Needless Fear of Russia

"Some people claim the war created this depression. They are wrong. All our economic ills are due to a crowd of dirty, half-baked Russian fanatics who are ruining their own country and disrupting the entire economic world by broadcasting their poisonous propaganda and dumping their shoddy products on the markets. But for Soviet Russia, the depression would have long ago departed and this country and every other would be enjoying the prosperity of post-war days. Smash Soviet Russia and you smash the depression; not until Russia is checked, can the depression be."

THIS from an article in a contemporary magazine devoted to business and industrial problems. It only shows how crazy some people can go over the "Bolos."

Instead of regarding Russia's "ignoble experiment" as a menace and the cause of all our ills, we are inclined to regard it under present conditions, as well—almost a blessing in disguise.

FOR over a century the gospel of a better world has been preached, and for decades the doctrines of Karl Marx expounded. There is nothing new in the Russian idea.

But today with everyone discouraged and disheartened, there is no doubt that without Russia before us communism would have enjoyed a great revival. The plea of a better world would have appealed to all who don't like this one—who don't know precisely what they want, but who do want a change.

Without Russia there would have been no very tangible argument against this. But with Russia there is. For Russia today instead of being an argument in favor of communism, is the best possible argument against it.

To the glib and ready tongued red agitator today there is a very effective answer:

"You want this government overthrown, you want a long period of destruction and bloodshed, so that the dictatorship of the proletariat may bring in the millennium. Well, Russia tried your prescription and look at Russia today. If it won't work over there, it certainly won't work over here. And, regardless of everything else, there is no other there is a lower standard of living in Russia today than in any other so-called civilized country in the world, with the possible exception of China."

The proof of the pudding is in the eating. Without Russia it would have been easy for the radical orator to paint the beauties of communism just beyond the horizon, and persuade many of our discontented citizens to contribute some hard-earned money to the cause.

But while there IS widespread curiosity and interest in Russia today the more the individual learns about it,—as it actually is, not as some of its propagandists claim,—the less he likes it. It is a significant fact that among all the partisans and apologists for the Russian scheme, we have yet to find one of them that prefers Soviet Russia to his own country, as a place in which to live. This is in marked contrast to the situation following the establishment of this republic, when for half a century, individuals of all races and nations, flocked to our shores as the promised land—and FOUND it the promised land.

IN SHORT, the fact that the communistic theory is being actually applied in Russia today, instead of being a bad thing for this country, is a good thing. Without this practical demonstration of what communism really brings, this world-wide depression might well have resulted in serious disorders and even bloodshed within our borders; whereas, while this has been the worst depression in the country's history, it has been attended by the minimum of violence and among the rank and file, by the maximum of patience and self control.

Awfully Simple, and Simply Awful

UNCLE SAM never does things by halves. If he decides to be a bull he is the biggest bull in the world; if he decides to be a bear, no other bear in Christendom can touch him.

Just now bear psychology is all the rage,—as popular as bull psychology was two years ago. It is now as much THE THING to put your tail between your legs and squawk; as it was in September, 1929, to raise aforesaid tail to the top of the halyards and crow.

All of which emphasizes a frequent theme in this column that Americans insist upon going to extremes.

WE HAVE just noticed in the news dispatches that Postal Savings deposits recently reached a new high record. Reports also show that in practically every section of the country bank savings deposits are greater than ever before.

But to hear the prevailing chatter hereabouts and elsewhere one would conclude there wasn't a dollar in the world, and nine people out of ten were headed for the bread line.

Which is only another way of demonstrating that today we are overdoing the depression business, just as two years ago we were overdoing the boom times business.

WE ARE reliably informed President Hoover is offered an average of 20 schemes a day, each designed to be a sure fire cure for hard times.

But not one of them will work until the American people as a whole adopt a different attitude of mind; and everyone of them WILL work, the moment the people DO ADOPT A DIFFERENT ATTITUDE OF MIND.

There is plenty of money, literally billions, in the postal and savings banks. That money belongs to the people. The depression is over the moment the people treat that money as they treated it two or three years ago; and stop treating it as they have the past 18 months.

Simple, isn't it? Fundamental conditions do not need to be changed, merely the attitude toward them,—an attitude of panic and fear replaced by an attitude of reasonable courage and confidence.

