Acids in Stomach Cause Indigestion

Create Gas, Sourness and Pain How to Treat.

Medical authorities state that nearly nine-tenths of the cases of stomach trouble, indigestion, sourness, burning, gas, bloating, nausea, etc., are due to an excess of hydrochloric acid in the stomach and not as some believe to a lack of digestive juices. The delicate stomach lining is irritated, digestion is delayed and food sour, causing the disagreeable symptoms which every stomach sufferer knows so well.

Artificial digestants are not needed in such cases and may do real harm. Try laying aside all digestive aids and instead get from any druggist a few ounces of Bisurated Magnesia and take a teaspoonful in a quarter glass of water eight after eating. This sweetens the stomach, prevents the formation of excess acid and there is no sourness, gas or pain. Bisurated Magnesia (in powder or tablet form—never liquid or milk) is harmless to the stomach, inexpensive to take and is the most efficient form of magnesia for stomach purposes. It is used by thousands of people who enjoy their meals with no more fear of indigestion. Adv.

INDIAN MEDICINE MEN

In the Indian Tribe one finds the "Medicine Man,"—one versed in the healing art of roots, herbs, leaves and barks. In these he discovers emollients, astringents, laxatives and tonics, all of which are prepared and offered to sufferers among the tribe. To such good old-fashioned roots and herbs Lydia E. Pinkham's Vegetable Compound, the most efficient remedy in the world for female ills, owes its success. For forty-five years it has been restoring the women of America to health, until it is now recognized as the standard remedy. Adv.

A Crawler Tractor Costs Less to Own

The Cleveland Tractor

Preparing the ground for spring work must take into consideration wet weather as well as packing the ground. The farmer who does his heavy work with horses has the expense of keeping these horses, and yet is not able to do his work as quickly as the farmer who has a tractor. The farmer who has a tractor can do his work quicker than a horse farmer, but must keep some horses in reserve to help out on heavy work in case of wet weather, or to pull over these places where the tractor wheels slip. The Crawler Tractor Farmer is independent of either wet weather or soil conditions, and does not need to keep the extra horses in reserve for heavy work. The fact that a crawler tractor takes the place of more horses than does a wheel tractor is one of the numerous reasons why so many farmers buy crawler type tractors when they purchase their second tractor.

THE CLEVELAND
Costs less to own than other tractors because it is more reliable and accomplishes more work in a given time. It has roller bearings throughout, four cylinder heavy duty motor, with working parts enclosed against dust.
