222 WEST MAIN STREET

A hot kitchen is little better than a prison in summer. But the range is there, so all the cooking and the washing must be done there, too.

What a relief it would be to move the range where you pleased. You can do this with a New Perfection Oil Cookstove—cook your dinner out on the porch, if you like. It is the only range that is really portable—that works equally well in any place. There are no connections to be made, as in a gas range; no wiring, as with an electric stove; no sooty flues and ash-filled grates, as with coal or wood.

The long, enameled chimneys carry the heat directly up to saucepans, oven or boiler; you get full value from your fuel, without waste. I

Don't Judge a Roofing By Its Looks

On the surface most ready roofings look the same, but the weather finds the hidden weakness. You can't tell by looks which roofing will last twenty years and which will go to pieces in a single summer.

Has stood for nearly twenty years as the standard of all ready roofings. The first buildings ever roofed with Ruberoid-nearly twenty years ago-are still water-proof and weather-tight. These buildings are the oldest roofed with any ready roofing.

It tells the advantages and disadvantages of tin, tar, shingle, iron and ready roofings-fairly, frankly, impartially. Learn about all roofs before deciding on any.
