

ARGUMENT HEARD IN FRUIT FIRMS' JOB TAX PROTEST

Arguments on a demurrer in the suit of the Pinnacle Packing company, and ten other Rogue River valley and Hood River packing plants against the Oregon state unemployment compensation act were heard today before Circuit Judge H. D. Norton. No decision is anticipated until the court takes the matter under advisement.

The packers claim they are exempt from payment of "contributions" to the jobless insurance fund on the ground they are engaged in agricultural pursuits. They further hold that as they are exempt under the Federal Social Security act, they should be under the Oregon law.

The court, at the institution of the suit, granted the packers an injunction restraining the state from collection of the first quarter 1940 dues, due April 30 last, during the pendency of the suit.

The state is represented by Assistant Attorney General Harold Campbell of Salem and the packers by Attorneys George M. Roberts and William M. McAllister of this city.

Motherhood Made Easier by Small Quantities of Iodine

By Howard W. Blakeslee, Associated Press Science Editor. Seattle, June 19.—A discovery that iodine makes human motherhood easier was reported to the American Association for the Advancement of Science here today.

Small quantities of iodine were given to expectant mothers at the University of Oregon medical school. Some remarkable results were reported by Doctors F. B. Zener, Milkanth M. Pinatak and N. A. David.

The women reported a greater sense of well-being before the babies were born. There were fewer abnormalities of labor during birth.

Afterward they were better

able to nurse the babies. Finally, they recovered more quickly. These mothers were compared with "controls," who were other mothers receiving medical care, but without the iodine. The comparison indicated the probable reason for the iodine effects.

The thyroid and some other glands of internal secretion functioned better. The thyroid, which normally requires a little iodine, regulates metabolism.

The Oregon studies showed that the basal metabolism rates of the mothers receiving iodine remained more nearly normal, while those without the added iodine had increased basal rates.
