LINDBERGH SEES ROCKET AS MEANS OF FAST TRAVEL

WORCESTER, Mass., June 5.—(P)—Colonel Charles A. Lindbergh predicted today that commerce "must look to the rocket if we hope to attain speeds of transport above a few hundreds miles an hour."

In a letter to President Wallace Atwood of Clark university, read today at Clark's commencement exercises, the aviator-scientist said rocket experiments by Professor H. Goddard of Clark might lead "a rocket enthusiast" to predict "in an unguarded moment" that we will eventually travel at speeds governed only by the acceleration which the human body can stand.

Lindbergh's letter, written in England a month ago, pointed out that "from the standpoint of science the rocket offers the only known possibility of sending instruments to altitudes above those reached by sounding balloons. Observations taken outside of the earth's atmosphere, or even in the higher levels of the atmosphere, would be of immense value in the study of such subjects as astronomy, meteorology and terrestrial magnetism."

He also pointed out that "from the standpoint of war we must consider the fact that rockets may carry explosives faster than the airplane and farther than the projectile."
"The importance of the rocket lies in the effect it may have on science, on commerce and on war. An attempt to estimate its future in these various fields might well be likened to an attempt to prophesy the future of the airplane at the time of Langley. The problems are somewhat similar and the possibilities as great."

DOES ELECTRIC COOKING COST TOO MUCH?

YOU ARE PAYING FOR ELECTRIC COOKING WHETHER YOU USE IT OR NOT... WHY CONTINUE TO "GET ALONG" WITH AN OLD FASHIONED, INCONVENIENT FUEL STOVE?

YOU PAY

- from \$2 to \$4 for wood for cooking.
- the highest rate for lights and small appliances.
- you carry wood and ashes, scrub and clean... and roast over the cook stove all summer.
- you boil away food values that can be saved if cooked electrically.

IF YOU USE AN ELECTRIC RANGE

- you receive electric service on the combination electric rate which averages much less than 1/2 the lighting rate per kwh.
- electric cooking costs the average family of four less than 10 cents a day. (Wood alone costs nearly as much.)
- no wood to split or carry in.
- no ashes to dispose of.
- no soot to scour from stove, walls or pots and pans.
- save as much as 1/2 the precious health giving vitamins and minerals in food boiled away by old-fashioned cooking methods.
