

NEW RESERVOIR SERIOUS NEED, CLUB IS TOLD

Present Low Storage Presents Grave Risk, Duff Tells Kiwanians — Issue of Bonds Now Is Favored

Kiwanians today were pondering startling facts presented to the Kiwanis club at its weekly luncheon meeting at the Hotel Medford yesterday by Robert A. Duff, superintendent of the Medford board of water commissioners.

After hearing Mr. Duff, members of the club held a round table discussion and it was their consensus that as individuals they should support the bond issue to be voted upon by the electorate October 26, to finance a new water reservoir toward the construction of which the federal government has made an outright grant of \$65,250.

Duff emphasized that the new reservoir would have to be built eventually and that the present was considered the most opportune time because of the federal grant. If it is not built now, he pointed out, the city would have to bear the entire expense later.

"The board of water commissioners finds that the new reservoir is a pressing necessity," Mr. Duff told the club, "and members of the board feel that they would be derelict in their duties if they did not put the project before the voters now. I believe it is our solemn duty to place this responsibility before the people."

Pointing out that the present two reservoirs have a combined capacity of only 4,000,000 gallons, Mr. Duff stated that a break in the pipe-line might at any time deprive the city of water for a day or more. Not only would this be a serious inconvenience but a threatening fire hazard, he stressed.

In the summer months a huge volume of water is consumed in the city daily, he informed the Kiwanians. Statistics show, Mr. Duff related, that this year the peak load was recorded on August 12 when for a few minutes consumption of water was at the rate of 12,550,000 gallons per day, while on that same day the

actual total consumption was 8,850,000 gallons, or more than twice the capacity of the present reservoirs. The proposed reservoir, he explained, would have a capacity of 10,000,000 gallons, bringing the total storage to 14,000,000, a reserve supply that is necessary for safety.

Mr. Duff explained that at several points the pipe-line is liable to be broken by a washout in the irrigation canal that parallels the pipe route from above.

He recalled the one day in 1931 a break occurred in the pipe-line that required several hours to repair, and when the repairs were completed the water in the reservoir was down to an extremely low level. Just a few hours after the break was repaired and the reservoir had been filled, the serious fire at the Pine box factory occurred, he reminded the club. If the fire had occurred a few hours earlier, he stated, the fire-fighters would have been confronted by a serious handicap and the fire might have developed into a disastrous conflagration.

Construction of the proposed reservoir involves no increase in either taxes or water rates, Mr. Duff stressed. "It is better to build now when we have an outright federal grant of \$65,250 than to continue present risks for a couple of years more when we shall have to build the reservoir anyhow and without any outside financial aid," Mr. Duff concluded.

The club held a drawing for five prizes, without knowing in advance what the awards were to be. When the winners were announced it was revealed that the prizes were messes of trout, presented by Everett Trowbridge. Winners were Judge H. D. Norton, Ted GeBauer, Carl Y. Tengwald, Sebastian Apollo and J. C. Thompson.

SEPTEMBER WAS WARMEST SINCE RECORD STARTED

Monthly meteorological notes compiled by W. J. Hutchison, local meteorologist, show the warmest September for Medford and vicinity since records were started in 1911. Daily mean temperatures were almost all above normal, those on the 14th and 15th being the exceptions. Rainfall totaled exactly one-half of the monthly normal amount.

The forepart of the month was exceptionally warm with maximum temperatures averaging above 95 degrees for the first 10 days. Moderate and more seasonable temperatures followed this warmer period and prevailed until the 25th. A short period of high day temperatures again occurred from the 26th to 28th, followed by slight moderation on the two closing days.

Mean daily temperatures averaged 85.8 degrees and established a new high mean for September. The average of daily maximum temperatures, 88.8 degrees, also exceeded all previous September records. The mean minimum of 48.7 degrees was next to the highest for that figure, a mean of 50.7 degrees having occurred for September, 1918. An extreme high temperature for the month registered 102 degrees on the 3rd. The all time record high temperature for September is 104 degrees. A minimum of 41 degrees on the morning of the 29th was the monthly lowest.

Precipitation, although totaling 0.26 inches, was of little value to agriculture owing to the entire fall being confined to a single day, the 14th; a refreshing rain accompanied by cooler weather for a few days following but commercially of little benefit. Normal rainfall for September is 0.52 inches showing a deficiency of 0.26 inches for the month and beginning a new rainfall season with a like shortage.

Prevailing winds were from the northwest and a total wind movement of 3775 miles passed over the station at an average velocity of 5.2 miles per hour. A southeast wind of 30 miles per hour on the 14th was the highest velocity for the month.

ASHLAND C. OF C. BACKS BUILDING DISPOSAL PLANT

ASHLAND, Oct. 8.—(Sp.)—Unanimous support of the city council's plan to construct a sewage disposal plant in Ashland was given by the chamber of commerce board of directors meeting Monday noon when they went on record favoring passage of the resolution at the general election to be held on October 18.

The situation, including need for the plant and advantage to be gained by immediate construction, was outlined to the board by Frank Van Dyke, attorney and a member of the board.

Van Dyke said the bonds will be of self-liquidating nature and will not add a cent to the taxpayers' burden. The charge per household will be less than 20 cents each per month and these rates will be worked out in accordance with the number of sewer connections at any given residence or business establishment.

The necessity for a new plant arises from the present condition of the septic tanks, said Van Dyke, who added that several cases of disease have been discovered recently that were definitely attributed to the use of Bear creek water, which will be purified when the new plant is built.

The plant will have to be built some time, he said, and it would be better and more economical for the

city to go ahead with plans now while the federal government is willing to furnish 45 per cent of the necessary funds, not to exceed 45 per cent of the \$80,000.

Frank Jordan was elected by the directors to fill a vacancy created by the departure of Dr. B. G. Barkwill, former president.

A number of county offices and departments have requested increases in pay for workers in budgets submitted to the budget committee which are now under consideration. No action has been taken upon the

requests. Members of the county court have stated that if any pay boosts were granted "they would be upon a uniform basis throughout."

The increased cost of living and rising prices are given as reasons for the requests.

Next regular meeting of the budget committee is scheduled for Thursday. In the previous sessions county office budgets have been under consideration. They follow closely the amounts asked the past three years. All the county offices are within the amount appropriated.

Members of the county court state that "the county is forced to do something about county bridges," that are approaching the danger stage, and need new timbers, flooring and steel work.