A simple prescription, but one which, because of the present state of mind, it is all fired difficult to fill.

Iowa Vegetables
 Near \$3,000,000
 Mark in Returns

DES MOINES, Iowa. (AP)—They raise tall corn in Iowa, but that's not all. Vegetable growing has become almost a three-million dollar industry.

Figures from the latest federal census shows 48,912 acres in the state devoted to vegetables, with a crop valued at \$2,704,737.

Sweetcorn accounted for a third of this income, with dry onions, tomatos, cabbages, watermelons, cantaloupes, beans and asparagus accounting for the rest.

Multnomah — Messrs. Conrad and Bowman purchase lease on service station recently opened by Mr. Colton.

Sheridan — Mrs. Willis Wilson and Mrs. Elizabeth Retner purchased Hilda's place.

Salem — \$1,000,000 appropriation voted on for emergency roadwork during winter.

Chiloquin—Nelson's Meat Co. of San Jose, Cal. shipped five cars beef stock from here during recent days.

Miracle From the Deep. Gold and High Finance. Who Understands Either? Chance for the League

Copyright King Feature Synd. Inc.

A miracle from the deep comes to encourage those that love and respect courageous men. Two brave German fliers, Willy Rody and Christian Johannsen, and their Portuguese companion, Fernando Costa Viega, have been found after clinging to the floating wreck of their airplane for more than 150 hours.

Sad flying news relates the death of Peter J. Brady, president of the Federation Bank & Trust Company of New York, and head of Mayor Walker's committee on aviation. He believed that it was his duty to fly, and he flew constantly, although he was not a pilot. He was killed when a plane piloted by James Goodwin Hall, breaker of many records, crashed into a house on Staten Island.

The step taken by England "modifying the gold standard, which means ABANDONING THE GOLD PARITY OF ENGLISH BANKNOTES, temporarily; demonstrates Great Britain's determination to free herself from domination by the huge piles of gold upon which France and the United States at like old Patner in the Wagner opera.

The British empire, finding itself without an adequate gold supply, must arrange to transact business without such a supply, and does the only thing possible.

In suspending the gold standard, without abandoning it, Britain goes back to her condition of 1924, and previously, canceling the gold standard act of 1925 that required the Bank of England to set gold at fixed price, payable in pounds.

Under that act, if you had a 10-pound note the Bank of England was compelled to give you a certain amount of gold for it.

The British overestimated their financial strength, especially when they tried to put gigantic India on a gold basis, thus helping to destroy the value of silver and making worthless the money of over half the people on earth.

What the effect of Britain's action, or the action forced upon Great Britain will be, on this and other countries, you will learn from our voluble professional "great financiers."

And as they know as little about world finance and the gold fetish as a child unborn, you will not learn MUCH.

Experienced financiers who do not guess have no definite opinion as to the definite results of Britain's action.

It might increase the value of silver by convincing nations that it is dangerous to destroy one of two metals that have been used, side by side, as money for five thousand years.

Any British obligations specifically payable in gold or in dollars will be paid according to contract. There is no hint of repudiation of any obligation.

Mr. J. Pierpont Morgan, who talks briefly on all occasions and rarely for publication, made an exception yesterday, telling a reporter in London that he looks upon the British gold action as "a hopeful sign, and not a discouraging event."

He knows about British conditions and believes that the British government has taken the second of necessary steps, the first being to balance the budget, the second, this step in regard to gold. He predicts "the restoration of trade in England."

The New York Stock Exchange and Americans generally received the British news optimistically, putting up prices of important stocks. United States Steel went up more than four points, and stock exchange authorities, taking steps to discourage short selling, acted wisely and promptly.

The English pound sterling sold off as was expected. Britain had tried the impossible with her sudden restoration of the gold standard and an attempt to extend it to India. The British pound may sink to \$3, probably not lower. But the British will remember that the price at which other nations buy your money does not matter much. France stabilized her franc at 20 per cent of its original value, paying debts, including borrowings from England, with that kind of money. Since then the French have accumulated more than four thousand million dollars in gold, about one-third of the world's total supply.

