"It takes 5 minutes to adjust the clutch, 15 minutes to reline it."

THE clutch on a John Deere General Purpose Tractor is in the belt pulley—and is instantly accessible. It can be adjusted in 5 minutes or less, simply by removing the cover plate and tightening three nuts. The entire job of relining can be done in 15 minutes, at a total cost of about three dollars. The John Deere clutch is the hand-operated, dry-plate type, and it picks up the load gradually and smoothly. You can operate the clutch when standing on the ground. This same accessibility and ease of adjustment on the John Deere Tractor apply to all its parts.
