• • •

When painting the floor of a room care should be taken not to paint yourself into a corner. This can be avoided by painting in circles so that you'll be left in the middle.

• • •

DO YOU KNOW—

The old fashioned solid garden hose is seldom called for any more now that the hollow kind is on the market?

• • •

A jury in Chicago stayed out for 18 hours and finaly turned in a verdict that the prisoner was guilty of intoxication because he was found trying to make the lion in front of the Art institute go fetch his cane when he'd threw it in the lake.

LANSING TALKS ON FOOD EMBARGO

WASHINGTON, Nov. 23—"The department of state has no views on the subject of the porposed food embargo," Secretary Lansing said today. "That is purely a domestic question."

The department, he said, has neither urged, proposed nor discussed any such embargo as he does not think it concerns international relations in any way.

Such action, it is said, could hardly be objected to by any foreign government in view of the fact that they have taken such action, where necessary for public safety.

No similarity could be drawn, it was said, between the proposed embargo and the shipment of munitions.

RAILROADERS SEND TURKEYS TO WILSON

WASHINGTON, Nov. 23.—President Wilson plans to spend Thanksgiving day at the white house with members of his family. The annual flock of turkeys "raised especially for the president" has already begun to arrive. One will be selected for the white house table and the others, according to custom, probably will be sent to hospitals or distributed among the poor. On the crate of one turkey which came from Oklahoma railroad men had written messages such as "How about the high cost of living?" and "Remember the eight-hour day."

Quick Way to End Coughs, Colds and Croup

An Excellent, Inexpensive Home-Made Remedy that is Prompt and Sure.

If you have a severe cough or chest cold accompanied with soreness, throat tickle, hoarseness, or difficult breathing, or if your child wakes up during the night with croup and you want quick help, just try this pleasant tasting home-made cough remedy. Any druggist can supply you with 2½ ounces of Pinex (50 cents worth). Pour this into a pint bottle and fill the bottle with plain granulated sugar syrup. Thus prepared, you have a pint of really remarkable cough remedy—one that can be depended upon to give quick and lasting relief at all times.

You can feel that take hold of a cough in a way that means business. It loosens and raises the phlegm, stops throat tickle and soothes and heals the irritated membranes that line the throat and bronchial tubes with such promptness, ease and certainty that it is really astonishing.

Pinex is a special and highly concentrated compound of genuine Norway pine extract, combined with guaiacol and is noted for its speed in overcoming severe coughs, throat and chest colds to millions of enthusiastic users the world over.

There are many worthless imitations of this noted mixture. To avoid disappointment, ask for 2½ ounces of "Pinex" with full directions and don't accept anything else. A guarantee of absolute satisfaction or money promptly refunded, goes with this preparation. The Pinex Co., Ft. Wayne, Ind.

A CLASS STRUGGLE IMPENDS

ACCORDING to the New York World, J. P. Morgan is the man behind the secretly organized National Industrial Conference board, which, with a membership of 15,000 captains of industry, having $8,000,000,000 capital, employing 6,000,000 workers, has begun a vast organized warfare on the eight-hour day and minimum wage proposals.

Mr. Morgan is chief owner of the General Electric company, one of the largest employers of labor, and when that concern beat its employes in their eight-hour-day strike, began the organization of a "co-operative body composed of representatives of national industrial associations for co-operative action" to prevent the spread of the eight-hour day propaganda throughout the country. Mr. Morgan and his associates also control 200,000 miles of railroads, whose organized employes are demanding the eight-hour day.

The various affiliated organizations, such as the National Association of Manufacturers, the Founders' association, the Metal Trades, etc., have all adopted resolutions against the eight-hour day for trainmen, enlisted the support of the National Chamber of Commerce, and are actively organizing shippers and industrial corporations for united opposition to the Adamson law.

United class action by the employers is reacting upon the employes. All branches of labor are uniting in self-defense. The American Federation of Labor is negotiating consolidation with the trainmen brotherhoods, and the result promises a nation-wide struggle between capital and labor.

Whether or not the eight-hour law is practical or workable for railroads is not at all the question at issue. Morgan and Wall street merely use that as an excuse. They are unwilling to try it out. It is the eight-hour principle that they object to, not only for railroads, but for all industry.

Mr. Morgan's viewpoint is well known. He is without vision for human welfare. To him the toiler is simply a soulless unit to be exploited for profit. It matters not that the eight-hour day has proven profitable in many industries; that it improves the character of the workman, means race conservation, and hence is the highest type of national preparedness. Morgan has as little sympathy with his fellow man as his prototype, the feudal baron of old, had for his serfs.

To avert a class struggle is one of the many problems Woodrow Wilson faces, and he will have need of all the courage and statesmanship he possesses to keep the nation at peace internally as well as externally.

JACK LONDON

BY the untimely death of Jack London, at the early age of 41, America has lost her most forceful and vigorous, and probably her greatest, author of the day.

Daring and original, master of action and of language, past performance gave greatest promise for his future. He early attained remarkable success, but his literary achievements were regarded by himself and the public as training for greater efforts in the future.

A child of poverty and of struggle, his native ability raised him above environment. He created his own opportunity, but his early hardships awakened his sympathy for toiling humanity, and a large share of his efforts were directed towards combatting industrial and economic ills.

As a novelist, Jack London outranked all living Americans—yet he had only begun. His loss is the world's loss.

