

LONE SOLON OF STATE OPPOSED IN PRIMARIES

Only Rep. Korell of Portland Worried in Preliminary—McNary, Hawley and Butler Have Easy Time.

PORTLAND, Ore., May 3.—(AP)—Both republican and democrats are scrambling for the party nomination for governor in the Oregon primary, May 16, and a three-cornered race is on for the nomination for U. S. representative in the third (Portland) district.

An even half dozen republicans seek the nomination for governor. Governor A. W. Norblad is opposed by John A. Jerry, Charles Hall, Henry Corbett, J. B. Bennett, and George W. Joseph.

Four democrats have qualified for the gubernatorial primary. They are Edward P. Bailey, A. C. Hough, Ed S. Piper, and George R. Wilbur.

Senator Charles L. McNary, republican, is unopposed for renomination.

The congressional fight among republicans in the third district involves Franklin F. Korell, now a member of the house from the district. L. B. Sandblast, a wet, and Robert Gordon Duncan, an oppose Korell.

Willis C. Hawley, republican, and representative in congress from Oregon since 1907, is unopposed, as is Robert R. Butler, republican, members of the house from the second district.

There are two candidates for national committeeman on each ticket. Ralph E. Williams, republican national committeeman, is opposed by Charles E. Walker of Portland. Oswald West, member of the democratic national committee, has former governor Walter M. Pierce as a contender.

FIRST QUARTER YEAR WAS RECORD BREAKER FOR FRIGIDAIRE

General indications that 1930 will be an unusually prosperous year for the electric refrigeration industry have encouraged Frigidaire corporation, leading manufacturers of household electric refrigerators and commercial equipment, to launch the largest selling campaign in its history, according to A. B. Cunningham of the People's Electric store, local dealer.

"The first quarter of the year," he said, "established a record for this season, and today there are more men employed in the Dayton, Ohio, factories of this General Motors subsidiary than at this time last year. Twice as many people visited Frigidaire showrooms throughout the country during March as in the corresponding month of 1929."

"A million dollar newspaper advertising campaign, the largest single newspaper campaign ever launched by this company, will be used this spring to bring to the public's attention the many advantages of owning a Frigidaire."

"This electric refrigerator, which has passed every possible refrigeration test, is being subjected to the heat test to impress the public with its superiority. In the local display window, as well as Frigidaire show windows throughout the United States and Canada, Frigidaires will bear the scorching heat of a battery of electric heaters. While the porcelain-on-steel exteriors are so hot one hardly can touch them, ice cubes are being frozen within and the temperature in the food storage compartment is at 45 degrees, well below the 50 degree danger mark above which food spoils.

"As mid-winter weather is the only real test for a furnace, so the heat test is the most exacting to which an electric refrigerator can be put. Frigidaire's surplus power and construction of proven superiority enable this electric refrigerator to withstand this test."

Billion Increase in Manufacture of Cigarettes

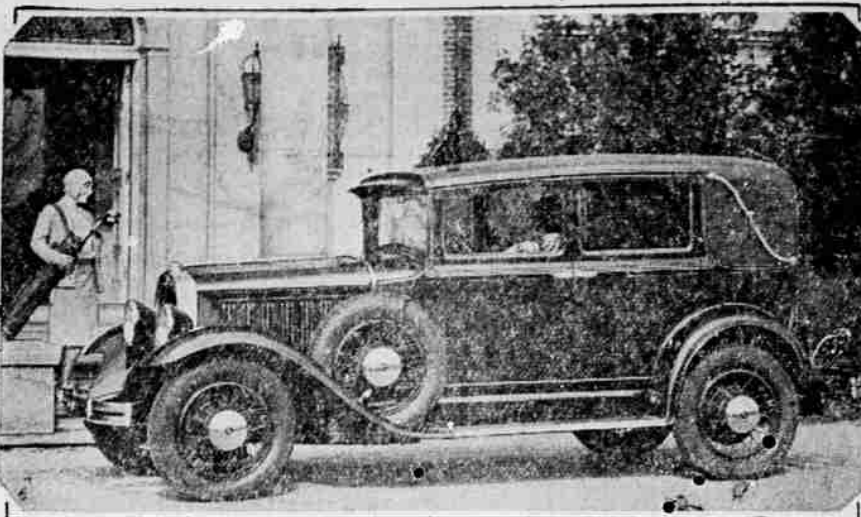

A billion more cigarettes were made in the United States during the first quarter of 1930 than during the corresponding period of last year, according to government figures.

"Introduction of modern methods of manufacture which remove harmful irritants by toasting is responsible for this continuing increase in the manufacture of cigarettes which during March showed an increase for the twenty-third consecutive month," says a tobacco official.

