Today's car receipts: Wheat 170; flour 12; corn 3; hay 4.

Wall Street Report

NEW YORK, Jan. 5.—(AP)—Good cheer still prevailed in the financial markets at the start of the week. Last week's 19-point advance as measured by the average of 90 issues was still enough to bring considerable profit-taking into the share market and to tempt bears to try for a technical reaction, but news from Washington of partial modification of the packers' consent decree bolstered the list after the first hour.

PUPILS ARE DULL IN CHILLY ROOMS

LONDON (AP)—How warmth affects dexterity of children in school is revealed in a report of the Industrial Health Research board. It was found that where the cooling power of the air fell to a certain point, children were so cold that their manual dexterity was considerably reduced, especially when they were seated for one and three-quarters hours at a time.

NEW INSTRUMENTS REDUCE HAZARDS FOR LAB WORKER

WASHINGTON (AP)—Hazards of working conditions have been practically overcome by the invention of standards in making research for scientists.
Ultra-violet and infra-red rays, X-ray, radium, and mercury poisoning are among hazards eliminated in a bureau which employs more than 1,000 scientific workers.
Goggles with glasses containing cobalt and ceria protect their wearers from ultra-violet and infra-red rays.
Radium substances are kept in heavy safes when not in use and lead blocks are employed as a screen against the rays when working with radium. The tubes are handled with tongs.
A sensitized photograph film, wrapped in opaque black paper and carried by a worker, tells whether he is being exposed to the dangerous gamma rays. Development of the film denotes exposure.
An instrument capable of detecting one part of mercury vapor in about 200,000,000 parts of air guards against danger from this source.
Springfield—Two residences under construction here.

HAWAII DEVELOPS A NEW COMPOUND TO CURE LEPROSY

HONOLULU (AP)—A new kind of chemical compound from chaulmoogra oil, which may revolutionize existing systems of leprosy treatment, has been produced at the University of Hawaii.
Previous chaulmoogra oil derivatives have not been soluble in water and they were oily in their characteristics.
Dr. Richard Wrenshall, professor of chemistry, has been in charge of the experiments and results of the experiments on dogs has been transmitted to Gov. Lawrence M. Judd.
The nearest approach to a specific for leprosy thus far discovered has been chaulmoogra oil, the report says, and with it it is possible for the new derivative to enter the blood rapidly.
The report expresses the hope that a step thus has been accomplished in the age-old campaign to cure leprosy.
Before the new specific is applied to humans more experiments on animals will be conducted. No decision has been reached by Governor Judd to introduce the compound at the Kalaupapa leper settlement on the island of Molokai.
The discovery has been presented fully to the physicians at the settlement, however, with a view to its use as a cure for leprosy, provided further investigation bears out the impressions that already have been gained.

Administrators' Notice to Creditors

In the County Court of the State of Oregon for Jackson County, In the Matter of the Estate of Zach Cameron, Deceased.
