WHY 85%
of American makers of electrically equipped motor cars use Willard batteries.

15% use other makes.

The "Why" of Willard quality is faithful attention to little things you can't see—but which are neglected in cheap batteries.

Poor construction may "get a cross" for a few months, but after that look out for trouble!

Here are some of the reasons why Willard Batteries give the longest life and lowest upkeep cost.

Honest Plates—Grids with lony of antimony the "tempering metal" to make them stiff and sturdy. Oxides tested over and over for purity, carefully selected for the coarse grained structure that makes them stick together and gives greater capacity for a longer time.

Separators—Candled like eggs to detect imperfections.

Hard Rubber Jars—Tested to a tensile strength of 3,600 pounds, and subjected to a 24,000 volt spark to find any weak spots.
