America says "keep 'em flying." But to keep 'em flying we must keep 'em rolling—on the rails. Materials, thousands of carloads, for planes, tanks and guns must be rushed to production and assembly plants. Completed armament also must be transported.

Union Pacific is powered to do the job. Twenty "Big Boys," largest steam locomotives ever built, have recently been added to the large fleet of other super-powered rail giants placed in service during the past five years.

Millions of dollars also have been invested in freight cars, new rails and property improvements. For defense as well as industry's normal needs, Union Pacific—the Strategic Middle Route connecting East with West—supplies the demand for dependable transportation.

For information concerning passenger and freight transportation, consult local representative.
