

PAUL A. SCHERER MADE CHIEF OF RESEARCH UNIT

Former Medfordite Assigned One of Nation's Most Im- portant Scientific Jobs.

Effective November 1st, Paul A. Scherer, widely known research engineer, will take over one of the country's most important wartime scientific jobs, that of chief of the engineering and transition office of the National Defense Research Committee. The appointment was disclosed by J. C. Garrett, president of AResearch Manufacturing company which specializes in high altitude equipment for aircraft and where Scherer has been acting as director of research for the past several years. Mr. Scherer has been extended an indefinite leave of absence from the firm in order to devote his full efforts to his new assignment.

The National Research Defense committee, under chairmanship of President J. B. Conant of Harvard, is one of the units of the Office of Scientific Research and Development which was established by executive order of the president a little more than three years ago. Its purpose is to coordinate military and civilian scientists and laboratories, bringing their efforts to bear more effectively in developing new implements and methods of war.

Consulting Engineer
Before the war, Mr. Scherer acted as a consulting engineer on all types of pre-cooling cold storage and air condition systems and it was in this capacity that he served the North American Aviation company while they were installing "air-condition" at their plant in Dallas, Texas. At AResearch he was in charge of research and early production models of that company's all-aluminum intercooler—a device which raises the critical altitude of American bomber and fighter planes by cooling the hot air from the supercharger before it reaches the motor. More recently, in collaboration with N. A. C. A., he was responsible for the initial development of successful AResearch exhaust heat exchangers. This latter equipment is used for thermally anti-icing, cabin heating and flame suppression. Like the intercooler, it is now in mass production and being used in the major portion of the aircraft being built in this country.

To Produce Models
As chief of the engineering and transition office of the NDRC, Mr. Scherer's main responsibility will be to transform successful research projects into production models suitable for service testing and mass production. The work will require not only all the abilities Mr. Scherer has so well demonstrated at AResearch, but the closest cooperation with the engineering and production personnel of the nation and with all branches of the service.

Paul Scherer was a resident of Medford for many years.

MANY NEVER SUSPECT CAUSE OF BACKACHES

This Old Treatment Often Brings Happy Relief

Many sufferers relieve nagging backaches quickly, once they discover that the real cause of their trouble may be tired kidneys. The kidneys are Nature's chief way of taking the excess acids and waste out of the blood. They help most people pass about 1 1/2 pints a day. When disorder of kidney function permits poisonous matter to remain in your blood, it may cause nagging backache, rheumatic pains, leg pains, loss of pep and energy, getting up nights, swelling, puffiness under the eyes, headaches and dizziness. Frequent or crummy passages with smarting and burning sometimes shows there is something wrong with your kidneys or bladder.

Don't wait! Ask your druggist for Doan's Pills, used successfully by millions for over 40 years. They give happy relief and will help the 15 million of kidney troubles flush out poisonous waste from your blood. Get Doan's Pills.

living on his ranch near Table Rock which he still owns and where his family of six daughters were born. In addition to running his pear and filbert ranch he was for several years manager of the Southern Oregon Sales company.

McLeod

McLeod, Oct. 28 — Mr. and Mrs. Clarence Ring of Oakland, Calif., are visiting Mrs. Ring's father, Jim Casey, also the sister of Mr. Casey is spending a few days with him. She is also of Oakland.

Home Economics club of Upper Rogue Grange met at the home of Mrs. Caroline Harding Oct. 19. SMALLER CITIES TO BE ON VAST AERIAL NETWORK

Washington, Oct. 28 —(A.P.)—A nationwide aerial network routes extending beyond the 273 cities now served to thousands of smaller communities was forecast today by the Civil Aeronautics Board concluded its investigation of local air service.

Josh Lee, CAB member, said the hearings had produced a surprisingly vast amount of information from all groups interested in commercial aviation—the airlines, aircraft manufacturers, prospective applicants, inventors, and communities wanting air service.

"The local and feeder lines will be laid out and assigned to operators as soon as is humanly possible," he said.

All groups agreed that expansion of domestic aviation beyond the big-city system through new schedules, new routes, and probably a new kind of plane, is necessary if the United States is to maintain its lead in commercial aviation. CAB hopes to have the routes laid out and ready for operation immediately after the war to provide jobs for aviation-trained personnel, released from the armed services.

Prospect

Prospect, Oct. 27 — Miss Sharon Vanderwal was hostess for a farewell party, honoring her cousin, Robert Slagle, who is leaving for a marine training camp this week. Guests included Calleen Moore, Dorothy Dolenshek, Dorothy Sisk, Eva Fry, Jean Spencer, Nyoda Herman, Nadine Graham, Thelda Goode, Annabelle Willich, Robert Slagle, Wayne Downing, Leo Kelley, Joe Kelley, Max Middlebush, Donald Waggoner, and the hostess, Sharon Vanderwal.
