This beautiful seven passenger Lincoln is hard driven but it gets very good care. Blodgett keeps it running sweetly on Shell 400

Notice the cars at Shell stations. Cars that show care—not all new or expensive makes by any means, but driven by thoughtful people who know the sound value of Shell 400, the "dry" gas

# Here is BLODGETT'S slant on gasoline

... one reason why the James H. Cheeks are envied for their chauffeur!

H. J. Blodgett, chauffeur to Mr. James H. Cheek

SOUTHERNERS—distinguished southerners like James H. Cheek, son of the founder of Maxwell House Coffee—have a reputation for hospitality that is richly deserved. Even their household affairs seem to run more smoothly!

And people in the exclusive district in which the Cheeks live actually envy them the driver of their fine cars. Blodgett is never late; his cars purr silkily while theirs are being overhauled; the Cheeks never have automobile worries.

"How do you keep those motors running so sweetly?" other drivers ask the Cheek chauffeur.

"A lot of it is in the gasoline," Blodgett confesses. And he tells how he avoids crankcase dilution by using "dry" gas. He learned it from a lubrication man who once showed him how thin motor oil could really get—like water or kerosene—thinned from "wet" gasoline. "And you can't expect even a high-priced automobile to run very long on oil like that!"

It is now a well recognized fact that oil dilution from "wet" gasoline is one of the most serious menaces to automobile motors. Manufacturers and dealers, lubri-

cation men and expert mechanics are constantly sending out warnings.

And today there is no need of using "wet" gasoline. Shell 400, the "dry" gas, exactly refined to eliminate heavy, "wet" petroleum fractions, goes completely vaporized into your motor. No condensing droplets run down the cylinder walls. All of it goes into power and mileage—full value for your gasoline money.

Yellow and red pumps identify Shell 400, the "dry" gas. Thousands of convenient stations sell it.

IMPORTANT TO EVERY MOTORIST—the kind of gasoline

Here is a typical example of old crankcase oil after "wet" gasoline was used. Oil 54% gasoline—ruined long before it had run a thousand miles

Shell 400 in the same car would dilute your oil very little. Perhaps 8% or 9% in a full thousand miles—not enough to hurt its lubricating qualities

## SHELL 400 The "DRY" gas

New high-compression motors have no room for the hard carbon that comes from burned motor oil. It is important that you use an oil that forms no hard carbon. Shell Motor Oil leaves only a little soft soot that blows easily away