Production during March was 3,165,174,000 as compared with 2,165,174,000 for March last year. The total production so far this year has been 27,938,411,000 compared with 26,912,272,000 during the first quarter of 1929, or an increase of 3.8 per cent. Total production in 1929 was 119,000,000,000.

The late rise and the milk companies of Battle Creek, Mich., are in accord. The milk distributors have petitioned for an ordinance prohibiting delivery before 5 a. m.

Erskine Landau Smart Model

The Dynamic New Erskine Landau offers the smartness of a sport model with the roominess of a family car. Silken smoothness characterizes the power flow of its 70-horsepower motor, contributed by such engineering features as Lanchester vibration damper and new full-power muffler. Six wire wheels, two in front fender wells, and luggage rack, are standard. Interior details include adjustable front seat and steering wheel, padded arm rests, dome light, heavy tonneau carpet and polished robe and foot rail. Upholster is in broadcloth.

Gary Cooper in "Only the Brave"

Gary Cooper, recently seen and heard in the title role of "The Virginian," is doing his gallant again at the Fox Rialto theatre in a thrilling play, "Only the Brave." For many a feminine heart the foregoing statement, brief as it is, will no doubt be sufficient recommendation to this newest offering.

But in case there are any doubts, it must be added that "Only the Brave" shows Cooper to a better advantage, far better, than his previous satisfactory best. There is something about this tall, manly Montana youth that seems to mark him as the most perfect American type. He is virile and gallant, but yet not given to thunderous outpourings of unseemly emotion. His quiet courage inspires hero-worship in the hearts of all who behold him and hear him in his masterful work upon the talking screen.

Paramount chose wisely when it selected Mary Brian as the

sweetheart of Gary Cooper in this picture. Their tremendous success as the lovers in "The Virginian" found great favor with film fans everywhere.

MOSCOW, May 2.—(AP)—A government survey revealed that the Soviet union has 1,195 legitimate theaters of which 325 are in Russia proper and 267 in the Ukraine. In addition there are numerous village theaters and workmen's clubs with their own troupes of professionals.

Small fight clubs of New York, once the backbone of the cauliflower industry, are slowly but surely being driven to the wall. Only the St. Nicholas Arena remains a popular rendezvous for the one- and two-dollar boys.

CASABLANCA, May 2.—(AP)—Completion of the great Mellan dam is expected to permit cultivation of much rich soil near here and result in more and better spring vegetables for export to Paris.

NANKING, May 2.—(AP)—The Chinese nationalist government

has purchased 6,000 Japanese cherry trees to plant around the tomb of Sun Yat-Sen in an arrangement similar to that of the cherry trees around the tidal basin in Washington.

A working model of the proposed dam across the Mississippi river at Davenport, Iowa, built by the University of Iowa engineering school, is 41 feet long.

Texas have appointed a board to start plans for making the Guadalupe river navigable.

FIRESTONE RUBBER CO. DEVELOPING LIBERIA RUBBER PLANTATION

Africa's jungle is now within a split second's time of the United States and other parts of the world, Harvey S. Firestone, Jr., president of the United States-Liberia Radio corporation, announced today.

This company is licensed to operate the utility by authority of the Federal Radio commission and the Republic of Liberia.

Short-wave service to Liberia with Akron as the terminus, is now in operation and radio experts consider the system one of the most efficient in the world. Several years of intensive experimenting were necessary before the service was put into operation.

Messages may be given to any Western Union office in the United States for transmission to Liberia by the United States-Liberia Radio corporation system. In addition to the United States, messages may be sent to Liberia from practically all parts of the world and the same service is available in Liberia.

Liberia, with the exception of Haiti, is the only negro republic in the world. It lies on the west coast of Africa between French Ivory Coast and Sierra Leone and is within 400 miles direct sailing distance from New York. Approximately 42,000 square miles in area, the country is roughly the size of Ohio.

The Firestone company is developing a 1,000,000-acre rubber plantation in Liberia. Started five years ago, the first rubber from the newly planted areas will be harvested this fall, according to Mr. Freeman of the Older Tire

Service, local Firestone dealer. Liberia is a vast, changed country since Harvey S. Firestone decided that the African republic was one of the best places in the world to grow rubber.

A new interest has been taken by Liberians in their progress: churches, schools and hospitals have been built, work has been provided for thousands of natives, and public road mileage has tripled.

Liberia was settled in 1821 amid difficulties greater perhaps, according to Liberian students, than the Pilgrim Fathers experienced landing in America. The first settlers who sought to colonize on the west coast of Africa, under the auspices of the American Colonization society, called their first settlement "Monrovia." In honor of President Monroe. Monrovia is still the capital of Liberia.

