The Medical Roundup

by Walter Alvarez

Emeritus Consultant in Medicine, Mayo Clinic
Emeritus Professor of Medicine, Mayo Foundation

Premature Infants

Recently, Dr. Ethel C. Dunham got out a second edition of her 459-page book on Premature Infants (Hoeber Harper). The subject is tremendously important because, in the United States, about half of the total deaths that come in the life and more than a third of all deaths that occur in the first year of life, are due to the premature birth of the child. Premature birth is one of the 10 leading causes of death among the whole population.

Walter Alvarez

Naturally, the first problem is, what to do to help the mother to carry her infant to term, and the second is, what to do to keep a 2 or 3 pound baby alive after he or she is born.

Today, the city health department that would like to lower its infant death-rate must grapple with these problems of premature birth. There are some mothers, many of them frail and underprivileged, who keep losing one premature child after another. Unfortunately, too little is known about the causes of premature birth, and too little is known about what can be done to help a mother to carry her child to term. Oftentimes, the infant is born with a number of physical imperfections that make it impossible for it to live. The older the mother is, between the ages of 43 and 50, the more likely she is to bear a child who cannot live.

One great difficulty with the premature infant is that its tissues are so delicate. They cannot stand up to the strains of life. Many premature children, also, have lungs which are defective, and cannot aerate the blood. For a while, it was thought that the answer to many of the problems was to keep the premature infant in an atmosphere rich in oxygen, but soon it was found that this can cause hopeless blindness. Fortunately, today, health officers, obstetricians and pediatricians are grappling with the problems of premature birth.

Dr. Alvarez regrets he hasn't the time in which to read or answer requests for information.

Instructions Listed For Blight Control

Instructions concerning blight control for pears was given today by C. B. Cordy, county horticultural agent. He said pears should be sprayed or dusted when 25 to 35 per cent of the blossoms are open.

Where blight has been a problem, Cordy said, ¾ pound Spracop or one-half pound of any other neutral copper should be used per 100 gallons of water. For a dust 25 pounds of three per cent copper dust should be used per acre. Application must be made only when trees are dry.

Where blight has not been a problem, Cordy said one pound of ziram per 100 gallons or seven pounds ziram per acre is recommended. This will be effective in scab control and will give some blight control and the spray does not cause russeting.

It should be repeated in from five to seven days if additional blight protection is desired.

Two sprays of streptomycin at a five-day interval has given good blight control and no russet, according to the agent.

Thailand Premier May Fly to Cambodia

Bangkok, Thailand — (U.P.) Premier Pibul Songgram announced today he may fly to the Cambodian capital of Pnom Penh for a friendship visit.

He said Thai-Cambodian relations are good and the Thai government is ready to join with Cambodia to clean up Cambodian rebels moving along the common border between the two countries.

Scholarship Winners To Be Named Soon

Winners of the National Merit Scholarships, about 400 of them throughout the United States, will not be announced until about May 1, it was reported today.

Winners of certificates of merit from the National Merit Scholarship Foundation were announced earlier this week, with 48 of them in Oregon. Of these, two were in Ashland and three in Grants Pass. There were more than 4,300 through the nation.

The top 15 per cent of high school senior classes were eligible to compete for the scholarships and merit certificates. Scholarship winners will receive funds ranging from a token $100 per year for four years, to full tuition and expenses, depending on need.

Yellowstone national park has about 100 geysers and about 300 non-eruptive hot springs as well.
