Lumber!

Some weeks ago we announced through the Herald that we were going to sell out and quit, but so many have been the requests that we go ahead with our plans here that we have decided to do so, and after looking at several available sites, we selected a tract just north of the high school grounds which we have purchased from Mr. and Mrs. W. J. Warner.

On this we expect to build, besides an office and lumber storage sheds, a planing mill and perhaps a small saw mill. This plant will be managed by F. M. Cox who has had years of experience in both the lumber and building business, and will be glad to help you with plans that will enable you to get the most value possible out of every dollar you put into your buildings.

Watch for our ads as we will have prices to offer that will be pleasant to look in view of the recent price advances of lumber and other building materials.

JOHN DEERE

"It takes 5 minutes to adjust the clutch, 15 minutes to reline it."

THE clutch on a John Deere General Purpose Tractor is in the belt pulley—and is instantly accessible. It can be adjusted in 5 minutes or less, simply by removing the cover plate and tightening three nuts. The entire job of relining can be done in 15 minutes, at a total cost of about three dollars. The John Deere clutch is the hand-operated, dry-plate type, and it picks up the load gradually and smoothly. You can operate the clutch when standing on the ground. This same accessibility and ease of adjustment on the John Deere Tractor apply to all its parts.
