

SUMMERIZING PLAN FOR MOTORISTS

TEXAS SLAYER OF PARENTS ESCAPES

AUSTIN, Tex., April 16.—(AP)—Dr. O. H. Handfield, superintendent, said today Howard Pierson, 23, slayer of his parents, Supreme Court Judge and Mrs. William Pierson, in 1935, escaped from the state insane hospital here today.

His pajamas were found in a hedge-row on the hospital grounds and, although most of his clothes were found in his room, officials believed Pierson possibly had hidden out others which he donned before leaving the grounds. On April 24, 1935, he shot his parents after luring them to a lonely spot ten miles from Austin on the pretext of showing them an Indian relic. Pierson shot himself in the arm after slaying his parents to bolster his original story that the family was attacked by robbers.

Many Inspections Offered By Local Mobilgas Men To Assist Summer Motorists

"After its gruelling work during the winter months, is your car ready for the punishment of summer?" With this question uppermost in the minds of Mobilgas and Mobiloil dealers, they have again joined in a great summerizing plan, including many free car inspections to assist motorists in preventing the troubles that might be experienced for lack of proper checkup.

Ted Snyder

"For the benefit of motorists in this area," says Mr. Ted Snyder, manager for General Petroleum Corporation, "our station operations and dealers who maintain Mobil-lubrication departments are offering twelve free inspections of vital automobile parts. "These inspections are for the purpose of keeping automobiles healthy and insuring their peak performance, without mishaps, during the warm weather season ahead."

To Avoid Car Trouble Judging from the heavy response to the summerizing plan as announced here last year and expressions of satisfaction from many local motorists, the Mobilgas executive predicts that summerizing in 1938 will be a more pronounced success than ever. "It is highly important," he declares, "that cars be inspected regularly to make them road worthy and to prevent burning out bearings, sticking of valves, scoring of cylinder walls, failure of spark plugs, blowouts of tires, overheating of the motor, failure of battery, failure of lights, undue carbon deposit and the use of too much oil and gasoline. "Winter does things to cars, so we consider these inspections essential."

SUMMERIZING OF TIRES ESSENTIAL SAYS U. S. CHIEF

Westerners have more reason to have their tires "summerized" than motorists in any other section of the country, according to R. C. Tucker, Pacific Coast sales manager for U. S. Tire Dealers Mutual Corp. "We Pacific coast motorists have a reputation for going places and seeing things," Mr. Tucker explained. "This is only natural, for we have the finest roads in the world to go on; unsurpassed scenery to see; and more automobiles per family to go in than any other section of the union. "Of course, an important part of "summerizing" is to be sure that your car is equipped with tires ready to provide the extra stopping power and skid control required in heavy traffic, and the extra wear needed for long trips. Car owners can now provide both: the extra stopping power and extra wear so necessary for motoring peace of mind simply by equipping their cars with a new kind of safety tire recently introduced by United States Rubber Products, Inc. "This tire, the U. S. Royal Master, has proved, by extensive road tests, that it will stop a car from 4 to 223 feet quicker. Charts listing the results of these tests have been prepared and show that the patented Centipede Grip tread on this tire will stop cars traveling forty-five miles an hour many feet quicker than other new tires. For example, four feet quicker on dry roads; 46 feet quicker on wet asphalt; 111 feet quicker on wet crown roads; and 223 feet quicker on hard pavement covered with wet clay. "Not only does Royal Master provide this extra stopping power and skid control while the tire is new, but, because of its lifetime de-skidded tread, these safety features are maintained for the entire life of the tire. Car owners can now have their Royal Master tires re-de-skidded and re-grooved as required."

MILK PRODUCERS WANT CUD MONEY

ASTORIA, April 16.—(AP)—Mandatory cash payment for all milk and cream delivered was urged upon the Oregon milk control board yesterday by local producers and distributors. At a hearing on possible price revisions, the board heard testimony concerning sustained high cost of production and distribution of fluid milk and cream and decreasing butterfat consumer purchasing power.

So Help Me, It's True!

By E. F. (Woodie) Woodman

BURNS AT STAKE 167 HOURS AND LIVES
Literally burned at the stake 167 hours! That's the torturing life of a spark plug in a motor going 5,000 miles. During this period the plugs of a 6-cylinder car set off 45 million cyclones of five 3,500 degrees HOT. "No wonder they should be inspected during Summerizing," say Mobilgas dealers.

ABRASIVE FOR FIVE STACKS OF MATCH PACKETS, EACH 48 FEET HIGH
Grit enough to make 11,500 match packets (five stacks, each 48 feet high) is collected in motor oil during 5,000 miles of use. The abrasive comes from 60,000 cubic feet of air drawn through the crankcase. That's why motorists are advised by automotive and lubrication engineers to drain the oil every 1000 miles, and flush the crankcase regularly.

LIKE A 100,000 LB. BLOW
Giant pressure of 100,000 pounds is exerted against wheel bearing races when your car makes a right angle turn. The same great force hits rear end gears when you rapidly accelerate in "second." "This proves," say technicians, "that such vital parts must be well cushioned with correct lubricants, and these lubricants should be flushed out and replaced at regular intervals, such as during Summerizing and Winterproofing."

