

OREGON RECEIPTS FROM WPA VAULTS NOW \$36,475,555

State Allocations From Two Emergency Relief Acts Total \$49,909,000 With \$9,849,490 Yet To Spend.

WASHINGTON, Sept. 11.—(AP)—The works program administration said in a report today expenditures in Oregon under the 1935 and 1936 emergency relief acts reached a total of \$36,475,555 on July 31, 1936.

The 1935 act made available \$4,580,000,000 and the 1936 act \$1,425,000,000 for the nation-wide relief program.

Presidential allocations to Oregon under both acts totaled \$49,909,567. Obligations incurred amounted to \$46,325,045 which, less actual expenditures, left \$9,849,490 in obligated funds slated for expenditure in Oregon after July 31.

Of these funds the WPA spent \$10,207,133. Allocations to strictly WPA projects amounted to \$12,735,216 and obligations incurred, \$11,189,874.

The remaining funds were allotted to, obligated or spent by other federal agencies.

Allocations to the Oregon WPA under the 1936 act amounted to \$2,359,375.

Federal relief payrolls, exclusive of administrative employees, showed persons employed during the week ended July 25 totaled 24,922 in Oregon, of which 12,988 were employed on WPA projects, 3,838 on emergency conservation work, and 8,156 by other federal agencies.

The total for the week ended July 11 was 25,782, and for the week ended June 27 it was 27,997.

Of the 8,156 employed the week of July 25 by other agencies, 4,472 were working for the agriculture department as follows: entomology and plant quarantine, 254; forest service, 85; public roads, 3,973; soil conservation, 73.

The next biggest employer among agencies other than the WPA was the public works administration with a payroll of 2,240, all working on non-federal projects.

KING EDWARD GARDEN IS BESET BY RABBITS

LONDON (UP)—One of the worst sufferers from rabbit invasions is King Edward at his Windsor forest residence, Fort Belvedere, where he has become a keen gardener and planned many of the beds himself, often helping in the work with his own hands.

His gardens are among the loveliest in the country, but rabbits from the surrounding forest and park have wrought havoc, notwithstanding the efforts of the local keepers, who annually slay thousands.

Performing Horse Succumbs At Fair

SALEM, Sept. 11.—(AP) Herky, registered Arabian horse, part of the Kellogg Farm, Pomona, Calif., liberty drill horse show at the Oregon state fair, died early today.

The animal, declared valued at \$1,500, contracted shipping fever en route to Salem.

The management announced the drill would be continued without him by the other seven mates.

California Hears Of Superb Pears Procurable Here

News of the superiority of Rogue valley pears has finally penetrated into California, one of the biggest if not one of the best pear-producing states in the union. As a result, four boxes of Medford Bartlett's left here yesterday by plane for consumption at a San Rafael army post.

Lieut. B. E. Brugge came up from Hamilton field in a Martin bomber to get the pears. They were waiting for him at the airport. Tom A. Culbertson, field manager, having ordered them for him. Spot cash was paid on delivery.

"If they live up to their reputation," said Lieut. Brugge, "we'll be back for a dozen cases of your famous Bartlett's."

Foots Creek

FOOTS CREEK, Sept. 11.—(Sp.)—A large crowd attended the opening of the new casino Saturday evening. This was formerly the Community club. Mr. Ernst has added a new dance pavilion and other extensive improvements making this a very attractive resort.

Mr. and Mrs. R. L. Miller and daughter Phyllis accompanied Mrs. Nellie Walker and daughter Sybil of Gold Hill and Rollin Stiehl of Rogue River to Diamond lake and the Boundary springs, the head of Rogue river, Sunday.

Mr. and Mrs. Stanley Pratt of Medford were week-end guests of Mr. and Mrs. Norman Baxter.

Otto Fuhrman returned home last week from a month's visit with relatives in New York and other eastern states.

Mrs. Ella Lance was agreeably surprised Tuesday evening when a group of friends came with a chicken dinner in honor of her birthday.

