

COME ON IN—AND BE DUMBFOUNDED!

—by the slickest and most fascinating little device you ever saw.
DEE TEE VAPOR CLEANER—THE ONLY SURE METHOD OF GEAR CLEANING

● Watch it clean gears 'til they shine like a new dollar. Even the metal pores are cleaned and all of the accumulation of tars, gum and worn-out grease in transmissions and differentials is gone in a matter of minutes.
 Car manufacturers say—For longer life clean and refill transmissions and differentials every 5,000 miles.
 Start fresh today with gears "handkerchief-clean." Come on in... we'll show you how DEE TEE works—FREE!

CARD OF THANKS

We wish to take this opportunity of thanking our friends and neighbors for the kindness and sympathy shown us during our recent bereavement.

To the I.O.O.F. and Rebekah lodges also we wish to especially thank those who sent floral gifts and cards.
 Mrs. Henry O. Thompson and Family.

There's a crowd on the lines

It's always a big crowd in these war days. But the Long Distance operator keeps the calls moving quickly unless they just get too many for the circuits. ● If she says the circuits are busy, you can help by canceling your call if it isn't really important. But if you can't cancel, the operator will request—"Please limit your call to 5 minutes." It's the work of war we are trying to speed over the wires.

Vitamin E Cures Muscle Diseases, Claim Doctors

The synthetic production of a water-soluble form of vitamin E, recently found helpful in the treatment of some diseases of the muscles, was reported before the closing sessions of the National Academy of Sciences.

The new form of vitamin E was described by Prof. Lee Irwin Smith of the University of Minnesota. Natural vitamin E is soluble only in fat and therefore must be administered by injection in order to be properly absorbed by the body.

The fact that the new synthetic form can be made to dissolve in water by the addition of a drop or two of hydrochloric acid, it was pointed out, provides for the first time a vitamin E which can be taken orally.

Studies which determined for the first time the exact wave-length bands in the ultra-violet radiations of the sun which produce cancer of the skin by overexposure were reported by Drs. H. P. Rusch and B. E. Kline of the University of Wisconsin.

It has been known for some time that over-exposure to sunlight is an important causal agent in cancer of skin. The high incidence of skin cancer in sailors, the report stated, "has long been known, and nearly 50 years ago 'seaman's skin' was described as a precancerous condition attributable to continued exposure to light."

Date Seed Will Always Originate New Variety

Due to the fact that a date seed will always originate a new variety but never reproduce its kind, the only way to perpetuate a variety is to propagate its offshoots. A date palm produces at, or near its base, 5 to 25 offshoots or suckers during the first 10 or 15 years of its life. These offshoots are cut from the parent palm when they have developed a root system of their own and are planted 48 females and 1 male palm per acre.

The female palms bear the fruit which will mature and ripen only if the flowers are fertilized with pollen from the male palms. The male flower alone has fragrance, attracting bees, so that it is necessary to collect its pollen and pollinate each female bloom by hand—a task beginning in February and lasting until May. This is closely followed by thinning and supporting the fruit bunches. Later, each bunch is covered with paper protectors to guard against rain—their worst enemy. From September until Christmas the fruit is picked once a week. Inasmuch as all the dates on a cluster do not ripen at the same time, they must be picked individually. A cluster cannot be cut in a bunch like bananas. After the fruit is picked, it is thoroughly cleaned, graded and packed under the most sanitary conditions.

PILGRIM HOLINESS CHURCH

J. W. Stuart, Pastor.
 Sunday School, 9:45 a. m.
