

SURGERY MIRACLE BRINGS CURE OF BRAIN DISEASES

Portions Of Skull May Be Removed, Cured Of Ills And Replaced Hours Or Weeks Later Is Word.

By Howard Blakeslee (Associated Press Science Editor) SAN FRANCISCO, Oct. 29.—(AP)—A miracle of brain surgery, by which portions of the skull are removed, cured of their ills outside, and restored safely to the head hours or even weeks later, was described to the American College of Surgeons here today.

The technique is a step in the direction of taking out diseased parts and putting them back after they are cured. The brain surgery has been under development for several years at the University of California medical school, and was explained by Howard C. Naffziger, M. D., head of the department of surgery at the university, and O. W. Jones, Jr., M. D.

Two brain troubles are cured in this manner. One is tumors of the skull, both cancerous and benign. The other is infectious of the skull. In tumors the affected part of the bone is removed, the entire growth going with it. The tumorous tissues are then removed from the bone. Then the bone is sterilized and is ready for immediate replanting in its place in the head.

It was not known until a few years ago, Dr. Naffziger said, that cancerous bone so treated could be replanted with safety. But the sterilization, done by boiling in water, completely removed the danger of the cancer recurring.

Formerly bone grafts were used for restoring the wounds left by such operations. The grafts were sometimes troublesome or dangerous, Dr. Naffziger said.

"The skull," he said, "is the one place where you can remove the tissue that harbors the tumor, sterilize the bone and replant it at once."

The infections of the skull are handled differently. The infested bone is removed, sterilized, and put away for periods of some weeks into weeks, while the infection in the brain covering about the site of the removed piece gets well. Then the piece of skull is put back in place.

THANKSGIVING BIRDS WILL COST MORE IN WESTERN TERRITORY (Continued From Page One.)

The bulletin points out this was an increase of 45 per cent for the coast and 113 for the mountain districts, and continues: "But we find by vital statistics that there was a much greater mortality this year, due to weather conditions and disease among young stock, and after making allowance for this, it is estimated that the number of turkeys actually raised is somewhat less than in 1934."
