This is the face of
Honest Joe,
 With real estate I flirt.
 If you want to deal,
 just look me up,
 The man who sells the dirt

A VERY CHOICE HOME PROPERTY

This comprises 10 77-100 acres of full-bearing pears, mostly 16 years old, there being a few young trees around the edge 4 years old.

This property is located four miles south of Medford and one mile west of Phoenix, overlooking practically the entire valley.

The trees are in first-class condition and are composed of Comice and Bosc. All the buildings are new, having been built within the last two years, costing in the neighborhood of \$5000.

Here is a proposition that does not occur once in a lifetime. The price of this property is \$15,000, with a cash payment of only \$5000, the balance in annual payments of \$2000 each until paid. Interest on deferred payments only 5%.

Write me for further particulars regarding this property.

DOES IT PAY

To grow alfalfa in the Rogue River valley on land costing \$300 per acre?

YES!

READ THIS: I own 16 acres on Ross Lane, 3 miles northwest of Medford, from which I cut four crops this year without irrigation, and sold same for \$700. By feeding this to dairy cows and hogs the returns would be 75 to 100 per cent greater, besides returning the soilage back to the land, thereby increasing the production. I can sell you first-class land for growing alfalfa for \$150 to \$300 per acre. Great demand for all dairy and meat products at good prices. Come to the Rogue River Valley. You will be pleased with conditions.

JOHN DEERE SPREADER

The Spreader with the Beater on the Axle

The Simplest Spreader Made

Entirely New .. Nothing Else Like It

THE JOHN DEERE SPREADER—The Spreader with the Beater on the Axle—is as much of an improvement in spreader manufacturing as the self-binder was over the old reaper. It is made along entirely new and different lines from the ordinary spreader.

The first manure spreader ever made was built in 1878 by the Kemp & Burpee Manufacturing Company. Up to the time of the John Deere Spreader every spreader has been made along the same general lines as this first machine. Power was taken from one end of the main axle and transmitted, either through chains or gears, to the beater, mounted above and in the rear of the axle. Heretofore the only improvement in manure spreaders since the first one was made in 1878 has been in the refinement of details.

The John Deere Spreader is a radical departure from the old method of construction. It is made along entirely new lines and is a great improvement over the old style spreader. Come in and examine the machine and you will readily see why the John Deere Spreader is so far superior to any spreader heretofore constructed.

Even if You Don't Need a New Spreader Now come in and get one of our spreader books. They contain a number of articles on why farm manure should be used on the land, how it should be applied, how it should be stored, the value and effect of using it in various ways. In addition there is a detail description of the John Deere Spreader with illustrations in colors of this spreader working in the field.

Better Investigate .. It's Worth Your While
