

WRITE HISTORY ASHLAND LEGION IN WORLD WAR

ASHLAND, Mar. 18.—The chronicles of Ashland Post No. 14, American Legion, are to be compiled, the work to be done in a thorough manner. Ralph Hadfield is official historian, and there will be no haphazard methods employed in the record. The co-operation of relatives of all ex-service members is requested, in order that the archives may be complete and reliable. Not only military data will be obtained, but naval and civil details as well, to the end that the annals may cover the entire range of the average ex-service man's career. This does not imply that individual records will be devoted to reciting fulsome adulation or exploiting personal traits, conciseness will be the rule, the intent being to have the historical summary brief and exact. In the light of these developments, the annals of "Who's Who?" as applying to our local soldiers and sailors in the great world war will be interesting reading not only to the present generation but even more so to future ones.

"Flashes of Action," referring to films in connection with activities of the United States Signal Corps, will be exhibited here under auspices of Ashland Post, on or about April 13 and 14, specific information to be furnished later. These films are not merely "parade" features, but delineate the details connected with real action by this important auxiliary to army operations in France during actual fighting engagements. Many of the boys will quickly recognize and translate the code as employed by the skillful and intrepid signal corps in connection with duties classified as "extra hazardous." Don't fail to witness a reproduction of these familiar scenes.

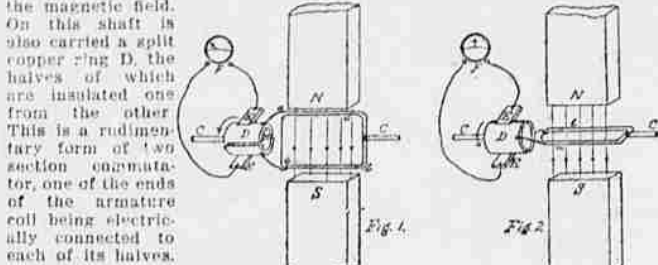

The official charter for the Women's Auxiliary to Ashland post is expected to arrive soon. A score or more applicants for membership are already enrolled. Wives, mothers, daughters and sisters of ex-service men are eligible, consequently the list even as applying to the prospective local unit is a formidable one as to enumeration. A meeting will be called as soon as the charter arrives, to perfect a permanent organization.

This early in the season arrangements are under consideration for the observance of Memorial day, May 30. The date falls on Monday. Very appropriately, the rank and file of Ashland post, including its Women's Auxiliary, will ably reinforce the Grand Army and Relief Corps bodies in striving for a typical observance of the occasion, a holiday in the patriotic calendar which implies tributes of respect and honor. Following Grand Army precedents, markers will also be placed on the graves of ex-service men, and some have recommended an experiment by way of transplanting the poppy from Flanders Field, its native habitat, to local cemetery surroundings.

HINTS FOR THE MOTORIST BY ALBERT L. CLOUGH

Copyright 1920, by The International Syndicate. The Generator

THE GENERATOR THAT CHARGES THE MOTOR CAR storage battery, to supply ignition starting and lighting current, is simply a very small dynamo, identical, in principle, with the large ones used in electric light and power stations. It takes a very small amount of driving power from the gasoline engine and changes it into electrical energy, in the form of a direct or continuous electric current—one that flows in one direction constantly and is thus suitable for battery charging. Like the induction-coil and the magneto, it is a device by means of which magnetism is made to produce electric current. Whenever wires are suitably moved between the poles of a magnet there is a tendency for current to be produced in them and it is said that the cutting of lines of magnetic force by a moving wire generates an electrical pressure in the wire. Lines of magnetic force are imaginary lines drawn from the north to the south pole of a magnet to show the direction in which the magnetism is acting. If a wire is moved parallel to these lines it does not cut them and no current is produced in it, but if it is moved across them it does cut them and current is produced. The direction of flow of the current reverses with the reversal of the direction of motion of the wire. The dynamo electric generator is merely a power driven device in which wires are made to cut lines of magnetic force between magnetic poles. In the diagrams reproduced herewith N and S are the two poles of a magnet and between these poles, in the space where the magnetic force is acting—in the "field" set up by the magnet—is placed a rectangular coil here shown as consisting of two turns of copper wire. This is a rudimentary form of an armature coil and is mounted on the shaft C, so that it can be rotated in the magnetic field.