MAGNET PULLS METAL FROM USED OIL
Steel, iron, brass, babbit and grit particles in considerable volume are often found in transmission and differential oil after the terrific churning that occurs in three or four months' travel. They sometimes plug oil holes, prevent lubrication, and cause expensive repairs. You can actually pull some of this metal out with a magnet. Motorists are being warned to have gear cases flushed between seasons.

YOUR AUTO MAY MAKE TAFFY
A tough, sticky, gummy substance like road tar—called TAFFY by Mobil-lubrication experts—may be created in a hypoid gear differential. It often happens when two kinds of lubricant are mixed therein. They may be perfect lubricants, but when mixed, their different characteristics set up a dangerous chemical reaction. This may cause burned out bearings and stripped gears.

GRANT BEAN NEW WHOLESALE HEAD IN VALLEY AREA

Grant Bean, well known business man of Walla Walla, Washington, has been appointed by the General Petroleum Corporation as wholesale agent for that company's products in the Medford area. Mr. Bean has already arrived in this city and has assumed charge of the distribution machinery for the General Petroleum Corporation here. "I am indeed gratified in securing the wholesale agency for General Petroleum Corporation in this territory," Grant Bean said Saturday in commenting upon the announcement of his appointment to the Medford station. "A year ago I visited this city on a vacation trip and was so impressed with the beauty of the Rogue River valley and Medford as a growing trade center, I immediately centered my efforts on securing the General Petroleum distribution set-

Grant Bean

up here. My recent appointment as wholesale agent is the culmination of these efforts. I am delighted with the fine array of energetic independent General Petroleum dealers in the Medford district as well as the splendid company-owned stations in my new territory.

Simultaneous with the appointment of Grant Bean as wholesale agent here, the General Petroleum Corporation announced a sweeping expansion program here which will include the immediate construction of two large super-service stations in Medford, one at Fourth and Riverside and the other at Ninth and Riverside. Finishing touches are now being put on a modern, new station at the junction of the Pacific highway and the main street of Central Point, operated under the capable supervision of Verne Pendleton and Don Patterson. Ted Snyder, representative for the General Petroleum Corporation with headquarters in Medford, expressed satisfaction in the selection of Mr. Bean as wholesale agent here. Snyder has been manager here for the past year and will remain in charge of the company's operations in the entire southern Oregon territory, including Klamath Falls.

Medical graduates in the United States in 1936-37 numbered 5,377, of whom 238 were women. Use Mail Tribune Want Ads.

YOU CAN STOP 4 to 223 FEET QUICKER

PROVE IT YOURSELF IN ONE MINUTE

STOPS QUICKER
When brakes are applied, the "de-skidded" tread cuts into the pavement... hundreds of sharp gripping edges bite through the slippery surface film... enable the flexible tread units to solidly grip the pavement.

CONTROLS SIDE SKIDS
When the night of the car suddenly shifts to the side, in turning corners, passing cars, etc., the lateral edges of the seven continuous ribs go into action, instantly bite through the film and gain a direct positive foothold on the road.

OILED GRAVEL ROAD No. 11 DRY	OILED GRAVEL ROAD No. 11 WET	ASPHALT COMPOSITION ROAD No. 6 WET
4 FEET QUICKER	73 FEET QUICKER	46 FEET QUICKER
SLUSH ON ROAD PAYMENT No. 31	SMOOTH HIGH CROWN ROAD No. 24 WET	WET CLAY ON ROAD PAYMENT No. 15
75 FEET QUICKER	111 FEET QUICKER	223 FEET QUICKER

See for yourself how these great De-Skidded tires stop a car quicker on curves or straight-aways... uphill or down... on wet or dry pavement. Drop in! Try our amazing one-minute test. Learn about this new Skid Control.

Rust Deposits Destroy Efficiency Of Automobiles

Warped and sticking valves, wear of piston rings, waste of oil and power and many other troubles have been avoided for the automobile owner by the design of efficient cooling systems, such as installed in today's cars, says W. Boice, manager for the Mobilgas marketing organization. "However," he declares, "one of the reasons for announcing the Summerizing inspection plan is to call attention to the necessity for frequent flushing of the cooling system to prevent overheating and attendant difficulties. "Rust in the radiator and along the walls of water jacket is one of the worst enemies of a motor. Science proves that a deposit of rust only one-eighth inch in thickness has the same resistance to heat and cold as a sheet of asbestos of about the same thickness. "This gives some conception of the

importance of flushing cooling systems with a product created by Mobilgas chemists for this specific purpose, and following this with the use of a water neutralizer to prevent further formation of this decomposed iron. "Too high a temperature wastes fuel and causes oil to burn. Hence, all Mobil dealers urge the frequent inspection of the cooling system."

CENTRAL POINT OREGON

FARM INCOME TO SHOW CUT, CLAIM

WASHINGTON, April 16.—(AP)—The bureau of agriculture economics predicted today that the national cash farm income during the first half of 1938 would be about \$3,000,000,000 or about \$503,000,000 less than during the same period last year. The prediction was based on a con-

tinued weakness in the domestic demand and lower prices for farm products and "increased evidence of recession in business activity in foreign countries which are markets for the American farm products."

CARD OF THANKS

We wish to express our sincere appreciation and thanks to our friends and neighbors for their kindness and sympathy, also for the beautiful floral offerings in our recent bereavement.