LEIPZIG, May 2.—(AP)—Imitating the manufacturer of artificial honey who put a dead bee in each jar to make it look natural, an exhibitor at the fair here shows a machine for printing circulars which overprints some characters to make them look like real typewriter errors.

STRASSBURG, May 2.—(AP)—The French Society for Propagation of Esperanto, with headquarters here, asserts that talking movies and discussion of Aristide Briand's scheme for the United States of Europe, have given fresh impulse to the manufactured, international language.

If he wears a pained and solemn air, and appears to be deep in thought, don't disturb him. Maybe he is trying to think up another reason why the Literary Digest's prohibition pill doesn't mean anything.—Macon Telegraph.

The Mexican army soon will be equipped with all Mexican made armament. American, European and Japanese arms now in use, will be used as reserve supplies.

Daring Novel On Talking Screen

Norma Shearer's ability as an actress capable of handling difficult emotional roles is again vividly demonstrated in her newest talking vehicle, "The Divorcee," which is now playing at the Fox Craterian theatre. In this picture, adapted from a story by Ursula Parrott, the attractive star plays the part of a woman whose attempts at showing her husband that there is a double standard for women as well as men result in utter disaster. The supporting cast includes Conrad Nagel and Robert Montgomery.

CHANGE SPARK PLUGS EVERY 10,000 MILES

CHAMPION

NATIONAL CHANGE WEEK

may 5th to 11th

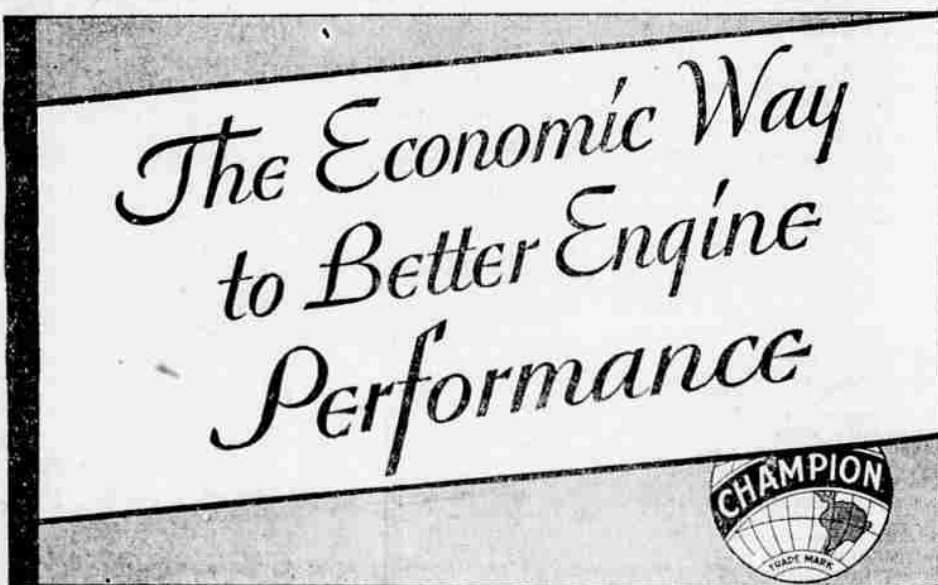

CHAMPION SPARK PLUGS

MANY of our customers need no inducement to change their spark plugs every 10,000 miles, other than the assured continuation of the better performance which this change means to every engine.

This is Champion National Change Week. First established six years ago, it is now a yearly reminder to motorists throughout the city to share in the benefits enjoyed by changing to a new set of Champions every year.

Last year all our customers who installed new Champions at the 10,000 mile mark secured more power and speed, faster acceleration, and all-

around better performance and economy for an entire year.

This change actually cost them nothing, for new Champions save their price in less gas and oil alone.

All motor car manufacturers recommend that car owners change their spark plugs every 10,000 miles, and millions do so, just as they change their oil at more frequent intervals. They do this because they recognize the transition to which every spark plug, no matter how well made, is subject in modern high speed, high compression engines.

The insulator becomes carbon encrusted and the electrodes corroded through pitting and burning. This diffuses and weakens the spark. Combustion is not complete. Gas is wasted

and seeps by the pistons to dilute the oil. Power is lost. The engine becomes sluggish. Speed is impaired.

New spark plugs change all this. There is more complete burning of the gas. Power is increased. Sluggishness is gone as the engine picks up more rapidly. Speed is restored.

Although Champions will continue to function almost indefinitely, there has always been economy in changing them every 10,000 miles, or at least once a year. The economy of continuing Champion's better performance, of the saving in gas and oil, of freedom from trouble—all these are achieved.

Bring your car to us, have a complete set of Champions installed, and enjoy better performance for the next year.