On this shaft is also carried a split copper ring D, the halves of which are insulated one from the other. This is a rudimentary form of a commutator, one of the ends of the armature coil being electrically connected to each of its halves. The commutator and armature coil turn together on the shaft and stationary brushes E bear upon the commutator at points diametrically opposite and nearly opposite the two poles of the field magnet. A wire is attached to each brush, to convey away the current generated through the armature F. Imagine that the armature coil is standing as in Fig. 1, with its plane in the axis of the magnet and in the plane of the lines of force. If the shaft is turned in the direction of the arrow the wire aa will cut across the lines of force and an electrical pressure will be generated in them. Wires bb will also cut the lines but in the opposite direction and the electrical pressure in them will act in the opposite direction to that in aa which will result in a current flowing through the rectangular coil, through the commutator, brushes and the external circuit, which current will continue to flow until the armature coil, in its rotation, comes into the position shown in Fig. 2. Wires aa are then moving straight downward and wires bb are just commencing to move upward and all of them are moving directly along the lines of force and, for the instant, not cutting across them at all and therefore there is no electrical action in them and the current stops. The commutator has by this time moved so that the brushes are on the gaps between the segments, just passing from one to the other so that the circuit is broken. Imagine the rotation to continue from this Fig. 2 position. Wires aa and bb no longer move exactly along the lines of force but begin to cut across them, but to cut them in the direction opposite to that of the first quarter rotation and thus current reverses in them and would reverse in the outside circuit were it not for the commutator. As the Fig. 2 position is passed both commutator segments pass from under one brush into contact with the other brush, thus reversing the brush to which each end of the armature coil was connected, which counteracts the change of current direction in the coil and insures a constant current direction in the outside circuit. Each half rotation from the Fig. 2 position produces a flow of current, ceasing momentarily as the commutator segments change brushes and the operation continues indefinitely in this way, by using a large number of coils, spaced at equal angles like the spokes of a wheel, and turned by the same shaft, together with the requisite number of commutator segments, a steady current may be produced in the outside circuit. The faster the armature coils are rotated, the larger the number of wires in each coil and the stronger the magnetic field, the more powerful is the current generated and, in order to strengthen the magnetism the space between the magnet poles and within the armature coils is filled with a soft iron core, through which the magnetic influence can act much more powerfully than through an air space. This is accomplished by mounting a cylinder of soft iron upon the shaft, of such size and shape as to just run with slight clearance between the concave faces of the magnet poles and winding the armature coils in equally spaced lengthwise slots in the cylindrical surface of this cylinder or "core."

Question of general interest to motorists will be answered in this column, space permitting. If an immediate answer is desired, enclose self addressed, stamped envelope. Address Albert L. Clough, care of our office

RESTORATION OF EMPEROR CHARLES GOES GLIMMERING

VIENNA.—(By the Associated Press)—If monarchism is to come to Austria it must, like bolshevism, come from without. This is the opinion of men whose business it is to watch and weigh royalist activity. That there is royalist activity goes without saying. Carl (formerly emperor) and his followers, the little court of semi and demerol and near royalty and adventurous gentlemen, of many nationalities he has about him in Switzerland, still intrigue and plot and perhaps hope. Here in the other succession states a portion of the old aristocracy and great land owners and military swashbucklers keep up a more or less concealed restoration movement, but on the whole the monarchic sentiment is decaying. It dies hard because it has powerful support in Austria from sources that come into intimate contact with the people in their daily life and from exterior quarters as well, but observers say it has lessened decidedly in the past six months.

They attribute that condition to several causes. The royalist leaders are, to say the least, hardly an enterprising or very daring lot and also they are unable enough to realize that even an anointed Hapsburg must have a treasury to successfully run a government and would present a sorry spectacle with bankrupt Austria and an estranged entente. Then the assiduous propaganda and teachings of the socialist and other liberal elements have begun to take effect on the great body of the peasantry, always considered the backbone of the royalist movement.

From this statement may be expected the provinces of Upper Austria, Tyrol and Vorarlberg. According to the best information the monarchist movement still centers there, and the mass of the peasant population supports it. This may be attributed to the fact that these provinces lie open not only to the direct efforts of the Catholic propaganda from Switzerland, but the equally strong monarchic emanations from Bavaria. While it has been two years of hard sledding for the republic as a whole and apparently there is a very rough road still ahead, the agrarian element has not been very badly off at any time. The farmers have made more money than they can spend and none of the many governments up to now have been able to take any very considerable part of it from them by taxes.

INDIANS REVOLT IN BOLIVIA HIGHLANDS

BUENOS AIRES, Mar. 18.—Indians living in the high table lands of Bolivia have risen against the Bolivian government and a native chief has proclaimed himself president of the Indian tribes, says a La Paz dispatch to La Nación.

Several encounters between the insurgents and provincial forces have resulted and several persons have been killed and wounded. Bolivian troops are reported to be on the way to suppress the revolt.

Adult rhinoceroses always have two horns.

COMB SAGE TEA IN HAIR TO DARKEN IT

It's Grandmother's Recipe to keep her Locks Dark, Glossy, Beautiful.

The old-time mixture of Sage Tea, streaked and faded hair is grandmother's recipe, and folks are again using it to keep their hair in good, even color, which is quite sensible, as we are living in an age when a youthful appearance is of the greatest advantage. Nowadays, though, we don't have the troublesome task of gathering the sage and the mussy mixing at home. All drug stores sell the ready-to-use product, improved by the addition of other ingredients, called "Wyeth's Sage and Sulphur Compound." It is very popular because nobody can discover it has been applied. Simply moisten your comb or a soft brush with it and draw this through your hair, taking one small strand at a time; by morning the gray hair disappears, but what delights the ladies with Wyeth's Sage and Sulphur Compound, is that, besides beautifully darkening the hair after a few applications, it also produces that soft lustre and appearance of abundance which is so attractive. This ready-to-use preparation is a delightful toilet requisite for those who desire a more youthful appearance. It is not intended for the cure, mitigation or prevention of disease.

