### LOCAL INVENTION WILL AID MINERS SAVE FINE GOLD

An invention which promises to be very beneficial to the southern Oregon mining industry, has been perfected by Ed Trowbridge and C. C. Clark, and will be demonstrated Monday afternoon at the Garfield used car lot on North Riverside, at 2 o'clock.

It is an amalgamating pan which saves the fine gold, separates it from the pulp, discharges the pulp, and eliminates the concentrates, which are also saved.

The pan is operated by a small half-horsepower motor and will care for 25 tons of tailings a day. It makes 100 revolutions a minute; each shake making a breadth of 10 inches.

It works on the same principle devised by early miners in their panning of gold, the engine this time doing all the work.

The tailings are placed in the pan, which is 36 inches in diameter, from the outside. The light material goes out through the center opening and the quartz stays in the pan, always in the outer edge. The concentrates are poured out the faucets opened in the sides of the pan.

A special advantage of the pan is that it saves the fine gold, Mr. Clark, who has mined for 25 years, stated yesterday. The pan to be demonstrated is 86 inches in diameter, but one 56 inches in size, which will care for 50 tons of tailings a day, is also being made at the Trowbridge Iron works.

The machines will be sold by Mr. Clark, according to the plan, and if they meet with the popularity anticipated their manufacture will employ several men.