The Drift of Science

By DR. J. LAWRENCE HILL.

This is the century of interrogation. Today, as never before, men question, doubt and deny what preceding ages considered final both in religion and science. Both have taught us that in the realm of thought reason alone is authoritative, and that only when we follow her leadings shall we know truth in all its applications, and become rooted and grounded in faith.

After centuries of misunderstanding and bitter opposition both science and religion have become more sympathetic and tolerant towards each other. Today science is more religious and religion is more scientific. Today they recognize that they are complements of each other, and that their aim is the same. Science deals with God outside of matter, religion with God imminent in nature, and revealing Himself not only in nature, but in human consciousness and experience.

During recent years there has been a complete overturning of many of those underlying principles of natural science which have heretofore been considered as firmly established. Scientific discoveries have followed each other in quick succession, notably the Roentgen rays in 1895 and the Becquerel rays in the following year. Then came the discovery of radium in 1898. Since then other very important discoveries or speculations have followed along the line of atomic disintegration, the transformation of matter, the thermal effects of radio-activity and intra-atomic energy.

Faraday produced the theory of the lines of force, but the mathematicians immediately attacked it. Laplace and Poisson have "befuddled" us by their objections to the undulating theory of light propounded by Young and Fresnel. Ampere developed a theory of magnetism, but Poisson and Weber were not behind him in theories of their own on this subject. Professor Maxwell wrote a treatise on electricity, which, according to Professor Foley of Indiana university, "few could read and no one could fully understand," because of the fact that his ideas of electric displacements and displacement currents were bound up in equations which were without experimental verification gave only the vaguest notion of the subject.

Science has been accustomed to regard matter and energy as the two great entities with which it has to deal, but more recent and careful research into nature of the atoms of which matter is held to be composed has given rise to the theory that matter in its last analysis may be found to be only ether in motion, or something which can be resolved into electricity and then into some unimagined mode of motion of ether, and that finally it will be found that atoms have had their day and cease to be. The earlier conceptions of matter as an eternal and indestructible entity have been rudely shattered.

Matter, as we have already seen, has been reduced to electric charge, and we can now take our choice of a great many different theories propounded by science to explain its nature. It is claimed by recent writers that there are strong reasons for believing not only in the electric nature of matter, but in the molecular structure of electricity itself, to say nothing of the dependence of mass upon electricity and the theories of the radio-activity and disintegration of matter. Then there is the one-fluid theory, the two-fluid theory and the potential theory, and the nineteenth century school of plenum, one ether for light, heat and electricity and magnetism. For a fuller discussion of this subject, I refer you to an article by Professor Arthur Foley, Indiana university, in a recent number of The Popular Science Monthly on "Recent Developments in Physical Science."

Earlier conceptions and theories of the indestructibility of matter are giving way to the conviction that its destruction and creation by man are within the range of scientific possibility.

Change in physical phenomena are due to force of energy or vibration, and are thus reduced to idealistic forces which are beyond the cognizance of the senses. They cannot be seen or measured. They are only known by certain effects commonly attributed to them.

(To Be Concluded.)

Catarrh Cannot Be Cured

with LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarrh is a blood or constitutional disease, and in order to cure it you must take internal remedies. Hall's Catarrh Cure is taken internally, and acts directly upon the blood and mucous surfaces. Hall's Catarrh Cure is not a quack medicine. It was prescribed by one of the best physicians in this country for years and is a regular prescription. It is composed of the best tonics known, combined with the best blood purifiers, acting directly on the mucous surfaces. The perfect combination of the two ingredients is what produces such wonderful results in curing catarrh. Send for testimonials, free.

MILLION NAMES FOR WORLD PEACE

SAN FRANCISCO, Nov. 23.—So spontaneous has been the response to the appeal of the California branch of the American neutral conference committee for world peace, launched in California today, that a slogan of a "million names" will undoubtedly be adopted, according to the publicity department of the committee here. The original 500,000 signatures to petitions which were counted upon can easily be outdistanced, it is believed and it is thought possible to have signed up over 800,000 before Christmas.

The movement has been endorsed by the head officers of practically every fraternal order in the state, thus aligning a powerful influence, which promise to be very active. Both the University of California and Stanford university have promised several thousand names and the northern California Baptist association has entered the movement. Special services are to be held in churches throughout the state on different occasions when the petitions will be presented for signature.

PRESIDENT SUFFERING FROM COLD IN HEAD

WASHINGTON, Nov. 23.—President Wilson, who has been suffering from a slight cold in the head for several days, started out to play golf this morning, but returned to the white house because of rain. He remained in his room the remainder of the morning and saw no callers.

Ford
THE UNIVERSAL CAR

The new Ford cars are up-to-the-minute in appearance, with large radiator and enclosed fan, hood with full streamline effect, crown fenders front and rear, black finish with nickel trimmings—a snappy car—and with all the dependable, enduring and economical qualities that have made the Ford "The Universal Car." One fact is worth more than a ton of guesses. Ford cars are selling from five to ten over any and all other cars, simply because they give more satisfactory service, last longer and are easier to operate and cost less to maintain—and there's no guessing about the reliability of Ford Service. Runabout $345, Touring Car $360; Coupelet $505; Town Car $595; Sedan $645—f. o. b. Detroit.

Easy Payments.
