The Latest, Most Important Automobile Safety Feature

SAFETY-RIM WHEELS

EXCLUSIVE ON THE NEW PLYMOUTH, DODGE, DE SOTO AND CHRYSLER CARS

How Safety-Rim Wheels, standard equipment on the new Chrysler Corporation Cars, will give new added safety.

A sudden puncture or blowout—and even a new tire can flatten out like a pancake. The wheel may settle . . . the car list . . . the steering wheel jump from your hand. And the deflated tire and tube may turn crosswise, or pull off the rim, rolling away altogether and throwing your car out of control.

But you will have proven blowout protection when you ride in a 1946 Plymouth, Dodge, De Soto or Chrysler! Blowouts may still occur, of course—but they will be robbed of most of their danger.

An exclusive Chrysler Corporation feature, the Safety-Rim Wheel, makes it practically impossible for a flat tire to pull off, even at higher speeds. Because tire and tube remain in place, you slow to a safe, straight stop.

Solidly and tightly the tire stays on the rim. And because the tire does not slip crosswise to the wheel, there is less chance of ruining good rubber.

These Safety-Rim Wheels were put to the most grueling tests—dynamite caps were attached to cars' tires, exploded at 75 miles an hour! And the cars were brought to safe stops under control.

Safety has always been of utmost importance in the design of our cars. They brought you 4-Wheel Hydraulic Brakes, All-Steel Bodies, Safety-Glass—and, for 1946, the latest safety advance—SAFETY-RIM WHEELS.