During the war our dollars were selling at a discount of 80 per cent in Spain and below par in China. But that did not hurt us.

Prime Minister Bennett of Canada says his country will maintain the gold standard.

A "high French official" at Geneva says: "France and the United States together can and must support the pound sterling." Perhaps they should have supported it earlier.

More than four billions in gold piled up in France, more than five billions in the United States, make up more than 90 per cent of the world's total gold supply. Such accumulations compel other nations to get along without gold if they can.

But no one need fear that our five billion billions will diminish in value seriously. "Gold, gold, yellow and cold," is to firmly established for a successful attack.

Meanwhile, as Britain temporarily goes off the gold standard, the world's affairs go on as usual. You will read this morning what President Hoover had to say in his attempt to persuade the American Legion, that it should not at this time demand the right to borrow further from the government on bonus certificates.

The president's address to the American Legion was simple, brief and convincing.

"The making of it required courage, for it was a direct challenge to unpopularity."

You will be grieved perhaps, certainly not astonished, to learn that the London Daily Times blames the troubles of Britain largely on this country.

It seems that the United States and France "have not played the gold standard as it should have been played."

According to the London Times, the gold standard is excellent, while London has the gold, but not so good when the gold goes to New York and Paris.

The League of Nations has a chance to show the world what it amounts to with the Japanese accusing China of all wickedness, capturing and shooting up a Chinese city, and warning the inhabitants in Mukden that anyone hampering Japanese troop movements, and endangering Japanese lives, will be shot.

Japan lets it be known that no interference by the League of Nations is desired, and there will, probably, be none to amount to anything, although China is clamoring for proof that the league really exists.

SUNDOWN STORIES

The Bird's Freedom
 By Mary Graham Bonner

The Little Black Clock was waiting for John and Peggy at the foot of the garden path.

"What happened?" he asked.

"We told mother we wanted to run down to the house at the corner for just a few minutes because we had heard that the children had caught a bird and had put him in a cage," John began.

"She let us go right away," Peggy added.

"Then we saw the children and we saw the little bird they had caught," continued John. "The bird had been under a bush and some straw had held him there for a second and the children had caught him."

"I thought maybe they had put him on his tail," Peggy said.

"Oh, no," the Little Black Clock explained, "that is merely an old saying and really means that if a person gets near enough to touch a bird's tail they are about near enough to catch the bird. Tell me some more, John."

"They had put him in an empty cage they had and were planning to tame him. They didn't really mean to be cruel."

"I can understand that," the Little Black Clock said. "So often people do things that are unintentionally cruel."

"I told them how dreadful it was to capture and cage a bird that wanted to be free and to live on bushes and not in a cage," John continued.

"I told them it was different with birds who were born to cages and used to cages. And so, after a run-down they decided to let him go."

"Oh, wasn't it wonderful to see that bird when he knew at last that he was free again?"

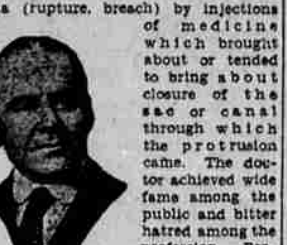

"Oh," said the Little Black Clock. "I'm so happy about this."

Personal Health Service

By William Brady, M. D.

Signed letters pertaining to personal health and hygiene, not to disease, diagnosis or treatment will be answered by Dr. Brady if a stamped self-addressed envelope is enclosed. Letters should be brief and written in ink. Owing to the large number of letters received only a few can be answered here. No reply can be made to queries not conforming to instructions. Address Dr. William Brady to care the Mail Tribune.

THE CURE OF HERNIA WITHOUT OPERATION

Back in 1848 an American doctor worked out a method of treating hernia (rupture, breach) by injections of medicine which brought about or tended to bring about closure of the sack or canal through which the protrusion came. The doctor achieved wide fame among the public and bitter hatred among the profession. Perhaps some operation worked out a method of treating hernia (rupture, breach) by injections of medicine which brought about or tended to bring about closure of the sack or canal through which the protrusion came. The doctor achieved wide fame among the public and bitter hatred among the profession. Perhaps some operation worked out a method of treating hernia (rupture, breach) by injections of medicine which brought about or tended to bring about closure of the sack or canal through which the protrusion came.
