

The Cooperative Ideal

of ECONOMIC DEMOCRACY is growing and will grow with the years. Thinking people realize that the need for Economic Democracy is as great as the need for Political Democracy. In order to be greatly successful the two must go together. To be effective in furthering man's pursuit of life, liberty and happiness, and in securing man's unalienable rights we must ever strive for a larger attainment toward Economic Democracy as well as cherish and guard our political democratic processes and rights.

Consumer cooperatives especially are a practical application of real Democratic and Christian principles to the business of distributing goods and services.

GARDEN CLUB CHATS

By Mrs. Thomas O'Grady

A garden friend recently wrote that each month she has made a study of one flower and has learned to know that flower. She studies its cultural needs, the different varieties, colors and its standard of perfection. She reads all she can find in magazines and garden books. At the end of the month she has made this plant a real part of her garden vocabulary. This seems to us to be a very practical method and one which this club might follow with good results.

It is very difficult this warm weather to keep cut flowers but if a few simple rules are followed they will keep much better. An article in "Your Garden and Home" gives the following advice: "It is essential not to gather the flowers in the hot sun. Gather in the cool of the evening and have a pail of water on the garden path and as you gather your blooms, hurry each cut stem deep into it and carry the pail back to the house and to darkness. There should be no pause between the cutting and the drink. In the case of Oriental poppies, dahlias, zinnias, hollyhocks or other flowers having coarse heavy stems, char the ends of the stalks with the flame from a candle or the gas burner before putting them in the water. Never place flowers in a draft or where the sun can shine upon them."

Sherrard says to take the shoot from where it joins the plant but to select one which has leaves but no flower stalks and place in damp sand in a cool shaded place for several days. They slip quite easily.

Next meeting is June 28. It is nice and cool in the basement of the library. We hope you can come.

F. B. AUXILIARY PLANS FOR SOCIAL

The Farm Bureau auxiliary met Friday, June 21, at the Columbia park with a pot luck dinner being served at noon. A committee was appointed to take charge of the making of ice cream for the social to be held in the new club room Friday, July 19, at 8:00 o'clock with the public invited.

The following committees were appointed: ice cream, Mrs. Jessie Corman, Mrs. Doris Mikesell and Mrs. Ethel Hughes; program, Mrs. Emma Hutchison and Mrs. Fern Zivney.

The proceeds of the social will go towards completing the club room. The west gate will be used where there is plenty of parking space. Tables are available for picnics at the park at the present time, and will be found near the club house.

CENTRAL CHURCH OF CHRIST

C. Warner, Pastor
The regular services will be held Sunday morning, Sunday School at 10 and regular morning worship service at 11. The pastor will be out of town but Ralph Neill will fill the pulpit for the morning worship service.

At the evening service, Cecil Ray Warner, the pastor's son, now a student in Northwest Christian Bible college, will preach.

You will enjoy the messages by these young men. A welcome awaits you.

METHODIST CHURCH

Stearns Cushing, Pastor
With a great deal of the world's population under the iron hand rule of a dictator, the coming celebration of Independence day takes on added significance for the Christian community. "What is Freedom?" This will be the theme for the Sunday morning service. Can one be wholly Christian under an unchristian government? You are invited to join with us in our worship services. You will find a particular message for your needs.

PENTECOSTAL TABERNACLE

Rev. E. D. Greeley, Pastor
Our Bible school convenes at 10 a. m. An interesting service for children and all. The preaching service is at 11 A. M., with simple, wholesome and scriptural exposition of Jesus Christ The Lord. An evening meeting is at 8, preceded by a lively inspiring song service. The pure gospel will be briefly ministered. Your presence at these services is sincerely desired for we believe you will be helped in every way. "Come thou and all thine house."

Rohrman Sells School Buses

Rohrman Motor Company, local Ford dealer, was recently awarded the contract to furnish the Boardman school district with two new buses. The buses will have Bender bodies and will be mounted on special Ford school bus chassis equipped with 95 h. p. Mercury dry sleeve motors. These two units will be driven out from Elyria, Ohio. Rohrman was awarded the business on a competitive bid basis.

Sail For French Indo China

Mr. and Mrs. Richard Hammill left Sunday for Seattle, after a week's visit with his parents, Mr. and Mrs. Henry Hammill. They plan to sail for French Indo China July 1, where they will continue their ministerial work for six years. Both Mr. and Mrs. Hammill are graduates of Walla Walla college, and have been living in Port Angeles for the past four years.

