

Buried Treasure

by Pinkney Gage

Vertical or Horizontal Lines Add Stamp Value

Jack held up a square piece of manila paper with generous margins about an oval, vermilion-colored, two-cent stamp. "At first," he said, "I was going to toss this in a pile along with a lot of cheap duplicates, but then I noticed something peculiar about it. Do you?"

"I didn't. So far as I could see, the stamp was like any of thousands of others I had seen. A bust of Andrew Jackson facing to the left, and in the band about the oval the words U.S. POSTAGE TWO CENTS. On either side was the numeral 2 enclosed in a small circle.

"The design looks as if it might be a copy of the original one made by Reay when he refused to surrender his dies back in the 1870s," I said.

"It is," replied Jack, "but that alone doesn't mean much. . . . What about the paper? Does it suggest anything to you?"

I looked closely at the paper but could detect nothing to distinguish it in an outstanding way.

"Well, if you will notice," said Jack, "the lines in the paper itself are not on the diagonal, whereas those of practically all stamped envelopes put out in the last century were."

Jack replied, "I discovered that practically all newspaper wrappers sold by the government from 1860 to 1934, when they were discontinued, were made of laid paper in which the lines are either vertical or horizontal. Just like this."

"So what?" I asked. "So what does that mean?"

"That I am about \$100 richer than I thought I was," Jack said. "That's what it catalogues at. Of course, if it were unused, it would be worth \$200. But I won't kick."

OPAQUE WHITE GLASSWARE OFFERS BEST VALUES

Personally, I don't care for a table glassware that is of an opaque color. It doesn't look attractive. There is even something gross about it.

But no one should ever let that attitude blind him to the fact that many people feel so differently on the subject that some of the best values lie in glass of this type.

A case in point is that of milk white glass in which is known as the wheat pattern.

Just a few weeks ago I visited a store in which another customer was in the act of buying a pitcher, one in that very design. At least, that is the way it seemed to me. The deal had already progressed to the point where the man had some bills in his hands and was telling the clerk to wrap the pitcher up.

But he didn't buy it, as I discovered a few minutes later when I walked back along that same aisle on my way out. For there was the pitcher standing on the counter.

I picked the piece up and examined it carefully, thinking the other customer must have found some flaw.

There was none, though. Furthermore, the price, according to a tiny sticker on the bottom, was only \$14.50.

I handed the clerk the money and asked if he had any more pieces with the wheat design, which consists of a head of wheat in a shield panel.

"No," he said. "This is the only piece around here. That's what makes it so hard to sell."

At it happened, I couldn't hang onto the pitcher. A collector or friend of mine took it away from me for \$45 and thought she was very lucky.

BRITISH-MADE WASHINGTON COIN VALUE SMALL

The coin had been found in some shop on Cape Cod. No one in the family knew which one, nor even in what town. And there also was a disagreement as to when.

It was what is known as a Liverpool Halfpenny—a British coin put out in honor of President Washington and sold to merchants in America who found them quite acceptable to their customers as change.

The piece was an excellent example of its kind and in surprisingly good condition for one of the so-called Washington pieces of British origin that are generally badly worn.

I asked Charles, the head of the family, what they intended to do with it. Apparently the coin was communal property that was going into at least its third generation on the mantlepiece.

He looked at the bust of Washington on the obverse side over the date 1791.

"I don't know," he said. "For a time, we were going to have it set in the keystone of the fireplace. But if we did that, then we couldn't see the ship."

He turned the coin over. On the reverse was a three-master, under full sail, a ship of war apparently. Beneath it, near the lower edge of the coin, were crossed olive branches. The detail in which the ship was done, the rigging, the bellies of the sails, even the surrounding waves, was excellent.

I asked if they had ever considered selling it. He shook his head.

"We wouldn't do a thing like that," he said. "But one day, just for fun, I looked it up in a catalogue when I was in Boston. All it's worth is \$75 dollars."

(Released by McClure Newspaper Syndicate)
