

JOHN H. BURNS, of Cincinnati, Ohio, who says his wonderful restoration to health since taking Tanlac has astonished all his friends, has gained twenty pounds.

"My friends are all astonished over my wonderful restoration to health since taking Tanlac," said John H. Burns, of 308 East Front St., Cincinnati, Ohio, recently.

"I don't know what it is, but there is something about Tanlac that certainly does the work," he said, "and I firmly believe if it hadn't been for this medicine I wouldn't be here now. It completely restored my health and I have gained twenty pounds besides. I have a splendid appetite now, and can eat anything I want without being troubled in the least afterwards."

"Before taking Tanlac my health was dreadfully run down. My main trouble was indigestion, and I suffered misery night and day. I never seemed hungry, and the little I ate upset my stomach. I was nervous and couldn't get a good night's sleep. I lost thirty-four pounds and was going down hill rapidly. It seemed like the more medicine I took the worse I got."

"But since taking Tanlac I am like a brand new man. I sleep like a farm hand all night and feel just fine all day. In fact, I'm a perfectly well man once more. Tanlac certainly beats anything I ever saw in my life."

"Tanlac is sold in Medford by West Side Pharmacy, in Jacksonville by J. W. Robinson, in Rogue River by W. S. Cary, and by leading druggists in every town. Adv.

### 1920 DISASTER TO CATTLE MEN UNPRECEDENTED

EL PASO, Texas, Jan. 12.—A tariff duty on farm products at the earliest possible date, increased credits and early adoption of a commission to supervise the livestock industry, were urged as necessary steps for the early rehabilitation of the cattle growing industry by John B. Kendrick of Sheridan, Wyo., in an address before the annual convention of the American National Livestock association here today.

Kendrick is president of the association. "The history of our livestock industry the past year is unpleasant even to recall, much less to relate," declared Kendrick. "We had met discouragement a year ago. We have met disaster since. A generation of men has come and gone since any industry has suffered such a succession of losses."

Kendrick sketched the troubles of the industry, beginning with drought conditions in the southwest for two or three years, an increase in meat imports in 1920, a decrease in meat exports in the same period and the "absence of markets for wool at any price."

Increased labor costs, "the doubling up of taxes," and increased freight rates, "at the very time when declining prices on many products of the farm made shipment of those products prohibitive," were assigned by Kendrick as further cause for the present unfavorable condition of the industry. He estimated that increased freight, yardage and commission charges amounted to from 50 to 100 per cent during the last year.

"An extreme case in connection with this situation," he said, "is shown in a shipment of sheep from Wyoming in December 1920 in which the cost of movement, freight and other charges involved in the shipment and sale of sheep amounted to \$3,224.66, while the gross receipts from the shipment were \$3,873.11, leaving the net amount received only \$653.45 or slightly over 82 cents a head."

Pointing out that the longest bank loan that can be obtained on livestock is six months, while the process of production of cattle extends over a period of three years at the least, Kendrick declared nothing would give greater impetus to the production of livestock at this time than "a change in our laws which would provide a sound, rational system of financing that would extend to small producers loans in limited amounts."

He charged that "the long drawn out controversy over the ratification of the peace treaty and the readjustment of our foreign relations in Washington and the resultant demoralization and even destruction of our trade relations stands an eloquent testimony to the fact that the politicians in Washington have been, like Nero, 'fiddling while Rome was burning.'"

### 'NIGHTIE NIGHT' RICH IN STAGE SETTINGS

A notable feature of Adolph Klamber's production of "Nightie Night," which comes to the Page theatre next Monday night, is to be found in the settings, which are not only exceptionally lovely in themselves but provide exactly the right background for the story and the characters of the play.

In this particular case it is not the elaborateness so much as the appropriateness that causes content. Naturally in the first scene, which shows the interior of a Pullman chair car, there was no chance for choice or originality. It is just a duplicate of the real thing. The action then passes to the drawing-room of a smart apartment, and here one immediately gets a sense of thoughtfulness and good taste. It is the first instance in which the Venetian Eighteenth Century Chinoiserie had been used as a general motif of a stage scene, this style of decoration has had an immense vogue in smart apartments and more important private houses.