Lodge Man Visits At Umatilla

J. J. Walker, past grand master of the Odd Fellows lodge for the state of Idaho, and his wife spent Wednesday and Thursday of last week visiting their old friends, Mr. and Mrs. Del Jackson of Umatilla. Mr. Walker plans to attend Sovereign Grand Lodge in West Virginia this fall. They were en route to Albany and coast points.

Umatilla Bible School Closes

The Bible school at Umatilla has been in session for the past two weeks with a good attendance and much interest. Mrs. J. Byrnes has been superintendent and has been assisted by Rev. and Mrs. John K. Walpole and an able staff of teachers. The closing program will be at the community hall Friday night at 8 o'clock, at the close of which the Ladies Aid will serve a 15c lunch.

FARM TOPICS

INSULATED BARN MAY BE DRAFTY

Ventilation Problems Must Be Closely Watched.

By E. R. GROSS

Although insulated animal shelters represent a great improvement over old-time, drafty farm structures, insulated structures may develop moisture conditions more prominent than those in a leaky building. For this reason, farmers are urged to study the ventilation problems in their barns and shelters before insulating them.

The day will undoubtedly come when insulated farm structures will be the rule rather than the exception. Insulation for farm buildings is not new, agricultural studies at Rutgers university reveal. The use of sawdust in the ice house is a good example of its early use. Now that farmers are better acquainted with the materials and how to use them and because insulation is now more readily available and reasonable in cost, more farm buildings are being insulated than ever.

Generally speaking, it pays to insulate animal shelters. Insulation reduces the rate of heat loss from the building, hence should make it warmer and more comfortable for the live stock. Suppose, however, that cracks around windows and doors allow air leakage causing a greater heat loss than that through the walls themselves. Under these conditions, insulating the wall will do little good and is not advisable unless the doors and windows are also repaired to prevent air leaks. This sort of reasoning must be applied to poultry houses, dairy stables, hog houses, horse barns and the like.

Early farm structures made of barn boards and battens had cracks allowing ample ventilation of its kind. The stock lived under reasonably healthful conditions although often at quite low temperatures. Tighter walls resulted in less air movement with consequent condensation on walls and ceiling indicating the need for ventilation. So we see that the use of insulation amplifies the ventilation problem and that the volume of air required for ventilation is so great that the flues must be very large.

Better Grass Strains

Grass breeding is "catching up" with research on other economically important plant crops, reports M. A. Hein, pasture specialist of the federal bureau of plant industry. Grass long has been recognized as the cheapest of live stock feeds, but until recently little attention was given to better grass strains through breeding. Department forage specialists co-operating with various state experiment stations have shown that grasses can be improved by breeding as much as field crops.

Recent studies, for instance, show that length of day, light intensities, air and soil temperatures all play an important part in grass growth. How to induce and increase the production of grass seed, particularly in the Southeast and the Great Plains where many of the more desirable and most promising grasses fail to produce any quantity of viable seed, is another problem that the scientists want to know more about. Why some grasses are more palatable and higher in nutritive value than others also is being studied.

To carry out grass studies as rapidly as possible, the country has been divided into regions where there is a similarity in the problems and consequently in the methods of attack. Adaptation studies of large numbers of domestic and foreign grass species are made at nurseries in the various regions. In this preliminary work studies are made of the palatability and the reaction of the introduced grasses to grazing. As far as possible those that fail to show promise in this initial phase of the breeding program are eliminated.

R. E. A. Dollars

For each dollar loaned by the Rural Electrification administration to bring central station service to farm communities, the farmer spends approximately another dollar for wiring and appliances so as to take advantage of the energy brought to his home, REA records show. Available electricity creates a demand for radios, irons, washing machines, water pumps, vacuum cleaners, and many other items that bring comfort and entertainment to the farm home and employment to industry.

Skimmed Milk

All farmers know that skimmed milk is a good feed for pigs, but many people do not know just what its feeding value is. Skimmed milk, and buttermilk too, are both deficient in vitamins A and D and in iron. Vitamin D, which aids in the assimilation of minerals, is supplied by the sun. Vitamin A and other vitamins, proteins and minerals, including iron, are supplied by good pasture, and to some extent by green, leafy legume hay.
