I have not been able to ascertain the amount they have raised, but I notice some of the objects of their search dodging around the corners of the buildings and one lady, who seemed to be on a "hot trail" ran square against our road supervisor and came near running into me as I was talking to him at the time, but he braced himself and kept from falling and I dodged back just in time, but there was no harm done and the aforesaid lady is just as pleasant as ever. I understand that they have been very successful in their undertaking.

MACHINE GUNS QUELL IRISH RIOTERS

CORK, June 25.—Machine guns were used on the Sinn Feiners in the disturbance here yesterday morning. They were brought into action after the police with clubs had failed to restore order. One rioter was killed, another severely wounded while a dozen were treated in hospitals for bayonet and other wounds. The riot eventually was quelled without the troops coming into action.

LONDON, June 25.—The number of persons injured more or less seriously in the rioting in Cork last night is given as about thirty, according to a Central News dispatch from that city. One police inspector was seriously injured and policemen had narrow escapes. When machine guns were trained on the crowd most of the rioters disappeared.

RUSSIA NEEDS 1000 LOCOMOTIVES

WASHINGTON, June 25.—"Locomotives, locomotives and still more locomotives," are the fundamental needs of Russia today, according to Professor Lomostoff, railroad minister with the Russian mission. "Quite frankly I can say to you, our American friends," he said, "give us locomotives and we shall give you military success."

Russia needs at once 1000 ten-wheel American locomotives to put

her idle cars in operation; another thousand with an appropriate number of cars to free the congested freight terminals and another 850 annually to meet the deficiency between Russia's manufacture and her needs for renewal and new construction.

The United States, the professor said, is Russia's hope in this huge program and negotiations are now in progress which are most promising.
