LEAD POISONING IS PREVENTABLE

WASHINGTON, (AP)—Industrial workers can be protected from lead poisoning if strict precautions are enforced, says a report to the American Public Health Association by Dr. George Gehrmann.

It has been found possible to protect workers, he states, even in the manufacture of tetra-ethyl-lead, one of the most dangerous industrial processes involving lead because workers can be poisoned by it through mouth, nose and skin.

Precautions against poisoning, he explains, include change of clothes and bathing after work, periodic health examinations and maintenance of good health by workers, elimination of dust and fumes from work rooms.

Women and young people under 21 were found "decidedly" susceptible to lead poisoning and should not be employed on processes where there is danger of lead poisoning, Dr. Gehrmann said. The same applies to men over 45.

'ZEBRASTONE' NEW WISCONSIN FIND

ALMA CENTER, Wis.—(AP)—Discovery of a peculiar and attractive rock formation in a quarry near here has created a new industry here.

"Zebrastones," as they have been named, because of their unusual striped markings, are to be quarried and marketed by a newly-formed company of Madison, Wis., men.

Colors appearing most often are white, black, light and dark brown. Geologists say the coloring was caused by a solution of iron having been deposited in white sand. Demand for the stones has come largely from builders of rock gardens. Stones that a man can lift have been selling for from 25 cents to a dollar.