GLASS OF SALTS IF YOUR KIDNEYS HURT

Not less meat if you feel Backachy or have Bladder trouble—Salts fine for Kidneys. Meat forms uric acid which excites and overworks the kidneys in their efforts to filter it from the system. Regular eating of meat must flush the kidneys occasionally. You must relieve them like you relieve your bowels; removing all the acids, waste and poison, else you feel a dull misery in the kidney region, sharp pains in the back or sick headache, dizziness, your stomach sour, tongue is coated and when the weather is bad you have rheumatic twinges. The urine is cloudy, full of sediment; the channels often get irritated, obliging you to get up two or three times during the night. To neutralize these irritating acids and flush off the body's urinous waste get about four ounces of Jad Salts from any pharmacy; take a tablespoonful in a glass of water before breakfast for a few days and your kidneys will then act fine and bladder disorders disappear. This famous salts is made from the acid of grapes and lemon juice, combined with lithia, and has been used for generations to clean and stimulate sluggish kidneys and stop bladder irritation. Jad Salts is inexpensive; harmless and makes a delightful effervescent lithia-water drink which millions of men and women take now and then, thus avoiding serious kidney and bladder diseases.

FARM VALUES INCREASE WEST, DECREASE EAST

WASHINGTON, Mar. 18.—The decline in the price of tobacco last year had its effect on the value of Kentucky land, the department of agriculture reported today in announcing that the average price of low land in Kentucky in 1920 was \$53 an acre as compared with \$79 an acre in 1919. Iowa has the highest priced land, the department said, the average value of tillable land in that state last year being \$200 an acre. The western states showed the least decline last year in the prices of land and in the cases of California, Oregon and Colorado there was a slight increase over the preceding year. Plow land in California was valued at \$139 an acre in 1920 as compared with \$130 in 1919.

"DANDERINE" Girls! Save Your Hair! Make It Abundant!

Immediately after a "Danderine" massage, your hair takes on new life, lustre and wondrous beauty, appearing twice as heavy and plentiful, because each hair seems to fluff and thicken. Don't let your hair stay lifeless, colorless, plain or scraggly. You, too, want lots of long, strong, beautiful hair. A 35-cent bottle of delightful "Danderine" refreshes your scalp, checks dandruff and falling hair. This stimulating "beauty-tonic" gives, to thin, dull, falling hair that youthful brightness and abundant thickness—All druggists

The New Mailed Fist

Germany's coveted place in the sun has been taken by Japan. The mikado and the elder statesmen occupy the seats of the mighty that the kaiser and his court risked their empire to gain. Silently, shyly Nippon entered the family of nations; politely, pleasantly she took a seat in the corner; then Russia stepped on her toes, and from that time forth Japan has sought to dominate the Oriental world.

Insofar as history can be read at the present, Japan's entrance into the World War was selfish in the extreme. Of all the allied countries battling against Prussiaism, Japan went in solely to acquire territory for the least cost. She paid almost nothing in treasure and blood, and her reward was the richest any allied country received.

Belgium, France and England were attacked by a ruthless foe and had to fight with all their might for existence; Russia was assaulted for daring to protect Serbia, which had been marked for slaughter by Austria and was to be made a part of the dual empire; Italy had to fight on one side or the other to hold her position in Europe, so selected to battle for decency; America went into the war to save civilization.

The daily Associated Press dispatches prove the statement that Japan went into the conflict solely for plundering purposes. The mikado had started to destroy China before the Huns burned Louvain, but the big war gave the Nipponese the opportunity they had been trying to make. The finishing touches were put into the stealing of Korea from the Koreans. Very important islands controlling the approaches to the Philippines were marked with the scarlet seal of Salsanna.

The capture of Tsing Tau and the theft of Shantung were made with less cost in lives and men than any road on the western front made solely to get needed bits of local information. And yet, on the strength of those slight losses in taking the German fortifications along the ancient shores of Cathay, Japan now claims a very rich section of China, the right to

dominate the government of the entire country and the ownership of all the islands in the North Pacific that once belonged to the German empire. It is as though the United States would lay claim to all the Rhinelands for having won the battle of Cantigny. But the mikado holds that the work of his rodments and cruisers in getting what they wanted when they wanted it was of such vast import that he must be paid with China, Korea, Manchuria, a large part of Siberia and the former German islands of the North Pacific. Six months ago this statement would not have been made by a conservative American observer. He would have said, "Just give Japan time to adjust herself and she will keep her promises to restore Shantung to China and she will withdraw her divisions from Siberia; she will also give the Koreans a measure of home rule." But the Nipponese are more strongly entrenched in the territories they grabbed than ever before. The Japanese parliament recently passed an army and navy bill that will add to the empire's armed strength many fold. This same parliament voted by an overwhelming majority against disarmament. Troops have been pouring into Siberia and reports state that there is feverish activity in the navy yards of the empire. We do not say that Japan is preparing to declare war on any Occidental country. We think she wishes to avoid war with a powerful enemy, but she is going to keep what she has and get everything more that's possible to get in the Orient—Portland Telegram.
