Little Causes Back of Battery Trouble

A little too much cranking.
A little lack of distilled water.
A little looseness in battery connections.
A little less charging than battery health requires.
All are little, but any one may grow quickly to the point where the starter, dimmed lights, and dead ignition give a warning that is too late.
In a very few minutes we may be able to tell you facts that will prevent trouble later.
Ask, too, about the Still Battery Willard—the only battery with the "Three Dry" principle that's your absolute assurance of getting a battery as new as the day it left the factory.
