

FOOD HANDLING IN YOUR HOME

Use of left-over foods in an economical and attractive way is covered in a very interesting manner in "Food Handling in the Home," a special seven-cent booklet published by the National Food Preservation Corporation in connection with the national food preservation campaign being conducted this month by the refrigeration industry.

Salads, soups, stews and other vegetable combinations in almost countless variety may be made from left-over foods which have been kept fresh and tasty. Bouillon, orange juice, and vegetables held at a temperature of 42 degrees can be kept from ten to fifteen days, it is pointed out.

"Proper arrangement of food in a refrigerator, so that space can be utilized to best advantage is covered in one chapter. Considerable space is devoted to discussion of food preservation during the winter months," says Mr. Cunningham, of the Peoples Electric company, local dealers.

"A feature of the booklet is an authoritative article on points to consider in selection of a mechanical refrigerator. Another chapter sets forth a large number of recipes covering the preparation of desserts and salads to be frozen in an electric refrigerator."

The booklet contains also the complete rules covering a \$25,000 national idea contest for an essay on "why 50 degrees is the danger point." Refrigerate dealers who are distributing the booklet are ready to aid any one interested in the national contest by providing them with all the information needed to participate in the competition.
