

# TRUNK SEWER NECESSITY IS POINTED OUT

Reasons why it is necessary for the city of Medford to build a new trunk sewer line from the Cottage street bridge to the disposal plant were outlined today by the city council health committee, as follows:

...before Bear creek can be cleaned up and beautified through the city, it is necessary to eliminate the outfall from four septic tanks now dumping sewage direct into Bear creek. One of these tanks is located just above the Cottage street bridge on the west bank of the creek, and is serving the South Sea addition. Two tanks now serve the Merrick camp ground and the old tank built in 1909 located in the rear of the Gaddis and Dixon property was built for the purpose of serving the business district. All of the above septic tanks are too low to discharge the effluent into the Riverside trunk sewer.

**Riverside Trunk Sewer**  
The present trunk sewer from the intersection of East Jackson and Riverside avenue running north along Riverside avenue to the septic tank is running to capacity with sanitary sewage only. No additional capacity is available for storm water. The run-off from the streets of an area of 1570 acres must pass down this line; it being unable to carry the storm water during the rainy season, the raw sewage flows down the gutters.

This line was constructed in 1910 for the use of sanitary sewage to serve a population of 10,000 people. Our present population is 11,200 people. This line is 21 years old.

**East Side Trunk Sewer**  
The present sewage from the East side is diverted into the Riverside trunk sewer at the intersection of Jackson and Riverside avenue. This line is suspended on cables to the Jackson street bridge. It is necessary to cut the raw sewage direct into Bear creek under the bridge during storms. The iron pipe is constantly washing out during winter months as debris flowing down Bear creek

collects against the line and washes it out.

A new trunk sewer is not for the use of the east side only as there are a total of 3540 business houses and residences within the city. There are 1448 business houses and 1657 residences on the west side of Bear creek or a total of 3105.

On the east side there are 10 business houses and 727 residences or a total of 737. There are also 2523 vacant lots within the city, of which 1747 are on the west side of Bear creek and 776 on the east side.

**Storm Sewers**  
The question has been asked "Why not separate the sanitary sewer system in Medford from the storm sewer?" This is not at all impossible but to provide new storm sewers to carry the storm water from 1562 acres would cost the city about \$500,000. It is therefore unwise at the present time to make a separation.

However provision is made in the new trunk sewer to serve a population of 25,000 people. The additional capacity which will be available in this line can be used for storm water until such time as the city reaches the population of 25,000.

The city is liable for damages due to the known lack of repair of sewers or its failure to maintain them to a standard of efficiency. The city is liable for any damages which may result from the inadequate capacity of a sewer (N. W. Rep. 599, Wisconsin supreme court).

Washington supreme court case Boyer vs. City of Tacoma. City held liable for overflow of insufficient sewer. In this case, it appeared that the sewer was originally sufficient for the territory it served, but it became inadequate through growth of the territory. The overflow occurred in a period of heavy but not extraordinary rainfall.

## SHRINE CLUB MEETING DECLARED CANCELLED

The meeting of the Shrine club, scheduled for tomorrow noon at the Hotel Medford has been cancelled. It was announced this morning. The meeting will not be held because of the absence from the city of many members. D. G. Tyrre stated, in spite of the fact that notices of the meeting were mailed to club members a few days ago.

Mann's Store Open Tomorrow Night Until 8:30 o'Clock

# Annual July Clearance
