IGHT up an OWL and puff slowly on its even-burning fragrance.

See how freely it draws! Note that the OWL gives you its best from the very first. Note that the smoke ridges form perfect circles on the outer edge of the ash. This is the test of an even-burning cigar.

Why does the OWL burn so evenly?

-because the long leaf filler runs straight down to the square-nosed tip, allowing the whole cigar to become alight at once.

-because the OWL is shaped by hand and always allows a free draught of air.

Because of this careful hand-workmanship you get all the mellowness which makes the OWL the satisfying smoke it is. You can smoke your OWL without having to light a second match the way you sometimes do with a poorly made cigar.
