Corn on the Cob —the Roasting Ear

Is not more delicious than the

New Post Toasties

In the growth of corn there is a period when the kernels are plumped out with a vegetable milk, most nutritious (roasting ears). As it slowly ripens this hardens and finally becomes almost flinty.

This nutritious part of the corn is cooked, seasoned, rolled thin and toasted by a new process which enhances the true corn flavor.

Different from ordinary corn flakes, the New Post Toasties have a distinctive form and flavor; and they keep their appetizing crispness, even after cream or milk is added.

These Superior Corn Flakes come oven-fresh in tight wax-sealed packages; and they cost no more than ordinary "corn flakes." Insist upon having
