Tinted Eyeglasses Change Eye Colors

New York—(U.P.)—Now girls actually can "change" the color of their eyes, thanks to the latest development in invisible

Small plastic lenses that cover only the iris of the eye are made in different colors by Fluidless Contact Lenses, Inc. Blue eyes can be made to look brown or vice versa. Television personalities whose eyes are such a light shade they photograph badly have solved their problem with tinted contact lenses.

The plastic bits that cling to the eye have been getting smaller and smaller since the first contact lenses were developed. Tinted, iris-covering lenses and even tinier clear plastic lenses that cover only the pupil of the eye are the latest developments.

There is only one problem with changing eye shades. The tinted lenses covers the pupil too, so you'll be looking at the world through blue or brown-tinted glasses.

Horticulturist Advises On Care of Flowers

Madison, Wis.—(U.P.)—A University of Wisconsin horticulturist has some suggestions for making bouquets of flowers last longer.

Louis Berninger says the first rule is to keep cut flowers cool, but out of cold drafts.

The stems should be cut off an inch. Berninger says bacteria starts working on the bottom of the stems when flowers are put in water.

Then comes the warm water treatment. Berninger says flowers should be placed for about 30 minutes in water that's around 110 degrees. This will drive out any air bubbles.

To keep flowers looking fresh you can either cut an inch off the stems each day, or use a commercial preservative.

The purpose of both is to keep bacteria from plugging up the stems. One of the American Cancer Society's chief goals is to improve services to needy cancer patients.

Children's Drawing Show Regard for Mom

Carbondale, Ill.—(U.P.)—Just in case mothers had any doubts, they are the lights of their small children's lives.

Dr. Sina Mott, director of Southern Illinois University's nursery school kindergarten and nursery school, has checked up on how 4 and 5-year-olds feel about mama.

Dr. Mott analyzed 250 drawings made by the moppets as an assignment. She found the youngsters by-passed their favorite color—red—to show mother in sunny yellow . . . but only when she is shown with the family.

When mothers were shown alone or with the other member of the family, they were colored cold blue or purple. However, the little artists always placed themselves right next to mother in their pictures.

"He wants to make sure of absorbing a generous share of the warmth she radiates," Dr. Mott explained.

Another evidence of the esteem Junior has for mother: The youngsters took greater pains in drawing mothers than other family members. Sometimes they left out other family members but they never omitted mom.
