COMMITTEE SAYS GAS.

(Continued from Page 1.)

investigation of its own. After some parley the committee secured permission to pass the police lines and viewed the wreckage from the property adjoining the Times building. At this time even the city employees had been ordered off the property by the Times owner, the report says. The report then recites the principal facts of the explosion and the subsequent events, referring to the fact that the "Times itself, in the issue on the morning of the explosion and before there was any time for investigation," it alleges, charges that the explosion was caused by the enemies of industrial freedom. The report then refers to articles printed in subsequent issues of the Times, charging union labor with responsibility for the catastrophe. **Otis Is Insane.**

"Inasmuch as there are many persons who are not acquainted with General Harrison Gray Otis and his newspaper," the report continues, "and who, therefore, naturally would suppose that there existed evidence

to support such assertions, it would seem important to shed some light on the matter."

The report then reviews General Otis' fight against unionism in Los Angeles, saying, among other things, that "on the subject of industrial freedom it is no exaggeration to say that General Otis is insane." The report further says the dream of the general's life has been to exterminate unionism in Los Angeles.

"Trumpeting abroad the report that unionists were plotting to do him violence, Otis made of his editorial rooms an arsenal," the report says. It then refers to the bitter fight made by the Times against the unions during the recent strike of the Metal and Brewery Workers in Los Angeles, and says:

Not Dynamite.
"Such was the situation just previous to the blowing up of the Times. It has not been demonstrated that the building was destroyed by dynamite. The only two points which possibly can be urged in support of the dynamiting theory after four weeks of investigation are: First, that a committee appointed by the mayor reported that the explosion

used was one of high power, such as nitro-glycerine or a product of nitro-glycerine; second, that the day following the disaster infernal machines were discovered in the vicinity of the homes of General Otis and Secretary Zehandalaar of the Merchants' & Manufacturers' association."

The report then ridicules the finding of the "infernal machines," saying that one of them exploded without sufficient force to destroy an ordinary alarm clock.

Couldn't Be.
"On the other hand," the report continues, "to those who are familiar with the peculiarities of explosives by dynamite, the evidence furnishes an overwhelming certainty that there was no dynamite connected with the affair."

"Our investigation developed the following facts: That the sound of the explosion was deep and rumbling, like cannon or distant thunder; that the fire was simultaneous, the entire building being enveloped in flames within ten seconds after the first report. "The flames shot straight toward the sky, blowing upward from the

ground floor through three stories and through the roof and past the sixth-story windows of the section of the building to the northward.

"That the power of the explosion, as well as the flames, tended upward and not outward, the outside walls of the building generally remaining standing.

No Panes Broken.
"That even some of the window panes of the building were not broken while almost no window panes were broken in the surrounding buildings.

"That various employees of the Times smelled gas on the night of the explosion, the fumes being so strong as to cause a feeling of nausea in some cases.

"In our opinion, these facts prove conclusively that the explosion was caused by gas and not by dynamite. "That gas explodes with a booming or rumbling sound. Dynamite explodes with a splitting, crackling noise. "Gas explodes with a flash of flames. Dynamite does not make fire. When exploding it lets loose elements that put out fire. "A gas explosion blows upward;

What the Home Rule Bill [328] Really Is

It gives cities and towns the right to have saloons or no saloons. It gives the people who live in cities the right to vote on and decide this question themselves. It puts the control of the liquor traffic into the hands of the voters of each precinct, so that every residential district in a city or town is protected. It means real local option. All state criminal laws are maintained. Under it the farmer has the same protection he now enjoys. It is a law fitted to local conditions as they exist in every section of the state. It gives absolute control of the liquor traffic, particularly in towns and cities, where it is most needed. It will prevent the county from wiping out the city vote on city measures. It is a law which makes prohibition possible where wanted, and impossible where not wanted. It means regulation which regulates. (Paid Advertisement.)

dynamite with equal strength in all directions. Had the Times building been destroyed by dynamite every outside pane in every window for many blocks around would have been shattered into bits. The rest of the report reviews the general labor situation and the effect that the destruction of the Times building would have on unionism if

it could be proved that the unions were responsible for the explosion. From this it is argued, that the union had no part in the destruction of the building.

To write a property-selling ad is simply to write the truth about the property—and print it more than once, if necessary.