### DON'T RISK NEGLECT

Don't neglect a constant backache, sharp, darting pains or urinary disorders. The danger of dropsy or Bright's disease is too serious to ignore. Use Doan's Kidney Pills as have your friends and neighbors. A Medford case: "I am always glad to say a good word for Doan's Kidney Pills because I know them to be a remedy of merit. I have been taking them off and on for years when I have felt the need for a kidney remedy, and I have always received most satisfactory results. My kidneys have always been weak and the least little cold or strain affects them and makes my back weak and lame. A couple of boxes of Doan's Kidney Pills at these times, however, never failed to remove the misery and strengthen my kidneys." (Statement given March 18, 1916).

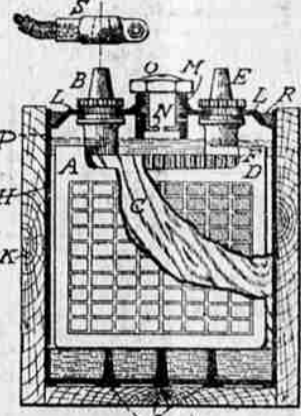

FOUR YEARS LATER on March 20, 1920, Mrs. Gustin said: "I gladly confirm all I said in my former statement in favor of Doan's Kidney Pills for they have never failed to give me good relief. I have always used them when I have had any sign of kidney disorder with fine results." 606 at all dealers. Foster-Milburn Co., Mfgs., Buffalo, N. Y. Adv.

### HINTS FOR THE MOTORIST

Copyright 1920, by The International Syndicate

#### The Storage Cell (Continued)

THE ACCOMPANYING FIGURE is an end view of a typical storage cell with the end walls of the containing case and jar removed, to expose the internal parts. Here A is a portion of the end plate of the positive group of say nine identical plates, all connected by their lugs and the connector strap to the positive terminal post B. Plate A is shown partly cut away to make visible the insulating separator C, here represented as of wood. This separator is also cut away to show the end plate D of the negative group of eight identical plates which are connected through their lugs and their connector straps to negative terminal post E. At F is shown a portion of the corrugated side of the separator between the first negative and the second positive plate. The hard rubber rectangular jar H, that contains the plates and electrolyte, has formed in its inside bottom surface the plate-supporting ribs J, which extend the length of the jar. These hold up the plates and leave a space at the bottom where active material, which falls from the plates may collect and not cause short-circuit. K is the containing case, strongly built of wood coated with acid-resisting compound. L is the hard rubber jar cover, which exactly fits the rectangular top of the jar and which is perforated for the two terminal posts B and E. It also carries the vent and filling aperture M. Since a motor car storage battery is subject to severe jolting, it must be so devised that there shall be no loss of the corrosive electrolyte by slopping and, at the same time, provision must be made to permit the escape of gases formed in charging. The electrolyte is intended to be filled at the level P. Filler hole cap O has a small opening in its head and carries the baffle plate N, which also has a small hole in it, so that when O is screwed in place, gas formed in the cell can always escape freely to the open air, but there is little chance for liquid to find its way through the small holes in N and O and slop from the cell. Cover L is sealed, at its edges, to jar H by means of a readily fusible pitch compound, which is poured over the surface of the cover and especially along the line of juncture at R. To prevent leakage of electrolyte past the terminal posts, they may be bushed with hard rubber and sealed in with compound or, as in the cell here shown, may be provided with soft rubber gaskets seated between a shoulder on the post and a packing-nut of hard rubber. Connections between the three cells usually employed to form a motor car battery are made with lead straps, the ends of which are fused or lead-burned to the terminal posts. The cells are connected in series, that is, a strap connects the negative terminal of the first cell with the positive terminal of the second cell and another strap connects the negative of the second to the positive of the third cell. This leaves a free positive terminal on the first and a free negative on the third cell and it is to these that the cable connections are made. S represents a common form of split-lead clamp, with conical hole to fit a lead terminal post B. The cable is "sweated" into a hole drilled in one end and the contact is tightened by taking up on the bolt. It is usual, in "single-wire" equipments, to "ground" the cable that is fastened to the positive battery terminal by electrically connecting it to the car frame. Each storage cell delivers an electrical pressure of about 2 volts when charged and when this voltage has fallen to 1.8 or 1.75 the cell is considered to be discharged. A battery made up of three cells gives 5 volts and is the kind most commonly used. The current that an ordinary motor car battery can deliver, temporarily, is extremely large—several hundred amperes. The capacity of a storage battery is stated in ampere-hours. For example, an 80 ampere hour battery—a common motor car size—is designed to deliver 10 amperes continuously for 8 hours on one charge and will furnish a somewhat larger number of ampere-hours if the current drawn is smaller and a less total number of ampere-hours if the current called for is greater. The sulphuric acid-water mixture, used as the solution or electrolyte, is usually so proportioned that it has a specific gravity of from 1.275 to 1.300 when a cell is fully charged, the gravity falling to 1.150 when the cell is completely discharged. When a cell is about one-half discharged, the gravity has fallen to about 1.200, and thus the condition of a cell can always be determined by testing its liquid with a hydrometer. In ordinary practice, such automobile batteries are constantly charged at current rates of from 10 to 15 amperes, from engine driven generators, so long as car speeds of 15 miles per hour or over are being made.

