A GREAT AMERICAN ANNIVERSARY

Next week all America is celebrating the 30th anniversary of the establishment of the Boy Scout movement in America. The movement has its enthusiastic supporters everywhere. Indeed in three decades nearly 9,000,000 Americans have been scouts, cubs and leaders. Today there are over 1,330,000 boys and men actively enrolled.

Now as never before, American adults are giving their time, energies and financial support to time-tested boys and girls organizations that help mold their children into types of citizens that will guarantee the continued existence of the United States along the pattern set by the nation's founders who gave America its democratic form of government and its precious heritage, the Constitution and its Bill of Rights.

Supplementing existing organizations such as the home, church and school, the Boy Scouts of America engages boys' leisure-time energies in outdoor life and activities of cultural and practical values which lead boys to become dependable men.

Every President of the United States since William Howard Taft has been an enthusiastic supporter of Scouting and every American who knows anything about Scouting's beneficial program acknowledges it as worthy of continued confidence and trust.

BOARDMAN NEWS

By Ruth Fisher

Essie Jones went to La Grande Tuesday where she will take a course in beauty work.

Wm. Dent returned from Hermiston where he has been employed and will soon leave for Walla Walla where he will reside.

Mr. and Mrs. Almon Geiss and Mrs. H. Ford drove to Pendleton Saturday.

Robert Wilson had the misfortune to have his finger nearly cut off some time ago and went to Heppner Saturday for medical treatment.

Mr. Hango, who has been seriously ill, passed away in Portland Thursday morning. The funeral was held in Portland.

The basketball team goes to Hermiston Tuesday evening where they will play the Hermiston team.

"It takes 5 minutes to adjust the clutch, 15 minutes to reline it."

THE clutch on a John Deere General Purpose Tractor is in the belt pulley—and is instantly accessible. It can be adjusted in 5 minutes or less, simply by removing the cover plate and tightening three nuts. The entire job of relining can be done in 15 minutes, at a total cost of about three dollars. The John Deere clutch is the hand-operated, dry-plate type, and it picks up the load gradually and smoothly. You can operate the clutch when standing on the ground. This same accessibility and ease of adjustment on the John Deere Tractor apply to all its parts.

FEATURES

- Simple, rugged, two-cylinder engine
- Designed to burn low-cost fuels with outstanding economy
- Thermo-siphon temperature control
- Belt pulley on the crankshaft—full engine power to belt
- Rear wheels adjustable from 56 to 84 inches
- Hydraulic power lift.

SANITATION RETAINS GOOD MILK FLAVOR

Careless Handling May Result in Contamination.

By PROF. H. A. HERMAN
The application of modern knowledge and sanitary methods enable the dairy producer and distributor to protect the fine flavors of milk which meet the favor of the consumer according to research at the Missouri college of agriculture.

Bacteria may cause changes in the flavor of milk. Contamination of the milk by bacteria may come from careless handling of the milk or milk utensils, at any or all stages from the cow to the consumer. Strict cleanliness, proper cleansing and sterilization of utensils, and holding milk at low temperature will eliminate most bad flavors due to bacterial contamination.

The exposure of milk to rays of the sun seriously affects its flavor. The presence of iron or copper salts with the action of sunlight causes a speedier action than would otherwise take place. The type of off-flavor developing in this instance is usually described as "tallowy," "cardboard," "metallic," or "stringent." The use of poorly tinned milk cans, buckets, coolers, or vats is responsible for many off-flavors and in addition add copper and iron salts to the milk, which aids in developing the flavors associated with exposure to sunlight.

Washing compounds or chemical disinfectants, if carelessly used, may be responsible for the addition of foreign flavors. It is recommended that only readily soluble, free-rinsing cleaners free from odors, be used for milk utensils. Chemical disinfectants such as chlorine solutions used according to directions cause little trouble.

After the milk is drawn, unless the strictest care and cleanliness are exercised, various off-flavors may be acquired.

Pasture Development Pays Good Dividends

Good pastures are good business for the farmer. In seven different districts of the country where the United States department of agriculture studied feed requirements for market milk production, pasture furnished nearly one-third of all feed, but was only one-seventh of the feed cost. On 478 corn belt farms, pasture furnished more than one-half the feed for beef cattle, but was only one-third of the total feed bill.

Because good pastures are a good investment, the AAA is helping many farmers in the northeastern, east central and a number of southern states to improve pastures with lime and superphosphate. In these regions, farmers may pay for lime and superphosphate with the conservation payments they earn for carrying out soil-building and soil-conserving practices. The farmers obtain the soil-building materials with the understanding that they use them to improve their pastures.

