarid area with a minimum of care," said Van Gorder. "It has been shown that trees can be grown into excellent windbreaks within a short time. Suitable planting and a few timely cultivations each year furnish the keynote to successful tree planting in what once was the center of the Dust Bowl."

Principal experiments in use of trees on the plains have been with farmstead and field border windbreaks. The farmstead type usually consists of three rows of trees planted on the north and west sides of a farm home and other buildings to break some saving on fuel in addition to lessening the wind's force. Such windbreaks for farm animals also increase their value and make their feeding more profitable.

Single Row Breaks Wind.

The field border windbreaks are a single row of trees, planted around the edge of a field to reduce drifting of the top soil.

Since most wind erosion on the plains is started by loose earth on the fields' edge, the border trees reduce such damage materially. Van Gorder also revealed that the row of 5-year-old trees disrupted the force of straight winds and directed the force upward past the vulnerable portions of the field.

Minimum care given the trees consists of digging diversion ditches to concentrate and hold the water from rainfall. Sometimes the water is diverted from roadside ditches. Van Gorder also recommends occasional cultivation of the trees.

American Rural Women Sew Less, Survey Shows

Ames, Iowa.—Modern rural America apparently is forsaking the sewing machine as a means of making clothing, just as another generation abandoned the spinning wheel, according to a survey of 1,031 Iowa farm women.

The survey, reported by Miss Elizabeth Peterson, clothing specialist, disclosed that 80 per cent of the clothing worn by the farm women was ready-made. Only 40 per cent of all dresses worn were made on the family sewing machine and most of these were cotton house dresses, Miss Peterson said.

Only 6 per cent of the coats and 11 per cent of the underwear were homemade, according to the survey. The clothing specialist reported that 62 per cent of all dresses worn were cotton. The same was true for hose, indicating that farm women do not risk hazards of "runners" and save silk hose for special occasions.

The women averaged seven pairs of hose a year, spending only \$4 on them. Of an average expenditure of \$84 for each of the 1,031 women, \$17 was spent for dresses and the same amount for coats. They averaged two or three silk or rayon dresses each, six cotton and one wool.

An average of \$2.33 was allotted annually by each of the women for their "beauty budgets," which included such items as permanent waves, haircuts and cosmetics.

Men Make the Best Tea, Canadian Expert Says

Vancouver.—F. E. B. Gourlay, chief Canadian commissioner of the market expansion bureau, questions housewives' supremacy as tea makers.

Gourlay, who was a tea planter in Ceylon before coming to Canada to direct empire marketing operations in the dominion, said that men are more conservative and therefore more likely to follow directions. "They buy differently, too," said Gourlay. "As a rule a man doesn't 'shop.' He knows what he wants, buys it and that's that."

Iced tea, so popular in North America, is rapidly taking hold in England, he said.

Change Road Markers to Town's Confusion

Churubusco, Ind.—Perplexed Churubusco citizens are saving the mapmaker's face but get nothing in return except a daily horde of "lost" motorists.

Since markers along Indiana State Road No. 2 have been replaced with signs designating the route as U. S. Highway No. 33, puzzled motorists have stopped here to inquire their whereabouts.

SALAD BOWL
 Lettuce
 Cooked peas
 Cooked cauliflower
 Cooked green beans
 Cooked carrots
 Radishes
 Tomatoes
 Watercress
 Miracle Whip Salad Dressing

Line a salad bowl with crisp lettuce. Then in separate lettuce cups put generous portions of peas, cauliflower flowerets, Julienne green beans, Julienne carrots, sliced radishes and sliced tomatoes. Place these filled lettuce cups around the rim of the bowl, and fill the center with watercress. Serve with Miracle Whip Salad Dressing.

PANCAKES

- Mix milk or water with an equal amount of Aunt Jemima Ready-Mix for Pancakes. In a twinkling the batter is ready.
- Have griddle or skillet just hot enough. To test, put a drop of water on griddle. If it goes right up in a puff of steam, griddle is too hot. If it bounces around a second before evaporating, griddle is hot enough.
- Grease griddle, very lightly. Don't pour grease on griddle. Spread it thinly with pad.
- Pour batter onto griddle. Let each side bake until a golden brown. Never pat cakes.

Did You Know That—

- Sun-bathing often is harmful to patients with pulmonary tuberculosis?
- There usually are no signs or symptoms in early tuberculosis?
- When the symptoms of fatigue, cough, indigestion, loss of weight or chest pains appear, tuberculosis has already gotten a good start?
- Tuberculosis is being cured in all climates?
- In large cities, about 50% of adults are infected with tuberculosis, but comparatively few develop the disease?
- Tuberculosis is not inherited? One gets it by contact with germ spreaders?
- The X-ray is the most effective means of showing the condition of the lungs?
- Tuberculosis is the leading cause of death between the ages of 15 and 45?
- It kills more people in this age group than any other disease?
- Early tuberculosis is difficult to diagnose but easy to cure; advanced tuberculosis is easy to diagnose but difficult to cure?

ROADMAN
 By Maryetta Thomas

The annual May Day Festival was held at Heppner Friday, and the grade school was taken over in the buses. The seventh and eighth grades came in second in the track meet. The first and second grades entered the rhythm band contest.

Mrs. J. Gorham and daughters Janet and Mardell motored to Pendleton Monday.

Mrs. Gregg, who has been visiting her mother, Mrs. McCutchen, left