### Oregon Grower Notes

The apple acreage in Oregon, according to the figures of the Oregon Growers Cooperative association, is 50,000. The prune acreage is about 40,000, while that of pears is 13,500.

C. I. Lewis, with the O. A. C. 14 years as chief of the horticultural department, and now manager of the organization department of the Oregon Growers Cooperative association, advises the planting of the Bartlett, Bosc and Anjou pears. The Anjou is not favored as it has a functional disease and is slow coming into bearing. Nor does Mr. Lewis recommend the Winter Nellis, as it does not produce large fruit in western Oregon.

R. C. Paulus, sales manager of the Oregon Growers Cooperative association, reports the pear pool for this season amounted to \$495,590.47. Bartlett ranked first with sales of \$241,996.97 with the Bosc second, its sales amounting to \$78,211.55. Anjou pears were third with sales of \$56,871.52 and Winter Nellis fourth with sales of \$14,000.00.

And now the slogan is "Use Oregon Products." This applies to prunes and now the Hotel Marion at Salem has Mistland prunes on its menu.

Chinese and Japanese walnuts were selling last month at seven cents a pound wholesale. The meat is dark and often wormy, but the average buyer did not know the difference between the Japanese and the sweet meated Oregon walnuts. Hence the need of a protective tariff.

Senator McNary has wired the Oregon Growers Cooperative association that he will do his utmost to secure a tariff on cherries and English walnuts. Unless there is a tariff, the cherry and walnut industry of the northwest is in for several hard seasons.

C. I. Lewis of the Oregon Growers Cooperative association believes in the future of the apple industry of Oregon. He says history repeats itself in apple crops, and that next year the west may look for a big crop, with a short one in the east.

Although there was the largest pear crop in the United States last year ever known, members of the Oregon Growers Cooperative association received the highest prices on record west of the Cascades. This was due to skillful handling by the association, holding pears in cold storage and awaiting favorable market conditions.

From the Oregon Growers Cooperative association comes this information to those who intend to plant cherries: With the Royal Anne, Bing or Lamberts, which are not only self sterile, but inter-sterile, plant about one-

fourth in Long Stemmed Waterhouse, or some other good pollinizer.

It is now the prune rather than the raisin when it comes to mince-meat. J. O. Holt, packing manager of the Oregon Growers Cooperative association, at the Eugene plant, is making a prune mince-meat much better than that manufactured with raisins by the big packing plants. It is just another way of patronizing a home industry, even if you make your own mince-meat. Use prunes and help Oregon.

The name Mistland, by which brand the Oregon Growers Cooperative association is selling Oregon prunes in New York City, seems to be quite a favorite. Now we have in Salem a Mistland gun club, a Mistland bakery and even a Mistland orchestra.

### DEATH DEFIED IN BROOKS OF BOOZE

WAUKEGAN, Ill., Jan. 11.—Twenty prohibition agents from Chicago made a swift raid here today and turned the gutters into running brooks with some 150,000 quarts of liquor.

