Chief Champlin Lists Six Points To Check Speeding

Charles P. Champlin, Medford police chief, has issued a reminder to motorists to keep a sensible rein on speed.

Champlin's reminder is in cooperation with the "Slow Down and Live" program of the National Conference of State Safety Coordinators.

In peaking of speed, he said during the first five months of 1956 there were 384 accidents within the city of Medford. Of this total, 84 were caused by excessive speed or because drivers did not have their cars under control. Of these 84 speed caused accidents, 62 of them resulted from following too closely.

Champlin gave six points as a guide to drivers in determining safe speeds.

They are: Drive at a speed that will enable stopping in the assured distance ahead; slow down before approaching curves and intersections; at night, drive at a speed which will allow stopping within headlight range; drive with traffic, a motorist may be going too fast if he is passing many cars, and too slow if many cars are passing; where children are playing, be able to stop in a car length or less; and when tired or inattentive, stop.

Power Company Planning to Rebuild Rock Slide Damage

Niagara Falls, N. Y. — (U.P.) The Niagara Mohawk Power Corp. planned Saturday to build new installations to replace those crushed by a giant rock slide in the gorge near the American Falls.

Charles J. Wick, administrative vice-president of the utility's western division announced the plans as crews worked to stop the flow of water into the one-third section of the Schoellkopf Power Station still standing.

Wick, who estimated damage at \$100 million, said the site of planned new generating units would depend on whether the remaining section can be repaired.

A thorough inspection of the section will not be possible, officials said, until the water is drained from it. Wick reported Friday that the generator floor was flooded by some 10 feet of water.

Still threatened with collapse on the cliff edge was a terminal building, which had served as a support for cables passing from generators in the wrecked station to the transformer station farther back from the gorge rim. It was abandoned and roped off as a precautionary measure.
