THAT'LL LEARN 'EM

Wishek, N. D.—(U.P.)—Wishek baseball fans had an old axiom pointed up to them forcefully—don't criticize unless you can do it better. The disgruntled fans, after watching their team drop every game in the Beaver Valley League, formed a team of their own and challenged their heroes. Final score: Wishek 18, Fans 1.

IT'S IN THE FAMILY

In Little Lesson 23, Training for Diabetes, for which send 25c free from stickum and stamped self-addressed envelope, at page 9 I cite the estimate of Dr. Elliot P. Joslin that 25 per cent of the entire population of the United States carry the potentiality or tendency to develop diabetes.

may pass the potentiality on to their children. Doctor Joslin, in my judgment the world's greatest authority, maintains that the inheritance of diabetes is not direct, but rather the potentiality or tendency to develop diabetes may be inherited. The child cannot inherit the diabetic potentiality alone if the other parent is not a carrier of the tendency. The child more often inherits the tendency from a grandparent. That is, the parents, one or both, carry the tendency in recessive form and do not necessarily develop diabetes.

Dr. J. D. McAulay
Author of Article

Ashland—Dr. J. D. McAulay, director of education at Southern Oregon college, is the author of "Released Time for Elementary School Teachers" which appeared in the September issue of the Peabody Journal of Education.

Released time as stated by Dr. McAulay, is meant a period of from 15 to 30 minutes a day between the hours of 8 and 4 when the teacher is free from all scheduled or required classroom tasks and is permitted to use that time in any professional matters she deems suitable.

The article reveals a very definite difference between principals and teachers concerning the meaning, use and organization of released time. Noticeable was the lack of rapport, cooperation and understanding between principals and teachers in this respect.

Sixty per cent of the teachers interviewed for the article would be satisfied with 15 minutes of freedom from the children during the day—preferably around 10 o'clock in the morning or around two in the afternoon.

YOUR BUICK DEALER

Now, having set Dr. Joslin up on his pedestal. I must say I think — whistle and groan — that's your best argument — he begs the question, this question: What good or bad feature, talent, characteristic, fault, peculiarity or defect is not subject to the same law or way of inheritance?

After all, diabetes is a functional deficiency—incapacity to metabolize, oxidize, utilize carbohydrate food (starch or sugar) as well or as promptly as physicians consider necessary for health.

Being a functional impairment it may occur on any level from occasional presence of sugar in the urine, with or without demonstrable increase of the amount of sugar in the blood (the blood of a healthy person always contains from 0.07 to 0.12 per cent sugar). If as much as 0.14 per cent is present several hours after a meal it warrants a tentative diagnosis of diabetes; if 0.16 per cent or more is present hours

after a meal it makes the diagnosis of diabetes almost certain, even if there is no sugar in the urine, though there is usually some sugar in the urine when the blood sugar is over 0.14 per cent. But mere presence of sugar in the urine does not necessarily indicate diabetes.

As Drs. Vorhaus, Williams and Waterman pointed out, people whose diet is mainly carbohydrate (refined white flour and refined white sugar particularly), often burdened with slacker flash and subject to general malaise, showing occasional presence of sugar in the urine with blood sugar) are likely to develop diabetes. Such persons need poor man's insulin. My name for vitamin B complex. To replace what is removed from wheat in the refining process. For further details send stamped, self-addressed envelope for pamphlet Wheat to Eat.
