D. A. R. News

Members of Crater Lake Chapter, Daughters of the American Revolution, are anticipating a real pleasure when the program for the January meeting will be in charge of the General Joseph Lane Society, Children of the American Revolution. The meeting will be held in the women's club rooms in the city hall, on North Central avenue, on Saturday, January 21, at 2:00 o'clock. Hostesses will include Mesdames Cochran, D'Albini, Woods, Beeson, Harris and McDonald.

The field of work covered by the D. A. R. genealogical records committee is a constantly broadening one and the value of the research work is more fully realized each year.

Unpublished records, copied from old letters, diaries and family Bibles as well as records from churches, cemeteries, court houses, etc., are made into special books and placed on the shelves of the D. A. R. library and preserved for future generations.

These records are available to those desiring membership in the society and often prove an invaluable aid in establishing a lineage record.

The preservation of valuable records is an obligation each generation owes to future generations.

Mrs. B. G. Harding is state chairman of the genealogical records committee and a member of the national committee and Miss Jane Snedcor is chairman for Crater Lake Chapter.

WALTER W. ABBEY ANNOUNCES 1933 MODELS OF NASH

KENOSHA, Wis., Jan. 7.—(Sp.)—Nash Motors today officially presented at the New York automobile show five new series of 1933 automobiles, which unmistakably emphasize quality and minimize price for the American motorist, according to Walter Abbey, head of Walter W. Abbey, Inc., Nash dealers with headquarters in this city.

Three straight-eight groups—Ambassador, Advanced and Special—a popular priced new standard eight, and a flashing new big six series, constitute the great new line in which Nash engineering has resolutely avoided the cheapened construction suggested by the highly competitive times; has sought and found the best, regardless of price, and has achieved the most remarkable quality success in company history by utilizing the full organization's irreplaceable financial position and its traditional efficiency in volume production.

In the new ambassador twin-ignition eight series, with its 125 horsepower engine, and the wheelbases of 142 and 138 inches; the twin-ignition advanced eight with its 100 horsepower and 128-inch wheelbase, and the special straight-eight with 85 horsepower and 121-inch wheelbase, Nash engineering has created unparalleled conceptions of automobile excellence. Sharing, as they do, the unique manufacturing economies of Nash, and distinguished from one another by size and power, rather than by any quality deviation, they offer all of the luxury, refinement and precision of performance that engineering skill can bring to cars of many times their cost.

The new standard eight, at its astonishingly low price, makes it even more apparent that the advanced engineering and manufacturing methods developed by Nash produce quality motoring at minimum cost. It has the characteristic long Nash wheelbase which does so much for riding ease and comfort. It is a big, powerful eight with a high ratio of power-to-weight which reveals itself in brilliant speed and acceleration. Included in the long list of engineering refinements which contribute to its thrilling performance are: 9-bearing motor with pneumatic cushion rubber engine mountings; improved Nash X-dual frame, super-rigid and super-durable; synchro-shaft, silent-rod transmission and synchro-shaft; free wheeling; high-efficiency, cable-controlled brakes, with steel and cast iron, long-life brake drums. New, double-action shock absorbers, a feature of both the standard eight and big six, are thermally adjusted and automatically adjusted for maximum riding comfort in all weather conditions, on any road and with any load.

The standard eight is further equipped with new, threaded type, self-adjusting spring shackles, non-shattering windshield glass, and an effective new windshield control lever which locks the shield in place in either open or closed position and is easily operated from the driver's seat; new instruments and instrument panel, metal spring covers, five demountable artillery or wire wheels, and many other ultra-modern conveniences.