Farmers with depleted permanent pastures have found lime and superphosphate of particular value, for they aid desirable grasses and legumes in driving out and replacing weeds and poorer grasses.

Bin Capacity

One bushel of grain contains 1.25 cubic feet. One cubic foot contains .8 of a bushel. One bushel ear corn contains 2 1/2 cubic feet. The floor area in square feet multiplied by 8, and this product divided by 10 gives the number of bushels in one foot height of bin.

A circular bin is measured as follows: The radius (one-half of the distance across) multiplied by the radius, multiplied by 22, and this figure divided by 7 will give you the cubic feet in one foot height. One cubic foot equals 7 1/2 gallons, and one bushel equals 8 3/4 or 8.375 gallons.

Farming Briefs

Terraces not only save soil, but are much less objectionable to cross than gullies.

If the combine or binder is greased and put away in good shape, it will be "ready for business" when next year's crop comes on.

One of the easiest sports to establish almost anywhere is quilts or horseshoe pitching. Perhaps a twilight "barnyard golf" league might be popular among both old and young folks in a neighborhood.

Farm workers in Germany can quit their jobs because of a recent order issued by Hitler. Farm owners cannot work elsewhere than on their own farms without official permission. Farmers and workers seem to be the chief sufferers from Fascism.

Where contour farming is practiced this leaves short rows, and sometimes small areas in a field that are not cultivated. Farmers are now using electric fences to capture these odd-shaped areas.

STANFIELD NEWS

By Mrs. J. M. Richards

The Stanfield-Echo Home Economics unit met Friday for the first time since September. Mrs. Dorothy Bishop led the discussion on "Understanding Our Families." The subject for demonstration on February 23 will be "Floor Finishes."

The sewing committee of the Ladies Aid held a busy session Thursday when several quilts were tied before and after the afternoon aid meeting. The ladies took time off to do justice to a tasty pot luck lunch at noon. Mrs. W. G. Wallace had charge of the missionary meeting at 2:30 when Rev. and Mrs. J. K. Griffiths talked on China and other phases of work among missions. Following this the business meeting was conducted by Mrs. G. E. Great-house, president. Mrs. J. F. Lane served during the tea hour. Hostesses for the February 8th meeting are Mrs. S. P. Smith and Mrs. H. P. Bonnewitz.

Funeral services for William Kenneth, infant son of Mr. and Mrs. Kenneth Gregory, were held at the William Kryger home Saturday afternoon, January 27. Rev. C. Warner of Hermiston conducted the services with music by Neva Hedrick and the Misses Marie and Josephine Rhea. The baby, born January 24, contracted pneumonia and was rushed to Portland by plane Thursday night where every effort was made to save his life. He passed away a few hours after reaching the Doernbecher hospital.

Mrs. Grady Christopher and infant daughter Barbara Nadine, have returned from the Hermiston hospital and are at the home of her parents, Mr. and Mrs. Pete Beamer.

Mrs. Kenneth Gregory came home from the Hermiston hospital Sunday.

Mrs. Harry McCormick left Monday for Los Angeles to visit her mother who has been ill.

Mrs. Carl Rhea was hostess to the Pollyanna club at her home Wednesday afternoon.

John Korvola of Pendleton recently assisted his sister, Mrs. Velma Tenny, move her household goods from the farm to the Bottger house.

Mr. and Mrs. Lloyd Russell of Portland were week end guests at the Roy Penney home.

Masons and their families will hold their annual beef steak dinner on Friday, February 2, in the church basement. This event is held on ground hog day each year.

IRRIGON NEWS ITEMS

By Mrs. W. C. Isom

Mrs. Jack Browning and son Bobby returned Friday night from Centralia, Wn., where they were called by the illness of Mrs. Browning's father, who passed away after her arrival.

Five Responsibilities we have as a Commercial Bank!

As a commercial bank this institution recognizes its responsibilities to the following groups of people:

1. To our depositors, whose funds are entrusted to our care.
2. To our borrowers, to whom we have advanced credit.
3. To our stockholders, whose money provides the bank's capital.
4. To our community, which benefits by the sound growth and capable management of this bank.
5. To our officers and our employees.

Though different in many respects our responsibilities to these groups are basically similar. The eternal principle that banking is a trusteeship is the bedrock upon which every policy and action of this bank is founded. It guides us in our daily work of serving the financial needs of the people in this community.
