BUILDING BODIES
In the building of bodies the first essential is the building materials. Of these materials food should head the list. We can no more build normal bodies without the adequate supply of proper materials as furnished by foods than can a contractor build a structure that will endure without the proper kinds and quantities of materials. Water is also essential in body building. As the body is 75% water how can it function normally without an adequate supply of moisture? At least six to eight glasses should be supplied daily. Sunshine is important because of its vitalizing influence. And fresh air is a factor not to be overlooked as its oxidizing influence is necessary. Without these essentials strong bodies cannot be built. But even these essentials, in order to build strong healthy bodies must be subject to a normal circulation under the influence of normal nerve function.
