

Terrible Tortures From Itching Skin Diseases

No Sure Relief Until the Cause Is Removed.

When the blood becomes infected with millions of tiny disease germs that attack the skin, then the fiery irritation and intense itching will remain with you until these germs are removed from the blood.

Genuine relief, therefore, can only be expected from a treatment that goes right to the seat of the

trouble, and strikes at its cause. Such a remedy is S. S. S., the reliable old blood purifier that kills the germs of disease, and sends a new supply of rich red blood coursing through the veins. S. S. S. has been used successfully in some of the worst cases of eczema and other skin disorders.

SOUND SENSE AND RECIPROcity

The Farmers and Fruitgrowers bank calls our attention to the fact that J. H. Cochran, manager of the Western Union Life, has recently caused several large deposits to be made in Medford banks. This action is commended by the local banks on account of the friendly spirit of reciprocity shown by the Western Union, as well as the sound business sense displayed.

The people of the city of Medford pay out annually something over a hundred thousand dollars in life insurance premiums. For the most part, this money is invested in the large cities of the east.

The policy and practice of the Western Union Life is to leave a good portion of the money they receive in the communities where they are represented. They do this through making deposits in the local banks and investing in farm mortgages in those communities.

What Do You Want a Tractor For?

The first thing you will think of is plowing. But don't stop there. If your tractor is to be a profit-maker for you, it must do much more than plow.

It must be able to do practically all the work around your farm that you have been in the habit of doing with horses or mules and do it better and more cheaply.

It must be able to do your harrowing and fitting and seeding.

It must be able to do your haying and harvesting.

It must be able to do your hauling.

It must be able to do your belt work.

And it must work in all sorts of soil, too—sandy soil, volcanic ash soil, wet clay, hard soil, soft soil, heavy and light soil.

It must be able to handle your work on side hills and grades, as well as on level fields. In short, it must be able to do all kinds of farm work at all times of the year.

The Cletrac Tank-Type Tractor was designed and built with a full knowledge of the various kinds of farm work it would have to do in order to solve the farmer's tractor problems.

The more you investigate the Cletrac, the better satisfied you will be that it measures up to these requirements.
