A welcome sight in this area the past few days has been the return of the robins and the meadowlarks, with their promise of spring "just around the corner." A stretch of "typical" California weather, unusually long and unusually cold, brought on a rash of frozen and broken water pipes and forced many local residents back to the days of primitive plumbing, and the almost-forgotten method of obtaining water by gathering snow, of which the supply was practically endless, and melting it on the stove. George Sloan, who is acting "water commissioner" during the illness of Harry Chapman, rates a pat on the back for his efforts in thawing out and repairing broken water mains, and keeping the water supply flowing.

While some were unhappy with the situation, most of the people took it in their stride, and recognized the fact that continuous days and nights of below freezing temperatures were bound to make water pipes freeze.