The agents wore goggles and were armed with axes. Crowds gathered as casks and barrels were split open. A nearby store did a land-office business in tin cups, but the ax-wielding agents waved the spectators back.

"You'll poison yourselves," shouted the agents. "That stuff is a mixture of every known brand of moonshine and home brew." Some spectators courted death, but no casualties resulted.

### QUICK RELIEF FROM CONSTIPATION

Get Dr. Edwards' Olive Tablets

That is the joyful cry of thousands since Dr. Edwards produced Olive Tablets, the substitute for calomel. No gripping results from these pleasant little tablets. They cause the liver and bowels to act normally. They never force them to unnatural action. Dr. Edwards' Olive Tablets are a soothing, healing, vegetable compound mixed with olive oil.

If you have a bad taste, bad breath, feel dull, tired, are constipated or bilious, you'll find quick and sure results from Dr. Edwards' little Olive Tablets at bedtime.

### FREE TRADE IS KILLING CATTLE BUSINESS U. S. A.

EL PASO, Texas, Jan. 12.—Like T. Pryor of San Antonio dealt vigorously with tariff and other conditions which he declared adversely affected the cattle raising and shipping industry in an address today at the annual convention of the American National Livestock association here. He asserted that the farm and ranch industry "is the very life and vitality" of America.

The farming and livestock interests are suffering from competition with raw material from foreign countries imported duty free, Mr. Pryor declared. "If they are forced to do this then poverty is their heritage—the producers are as much entitled to a tariff on the so-called raw materials as the manufacturers," he asserted.

"Why should they be compelled to sell in a free market and buy in a protected one? It is unjust discrimination."

"We can never prosper long under a system of one-half of free trade, one-half protection, or one-half subsidized and one-half taxed."

Mr. Pryor told of the competition with cheap labor and declared in Japan a man works for as little as 17 cents a day. He said recently trainloads of Chinese had passed through El Paso enroute to Cuba to work on the sugar plantations on a wage basis that meant bankruptcy to American sugar producers forced to compete with them.

He said Australia and New Zealand and other western countries can produce beef at two or three cents a pound owing to cheapness of land and labor while in this country it cost several times as much. The same condition held good as to cotton he said.

The speaker described the cause of uneasiness in the livestock industry as two-fold:

"First the withdrawing of credit by money lenders in a large measure. Second, the unstable condition of the country in general and the fear of importation of meats into this country free of duty."

In conclusion he said income tax records indicated the country has 20,000 millionaires and asked "whoever heard of an honest to God millionaire farmer?"

### REPORT LENINE TO BE SERIOUSLY ILL

NEW YORK, Jan. 11.—Nikolai Lenine, premier of the soviet government of Russia, is dangerously ill at Moscow, according to a wireless message today from Berlin to the Jewish news bureau here. The message said three German specialists are on their way to Moscow for consultation.

Noted Banker Dead. LONDON, Jan. 11.—John Blair McAfee, banker and director in many corporations and widely known in the United States, died today following an operation. He was chairman of the board of directors of the British-American Continental bank which suspended payment January 6.

### LADIES! LOOK YOUNG, DARKEN GRAY HAIR

Use the Old-time Sage Tea and Sulphur and Nobody Will know.

Gray hair, however handsome, denotes advancing age. We all know the advantages of a youthful appearance. Your hair is your charm. It makes or mars the face. When it fades, turns gray and looks streaked, just a few applications of Sage Tea and Sulphur enhances its appearance a hundred-fold.

Don't stay gray! Look young! Either prepare the recipe at home or get from any drug store a bottle of "Wyeth's Sage and Sulphur Compound," which is merely the old-time recipe improved by the addition of other ingredients. Thousands of folks recommend this ready-to-use preparation, because it darkens the hair beautifully, besides, no one can possibly tell, as it darkens so naturally and evenly. You moisten a sponge or soft brush with it, drawing this through the hair, taking one small strand at a time. By morning the gray hair disappears; after another application or two, its natural color is restored and it becomes thick, glossy and lustrous, and you appear years younger.

