TO DISCOVER a new kind of mastodon with a plow—it must be some sort of record. Exactly that was done by Standard Oil employees at Kettleman Hills.

* * *

No matter how many oceans of lubricants this Company produces, when it drills an oil well by the rotary process it has to go back to the first lubricant of all—mud.

* * *

These men were plowing up clay for mud when they struck a 700-pound fossil skull of a hairy tusker—not quite elephant or mammoth—who shared Pliocene California with the three-toed horse and sabre-tooth tiger and was already a pioneer distrustful of the younger generation, when the ordinary mastodon arrived.

* * *

University of California scientists termed it a new subspecies and named it *mastodon vexillarius*—that is to say, *standard*-bearer.

* * *

The oil industry is always close to man's eternal yesterdays. Its drill sinks through the ages, the eons, to the time when darkness was upon the face of the deep. Compared to the organisms from which Nature made oil—compared to petroleum itself—compared, you might even say, to the gasoline in your car, our mastodon was just a youngster, some 990 million years their junior.
