WESTLAND GRANGE H. E. C. MEETS

The Westland Grange Home Economics club met at the home of Mrs. Guy Shaw March 26. In as much as farm women are especially busy at this time of the year, it was decided to hold meetings only once each month from April to August inclusive. The next meeting will be held at the home of Mrs. P. A. Power April 9. Other regular meetings will be on the Wednesday preceding the second Thursday of each month.

Mrs. Mabel Corliss, chairman, urges that each member be present at the next meeting and to bring a friend. The club also sends greetings to the two or three members who have not been coming regularly and hope to see everyone present at the April 9 meeting.

THEY FOUND
90 extra miles an hour
IN A DROP OF OIL

In a drop of crude oil, scientists at the "University of Petroleum" (Shell's \$3,500,000 research laboratories) see a universe of possibilities—wonders already realized and greater miracles yet to come.

They discovered how to produce iso-octane, on a commercial scale, from a waste petroleum gas. This was the key to 100-octane fuel for aviation which led to an increase up to 30% in the speed and flying range of planes!

Because Shell scientists saw extra miles in a drop of oil, and were able to get them out.

YOU GET THIS RESEARCH "BY THE GALLON"
IN NEW Solutized SHELL

Synthetic rubber — glycerine — plastics — fertilizers — germicides — even T. N. T. — are among the many achievements of the 821 research scientists and assistants at the "University of Petroleum."

Now they've advanced the Road Performance Rating of Shell Gasoline to an all-time high:

1. It is refined with the Solutizer Process (Patent No. 2,149,379). This steps up performance by removing the "pro-knock mercaptans" which have always been a drag on performance.
2. Thermal conversion makes it extra rich in iso-compounds similar to those in aviation gasoline.
