

Cherries Remain On Inspection List

There are no inspection requirements on taking apples, peaches, pears, plums or other fruit available at this time into the state of California in small lots, according to C. B. Cordy, county horticulture agent.

Cordy pointed out that inspection requirements on cherries are still in effect.

Tourists buying other fruit in this area can take it through the quarantine station with no trouble and there are no inspection requirements on this end, he said.

AP Writer Released From Hungary Prison

Budapest, Hungary — (U.P.) — Endre Marton, Associated Press correspondent in Budapest was released from prison yesterday, it was officially announced.

Marton was sentenced by Communist Hungarian authorities to six years in prison for "espionage and plotting against the state."

Marton was fully pardoned a spokesman of the ministry of interior said.

Marton was arrested by Hungarian Communist police in February, 1955, but did not receive sentence until Jan. 14, 1956.

United Press Correspondent Ilona Nyilas, Marton's wife in private life, received a three-year prison term. She was released from prison earlier this year.

Most Cities Have Own Off-Street Parking

Chicago — (U.P.) — About 60 per cent of 1,137 cities of more than 10,000 population checked in a survey own and operate one or more off-street parking lots.

The figures were compiled as of late last year and were reported recently by International City Managers' Association. The number is up about four per cent over 1954.

Seventy-seven cities—20 fewer than in 1954—established municipal off-street parking lots for the first time in 1955.

But 249 other cities—31 more than in 1954—added lots to those already in service.

They'll Do It Every Time

Weather Expert Says Chicago 'Not Windy'

Chicago — (U.P.) — Chicago just doesn't live up to its nickname of "Windy City," a weather expert says.

Dr. Richard M. Page, psychologist and amateur climatologist, said Atlantic City, N.J., would be a better contender for the title, at least in midsummer.

In July, the windiest cities, in descending order of wind velocity, are Atlantic City, Oklahoma City, Okla.; New York; Wichita, Kan.; San Francisco; Amarillo, Tex.; Miami, Fla.; Cleveland; Boston, and Huron, S. D., Page said.

Chicago, despite its nickname, is 23rd in the list of 63 cities selected by the weather bureau as representative.

Page is the author of a book entitled "How to Pick the Right Climate." He also is the man who developed the concept of "thermidity," combining temperature and humidity to tell people how they actually will feel under various weather conditions.

Thermidity, he said, is subject to change by wind. The areas around Mobile, Ala., and Miami, Fla., benefit particularly from wind which reduces the thermidity, he said.

There are more than 5,000 4-H clubs in Michigan — tops in the nation.

Clement Lifts Self As Favorite Son Choice

Chicago — (U.P.) — Gov. Frank G. Clement of Tennessee today removed himself as the favorite son candidate of his state's delegation.

At his personal request, the 32-vote delegation rescinded an action earlier in the week in making the Democratic convention key-note its nominee.

Physicist Develops Wavelength Measure

Chicago — (U.P.) — A Northwestern University physicist has developed a new instrument which can measure objects in terms of light wavelengths to a precision of one part in 10 million.

The device may be used for measuring such objects as filaments or for studying optical corrosion.

The instrument uses corner-cube reflectors which send light back in the opposite direction from which it came. The reflectors are employed in a new type of interferometer, an instrument used for many years by physicists to measure light wavelengths by light interference phenomena.

The corner-cube interferometer was developed by Dr. Edson R. Peck, associate professor of physics.

Hells Canyon Project Stoppage Rejected

Washington — (U.P.) — Supreme Court Justice Hugo L. Black has refused to order the Idaho Power Co. to stop work temporarily on the Hells Canyon project in the Pacific Northwest.

The company was authorized by the Federal Power Commission last August to build three dams on the Snake river between Idaho and Oregon. A group of public power advocates took the issue to court. They favor a single high dam to be built by the federal government.

The controversy is now before the U.S. Court of Appeals here. The opposition, known as the National Hells Canyon Association, is trying to stop construction until the lawsuit is settled.

Officials Want Water Murky and Not Clear

Des Moines — (U.P.) — Officials at the water works aren't using muddled thinking when they say they prefer to get murky rather than clear water from the Raccoon River, source of the city's water.

They explained that when the water is clear the sun gets through and promotes the growth of algae called diatoms. These become large enough to plug the filters and make the job of processing the water more difficult.

But, according to M. K. Tenney, water works manager, diatoms don't grow as fast in clouded water. And, he added, the clearing and purification of muddy water is comparatively simple.

Mt. Angel, Ore. — (U.P.) — More than 7,000 persons, the largest crowd ever assembled here, made the annual Marian pilgrimage by candle light to the tiny Holy Rosary Catholic chapel 12 miles east of here Wednesday night.