Mr. and Mrs. L. Lingreen and daughter of Gold Hill visited Mr. and Mrs. George Koster, Aug. 31.

Mr. and Mrs. Roy Seaman and son of Medford visited Aug. 30 with Mrs. George Staud.

Mr. and Mrs. Floyd Lance and daughter Ruth of Wolf Creek spent the week end with relatives here, Sunday they and Mr. and Mrs. R. E. Cook of Gold Hill and George Lance were dinner guests of Mr. and Mrs. Leslie Cook. Ruth Lance will stay with her grandparents Mr. and Mrs. R. E. Cook, and attend the Gold Hill high school, which opened Tuesday.

Mr. and Mrs. Wetteloid of Seattle, Wash., and Mr. and Mrs. Tony Ross and son Pat of Gold Hill, spent Sept. 13 at Mr. Wetteloid's mine above the Anderson ranch.

Mr. and Mrs. John Cook of Gold Hill spent Aug. 30 with their son and wife, Mr. and Mrs. Leslie Cook.

George Lance spent September 1 and 2 with his son, Floyd Lance, and family at Wolf Creek.

Mr. and Mrs. Marion Lance were Rogue River visitors Sunday.

NEW YORK CITY TAKES TO INTENSIVE FARMING

NEW YORK (UP)—Everything from artichokes to zucchini is being grown in New York City under the WPA subsistence garden project.

Thousands of small home owners have been initiated into the secrets of small-scale, intensive farming. The average lot used for gardening is no larger than 50 by 50 feet, but they are scattered over Bronx, Queens, Kings and Richmond counties.

Enough produce was grown in the city's four boroughs last year to feed 30,000 persons. That amount will be substantially increased this year.

LENS INVENTED TO PHOTOGRAPH FLOATING DUST

Inventor Says New Camera Can Check Air To Avert Silicosis Fatalities In Industrial Plants, Mines.

NEW HAVEN, Conn.—(UP)—A "dust camera" which will actually "shoot" dust in the air and provide the only permanent record of dust which can be obtained today by actinometer making studies in the dust content of air in various industries, has been invented by Lawrence H. Ott of Cleveland, a student in the Sloane physics laboratory at Yale university.

Ott worked two years with J. B. Pickett, chemical engineer for the Travelers Insurance company, in developing the apparatus which, it was said, would have prevented the recent silicosis tragedy in West Virginia, where several people died as the result of an over-abundance of silica dust in the air.

The camera is extremely useful, Ott says, in industries using brick-making, quarrying and burning in their manufacturing processes. "As soon as employees are required to keep the dust volume in the air down by legal statutes, such a method of counting dust as we have devised

will be even more interesting and valuable," he asserts.

Particles Counted. The camera takes a picture of the particles of dust in a very small amount of air. These particles are counted and the percentage of dust in cubic feet of air estimated, similar to the method now employed by physicians and physiologists to determine the number of blood cells in the human body.

The simple and light apparatus was fashioned and assembled by Ott in the machine shop of the Sloane physics laboratory. It consists of an upright shaft with a camera box on top and the lens within the tube to which are attached three cylindrical pipes. Each of these three pipes contains a flashlight bulb, such as is now used in commercial photography, wired for lighting.

Air Sample Taken. A rubber tube is attached to the upright metal chamber, and air is sucked into the interior through a rubber nozzle. When this sample of air, which contains the dust to be photographed, has been drawn into the testing chamber, it is left undisturbed for a period of from 30 to 60 seconds. The shutter of the camera then is opened and the photo-flashlight is fired by a pocket battery—three bulbs being touched off simultaneously.

The present equipment weighs eight pounds, but Ott is working to develop a dust camera with one bulb to weigh only five pounds. The department of the interior recently communicated with the Yale physicists for complete information about the new camera process.

The camera provides the only means known at present of preserving a permanent record of the amount of dust in a given locality at any particular moment.
