but—HEATS THE ELECTRIC
IRON TO PRESS A HANKY

● ELECTRICITY for every use has long been cheap and abundant here. So, why should any one be asked to "think twice" before using a little electric iron? What difference could it make?

Well, this is wartime. It *does* make a difference now. A big difference! Any waste of electricity wastes *other* things which are not so plentiful.

It means a waste of copper, steel, brass, tungsten and all the other critical materials that sooner or later will be needed to repair or replace electrical appliances. It means a waste of manpower, fuel and transportation, and it wastes money!

That is why Uncle Sam asks you to use electricity *wisely*. That is why you are expected to plan your schedules in business, home and industry to get the most good with the least amount of waste and wear from your electrical equipment.

USE WHAT YOU NEED...
BUT NEED WHAT YOU USE!

The WPB asks everyone to help save by avoiding waste. But don't endanger your eyes, your safety or health. Follow the rule of "Use what you need... but be sure you need what you use."
