Bob McKenzie and Ernest Tippie motored to Portland Monday evening. Tippie went on to his home in Davis, Cal., but McKenzie will return in a few days.

Ray McNabb is redecorating the Buletin house. Miss Rix and Miss Bulyer will live in this winter.

Gene Hiatt returned home Tuesday from Pendleton where he was working in the pea cannery.

FARM TOPICS

SANITARY SYSTEM HALTS MILK LOSS

Extreme Care Is Urged in Cleanliness of Cows.

By John A. Arey, Extension Dairyman, North Carolina State College, WNU Service.

Dairymen lose thousands of dollars each summer as a result of not handling their milk properly. Because milk is so easily contaminated, every person connected with its handling should be clean in his methods. When drawn from healthy cows, few bacteria may be found in it.

Milk souring is caused by bacteria changing milk sugar into lactic acid. It is impossible to remove these bacteria by straining, as many people think.

Milk receives most of its contamination from the body of the cow during milking. Therefore, it is essential that all parts of the animal's body be kept clean and well-groomed.

Then, too, the milker's hands may be a source of contamination, so they should be clean and dry during the milking process.

Small top pails have proven effective in cutting down the number of bacteria that enter while the cow is being milked. Dairymen should recognize this type of container as one of the easiest and cheapest means at his disposal for producing good milk.

All containers used in handling milk should be of metal with all corners and seams completely filled with solder. To clean these containers thoroughly they should first be rinsed in lukewarm water, then scrubbed with a brush in water of the same temperature as that in the rinsing process to which a good alkali washing powder has been added. After washing, sterilize with steam and store in a clean dry place.

Milk should be cooled immediately after the milking process and held at a temperature of below 60 degrees Fahrenheit.

Horses Need Water, Salt

Water and salt enable horses to do more work in the summer.

A drink of water every hour in the field in hot weather, all the loose salt the horses want at the barn or in the pasture at night, and reasonable attention by the driver enable horses to work steadily on very hot days, advises a writer in Hoard's Dairyman.

Even colts demand special attention during summer months. Foals from work mares work too hard if they follow in the field. A foal grows better when kept in the barn during the day and turned on pasture with the mare at night. A good plan is to bring the mare in for nursing in the middle of the morning and afternoon while the foal is young.

The proper care of the horse's feet to prevent lameness is always of paramount importance as a lame horse is not a serviceable horse. Feet should be trimmed regularly, and excessive growth should be removed to prevent breaking high, thus causing the horse to become tender and to prevent both toe and quarter cracks.

Eight Breeds of Swine

In the United States there are two distinct classes of swine, the breeds of the lard type and of the bacon type. The plan of feeding has much to do with the class of market hogs produced. As an example, less corn and more oat and barley meal in the ration produces bacon, rather than lard in young hogs. The hogs known as lard breeds are Duroc, Jersey, Poland China, Chester White, Berkshire, Hampshire and Spotted Poland China. Those known as the true bacon breeds are the Tamworth and Yorkshire. These last named are not the only hogs that are producing our bacon.

Starting Mash for Turkeys

Turkey growers may use home produced or purchase farm grown grains for a starting mash, if they are balanced with a good protein supplement, says a St. Paul university farm authority. Following is a starter recipe that can be mixed on the farm, provided all ingredients (expressed in pounds) are included: corn 21, wheat bran 10, flour mids 15, ground oats or barley 10, alfalfa leaf meal 15, meat scrap 20, soybean oil meal 10, dried milk 5, salt 1, oyster shell 1, and cod liver oil 2.

Water Held by Corn Land

Soils used for producing a three-year rotation of corn, oats and red clover hold 15,000 more gallons of water per acre than if the same soils are used to produce corn continuously without any fertilizer, it is reported by the South Dakota experiment station. If lime, manure and phosphate are used with the crop rotation, the soil will hold 46,500 more gallons of water per acre than when corn is grown continuously.

BOARDMAN

By Maryetta Thomas

Mr. and Mrs. R. Brown and Mrs. B. Shannon spent Thursday in Hermiston.

Mrs. Ray Brown left Friday for La Grande where she will visit her daughter Mrs. E. Wilson.

Mr. and Mrs. J. Allen and Mrs. Crystal Barlow and daughter Chloe returned Saturday from Wallowa lake where they had spent several days.