Wyeth's Sage and Sulphur Compound is a delightful toilet requisite. It is not intended for the cure, mitigation or prevention of disease.

### CROSSED WIRE LEADS TO ROBBERY, MURDER

OMAHA, Neb., Jan. 11.—A crossed telephone connection yesterday, by which detectives got a pool hall on the line instead of the number requested, supplied the police with information on a contemplated robbery that led to the shooting to death by a detective last night of an intruder who entered the home of Mrs. William Crutcher, police said today.

Ship in Distress. NE WYORK, Jan. 11.—Wireless distress signals calling for help "at the first possible moment," were picked up here early today from the Norwegian

### H. S. STUDENT JURY BARS RINGER F. B. ATHLETICS

CHICAGO, Jan. 11.—The Hyde Park high school student jury, weighing testimony in the school's football scandal today reported to Principal H. B. Loonala their recommendation that the football players permitting a "ringer" to play with them in the Lansing, Mich., high school football game last fall be barred from athletics.

The jury was composed of twenty students, some of them girls. cargo steamship Ontoneda, between 1200 and 1500 miles from New York.

### "Try It Out Yourself" says the Good Judge

And you will find how much more satisfaction a little of this Real Tobacco gives you than you ever got from a big chew of the ordinary kind. The good, rich, real tobacco taste lasts so long you don't need a fresh chew nearly as often. So it costs you less. Any man who uses the Real Tobacco Chew will tell you that.

Put up in two styles

W-B CUT is a long fine-cut tobacco RIGHT CUT is a short-cut tobacco

Weyman-Britton Company, 1107 Broadway, New York City.

### We Do Not Believe

that there is any remedy as suitable as Peckham's for all croupy conditions peculiar to small children. ONLY AT

HEATH'S DRUG STORE The San Tox Store

### FEEDS Mixed in Medford

At last we are putting out our own feeds mixed according to O. A. C. formula, and can sell them at the following prices, f. o. b., warehouse:

F. B. Scratch	\$58.00 per ton. Per cwt.	\$3.00
F. B. Egg Mash	\$70.00 per ton. Per cwt.	3.60
F. B. Hog Eats	\$53.00 per ton. Per cwt.	2.75
F. P. Pig Grow	\$54.00 per ton. Per cwt.	2.80

Ground feeds at correspondingly low prices. Custom grinding 15c per cwt. GIVE OUR FEEDS A TRIAL Farm Bureau Co-operative Exchange Phone 932 4th and Fir Sts.

### Nursery Stock Highest Grade

32 years in Oregon—Better Now than ever.

Don't worry about Pear Blight. We have the remedy for delivery next fall—The Blight Resistant Stock.

Notice also some of our prices for immediate delivery, all freight prepaid to your station. Italian Prunes 4 to 6 ft. at \$40 per 100, or \$360 per M Italian Prunes, 3 to 4 ft. \$35 per 100, or \$315 per M Italian Prunes, 2 to 4 ft. at \$20 per 100, or \$180 per M All Pears—Bartlett, Bosc, Comice, D'Anjou, etc at \$75 per 100.

We have everything in Fruit, Shade, Nut, Ornamental and Dwarf Trees; all kinds of Berries, Etc., suitable for Southern Oregon. Mail orders a specialty. Write now to

Albany Nurseries (Branch) Grants Pass, Ore

### SPECIAL MEETING

Friday Night 7:30 o'clock

American Legion Hall

For purpose of consideration of the proposed state plan of adjusted compensation.

Full attendance is requested.

F. P. FARRELL Commander. COL. HOLMES Adjutant.

### BE CORRECT

In making your returns for INCOME TAX The information contained and schedules submitted must be sufficient to satisfy government inspectors who examine returns and who may be sent to verify your accounts. SEVERE PENALTIES may be inflicted for DELAYS and for IMPROPER income returns.

OUR INCOME TAX SPECIALIST may be able to save MONEY for you in preparing correct schedules. We have associated with us this year

MR. J. C. CONES who is an expert accountant and INCOME TAX SPECIALIST with many years of experience.

We urge the preparation of your returns
