

# It is because the MONARCH RANGE

## is built right that it gives the same efficient and economical service year after year

We unhesitatingly recommend the Monarch Range to our trade, because it is a specialized product --because it is made with one aim to guarantee the most efficient, economical and lasting service at the lowest possible cost.

Users of other makes of ranges would do well to look the Monarch over--it can save you money--give you time to accomplish other things and eliminate all of the disagreeable work in your kitchen

Nearly all ranges give satisfactory service the first year, but the **Perfect** range is the one,

—that takes no more fuel to operate after ten years' service than it did at first,

—that can be controlled by the housewife just as easily after that period of use, and

—that is so constructed as to reduce to the minimum, repairs and renewals of the different parts.

There is only one range that will insure such service—and that is the **Monarch**. It requires a surprisingly small amount of fuel—many housewives who have hitherto used a cast iron range feed the same amount of fuel to the **Monarch** before they realize their mistake—the **Monarch** takes less fuel to operate, making it an **economical** range—this daily saving goes on indefinitely until the **Monarch** pays for itself —not once, but every few years.

Do you realize what this means? That it would actually cost you less to purchase a **Monarch** every few years than it does to pay for the fuel to operate the range you're now using.

But that's unnecessary, because the **Monarch** is built to give **lasting** service. Malleable iron is used in its construction wherever it will strengthen the range and increase its efficiency—Malleable Iron is **unbreakable**—so strong that it can be **riveted** cold to the steel body of the range, insuring solid and **permanent** seams. No air can penetrate its seams and joints to reduce the efficiency of the range. The cast iron stove you are using has **puttied** seams—no wonder it takes more fuel to operate it—the putty dries up and falls out after the first year or two of service, leaving all seams wide open—but they can't open in the **Monarch** because the seams are **riveted tight and stay tight**, insuring the same **efficient and economical** service after five, ten, or even fifteen years of use.

The **Monarch** is the Highest type of range manufactured anywhere. Besides giving **economical and lasting** service, it has more exclusive **labor and time saving** features than any other make of range. The Malleable Iron top is polished and requires no blacking—an occasional wiping with a dry cloth keeps it nice and bright. The **nickel plated finish** has a plain surface that can be cleaned **easily and rapidly**—no intricate fancy trimmings which require constant and careful attention to keep clean.

The **Monarch** has an ash pan of unique construction—it is **enclosed and not attached** to the ash pit door. No dust and ashes can escape—this eliminates the work of "continually sweeping up."

The **Monarch Duplex or Double draft** gives an even spread of heat to all parts of the fire, enabling you to "cook by the clock." The contents of the **Monarch oven** require no attention—no shifting or re-shifting of pans is necessary.

THE HOUSE THAT MADE IT POSSIBLE TO BUY HOUSE FURNISHING GOODS IN MEDFORD AT REASONABLE PRICES

### CITY OF TENTS TO OPEN SOON

Survey Shows Only Tenth Overlaps School Property—Will Open Next Month Under New Management—Little Alteration.

That the "tent city" will again be open for the accommodation of visitors to Medford this summer and not, as reported some time ago, die away with an account of its proximity to the grounds of the Washington school, was the announcement made yesterday by G. F. Cuthbert and company, owners of the property. A recent survey of the location of the canvas city resulted in the discovery that less than one-tenth of it overlapped the school grounds and so, with only the offices removed from their former position, the property will be opened to the public within the next 30 days. It will be operated this year by O. D. Sturgess, who has secured a one-year lease on it.

The city originated last year when the influx of visitors became so great that the hotels were filled to overflowing all the time. Many people were forced to secure their sleeping quarters in Ashland while transacting business here with the result that the tent city was built to accommodate them.

### YOUNG COUPLE GET LICENSE TO WED

Fred Hendricks of Medford and Helen Applegate of Fort Klunell secured a marriage license at the office of County Clerk William H. Coleman Saturday morning. They returned to Medford on the noon train.

### NO ANTI-ALIEN LAWS AT PRESENT

California Legislature Will Not Pass Any Laws Against Japanese—Johnson Will Oppose Diplomacy Disturbing Law.

SACRAMENTO, Cal., Jan. 21.—No legislation singling out the Japanese for exclusion as land owners will be passed at this session of the California legislature from the present outlook. Two bills which have been introduced so far seek to prevent Asiatics or persons not able under the law to become citizens of the United States from owning agricultural lands or leases of the same. These bills will probably be amended in committee and altered so as to read that no alien shall own such lands or lease them. Governor Johnson, though recognizing the menace to the American farmer of the low-waged, cheap-living Japanese, will not, it is stated, allow any diplomacy disturbing law to pass.

### RICHMOND WILL BE SPLENDID CITY SOON

Richmond, Calif., will be the greatest manufacturing city in the west. No other city in the country is growing so rapidly and so substantially, and certainly in none on this side of the continent are so many millions of dollars being spent by the big business interests. Such concerns as the Standard Oil company and the Pullman Car company are located there. The same reasons that brought these large concerns will surely bring others of equal importance. Richmond is a very desirable location for such concerns, because it

### NO MORE MUDDY WATER IN CITY

Owing to Misunderstanding Water From Main Line of Gravity System Has Been in Use During Past Few Days.

For the past three or four days householders in Medford have been using water containing more or less sediment owing to the heavy storm on upper Little Butte creek. This will not occur again, however, as hereafter when the creek is high water will be used from the reservoir after it has had a chance to settle and not from the main pipeline. It was owing to a misunderstanding that the main line supply was not cut out during the past few days but this has been remedied and there will be no more muddy water.

If you are sure that your store offers better values than any other in your line, be equally sure that it is better advertised.

has every facility that they could wish for.

Richmond is only 10 years old, but already has \$30,000,000 invested in factories.

Richmond is seven miles from San Francisco and is on the continental side of San Francisco bay. Has 12 miles of deep water frontage, advantageous factory sites and low tax rate. It is the logical home for manufacturers and capitalists.

Now is the time to invest there. You can buy on very easy terms, and at very low prices. Have a few more choice lots on an 80-foot boulevard. Don't fail to see me before these are all sold.

Have sold \$15,000 worth of this property in Medford the past two weeks. It will pay you to investigate. O. E. TRACY, Agent, Hotel Nash

### JACKSON HIGH TEAM DEFEATS LOCAL BOYS

The high school basketball team was defeated by the Jacksonville high school boys in a game played in Jacksonville Friday evening. Both sides made a good showing but the county seat boys won by a good margin.