Mr. and Mrs. W. Baker and Mrs. B. Shannon spent the week end at Wallowa lake.

Mr. and Mrs. E. T. Messenger and daughter Lois left Saturday for Los Angeles where they will visit relatives.

Margaret Myers left Saturday for Pendleton where she will spend the week end visiting her sister Wilma Myers.

Ingard Skoubo, who injured his arm when it caught in a threshing machine belt Saturday, was taken to Pendleton for medical attention and will remain for a week. His arm was broken in two places.

Mr. and Mrs. L. Root and Mr. and Mrs. E. Barlow and daughter Carma motored to Athena Sunday where they visited Vernon Root.

Mildred Myers left Sunday for Portland, where she will be in nurses training at St. Vincent's hospital.

John Partlow motored to Pendleton Sunday.

Don Strobel and Pauline Strobel left Sunday for their home in Athena. They were visiting in Boardman for a few days.

Tom Hartley of Touchet visited at the H. B. Thomas home Monday while on his way to Salem.

Stanten Hadley returned from Stevens, Wn., Monday where he has been visiting with the McDermid family.

Miss Norma Gibbons, who has been attending summer school at Eugene, returned to Boardman Saturday where she will remain until her school starts at Springfield.

Naomi Black of Corvallis accompanied Miss Gibbons and will visit on the project for a few days.

Mrs. E. Cramer of Klamath Falls spent Saturday visiting at the F. Cramer home.

ADMINISTRATION BUILDING NEARS COMPLETION

With the \$11,000 administration building of the Oregon State Fair practically completed, Leo G. Spitzbart, manager, moved into his new office at the Salem fair grounds last week.

The new building houses the latest facilities and conveniences within its 40 by 90 feet of cream-colored, stuccoed walls. Visitors to the annual event will find a small radio broadcasting booth and an adjacent reception room, all sound-proofed, one of the features of the structure. In addition, press rooms, a first aid station, telephone and telegraph headquarters and all administrative offices are included.

Erected under a Works Progress Administration grant, the building is semi-modernistic in design and provides permanent, centrally-located offices.

See Oregon!

To stimulate interest in travel to Oregon's many famous beauty spots, hundreds of thousands of full-color reproductions of the state's most famous scenes will be distributed free within the next few weeks by the Standard Oil company of California. Motorists may obtain these pictures by asking for them at any Standard Station or Standard Oil dealer in the state of Oregon. Rose Queen Frances II, queen of the 1938 Portland Rose Festival, receives a framed copy of the very first picture to be given away, a beautiful natural color reproduction of Crater Lake. Edward Dow, special emissary from Standard makes the presentation.

World's Poultry Congress Comes to the U. S. A. for the First Time

The World's Poultry Congress which meets every third year comes to Cleveland, Ohio, July 28 to August 7, 1939. This is the first meeting ever held in the United States and probably those active in the poultry industry will all be gone before it comes back again. About 60 nations usually participate in the Congress. Every operation in the industry from nest to table will be shown. Every known breed of fowl will be on display. Scientists from all parts of the world will participate. Over 20 acres under roof will be utilized to house the exhibits. The building upper left in the above picture is the Hall of Youth for the junior activities. Also is shown the Cleveland Public Auditorium, exterior and interior, where many meetings will be held and where part of the exhibit will be housed. The two visitors shown are a Polish fowl and a Japanese long tailed chicken. A membership costing only \$1.00 entitles the visitor to attend eleven days of this Congress. These memberships must be bought in advance.

Round-Up Queen Invites World

Pendleton, Ore., July 22.—From the saddle of a rearing bronc, Jean McCarty, queen of the 1938 Round-Up, invites the world to the twenty-ninth annual performance, at Pendleton, Oregon, Sept. 15, 16, 17.

Daughter of Mr. and Mrs. Eddie McCarty, Chugwater, Wyoming, Jean, now 20, has since childhood been trained to the saddle on her father's ranch. Mr. McCarty is a member of the firm of McCarty & Elliott, rodeo contractors, and he with his partner, Verne Elliott, brings stock to the Round-Up every year. Mr. McCarty first coming here for the 1913 show.

Jean, blonde, with hazel eyes, is of slight build; five feet four in height, she weighs 110 pounds. She has attended the University of Wyoming for two years and is a member of Pi Beta Phi sorority. Her sister, Helen McCarty, will be queen of the Cheyenne Frontier Days show this year.
